Informatica

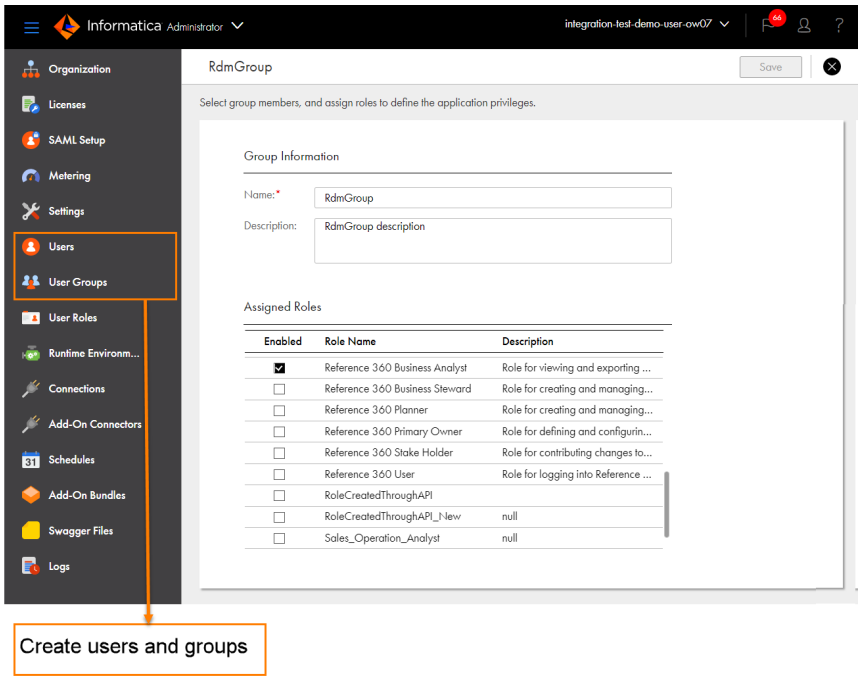

Reference 360 Quick Start

Create, manage, and govern your reference data in Reference 360. When you manage and govern your reference data, your organization improves the quality of reporting, compliance with regulations, and the trustworthiness of reference data.

Use this quick start to create your first reference data set and code lists, add code values to the code lists, and then create crosswalks to map equivalent code values.

Setup

Using Administrator:

1. Set up SAML or create users.
2. Assign Reference 360 roles to users.
3. Create groups.
4. Assign Reference 360 roles to groups.
5. Assign users to groups.

Learn how to create a user and create a user group. Also, learn how to enable SAML single sign-on.

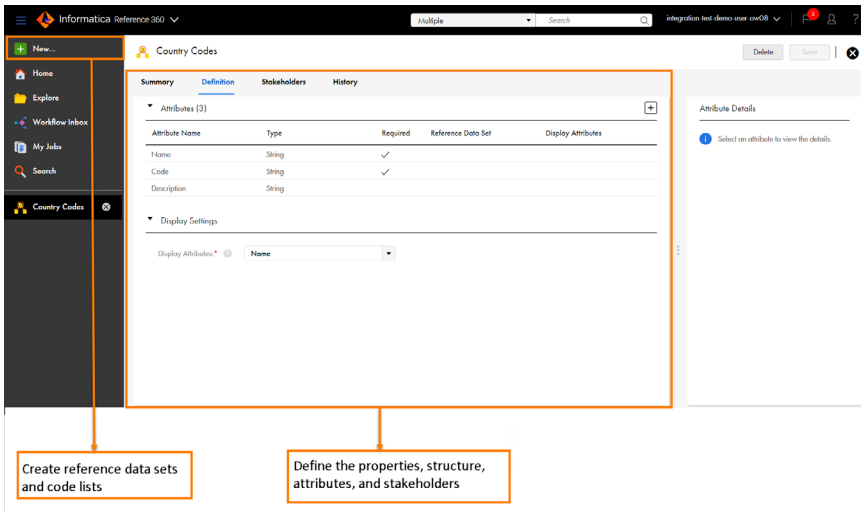

Using REST APIs:

1. Add metadata picklist values.

Learn how to add metadata picklist values.

Informatica

Define

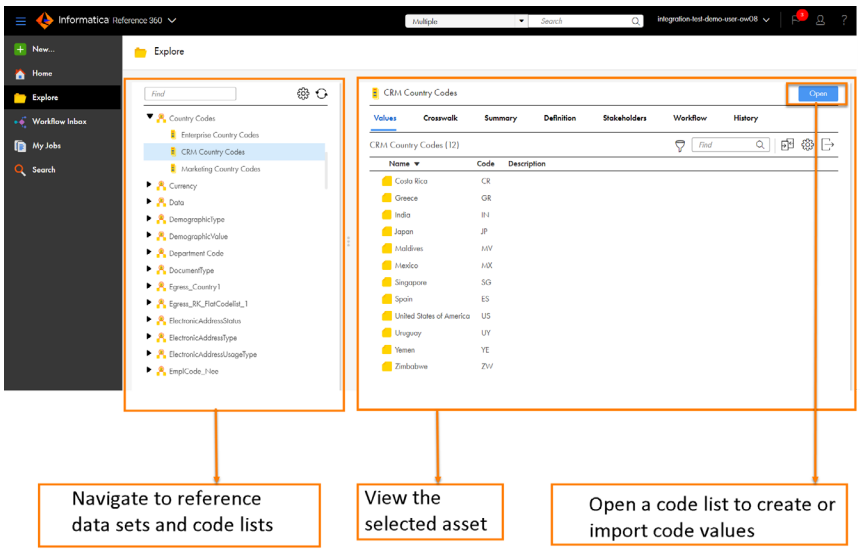

Using Reference 360:

1. Create reference data sets and configure their properties, structure, attributes, and stakeholders.
2. Create code lists and configure their properties, structure, attributes, and stakeholders.

For example, create a reference data set for Country Codes. In the Country Codes reference data set, create a CRM Country Codes code list and a Marketing Country Codes code list.

Learn how to create reference data sets and create code lists.

Manage

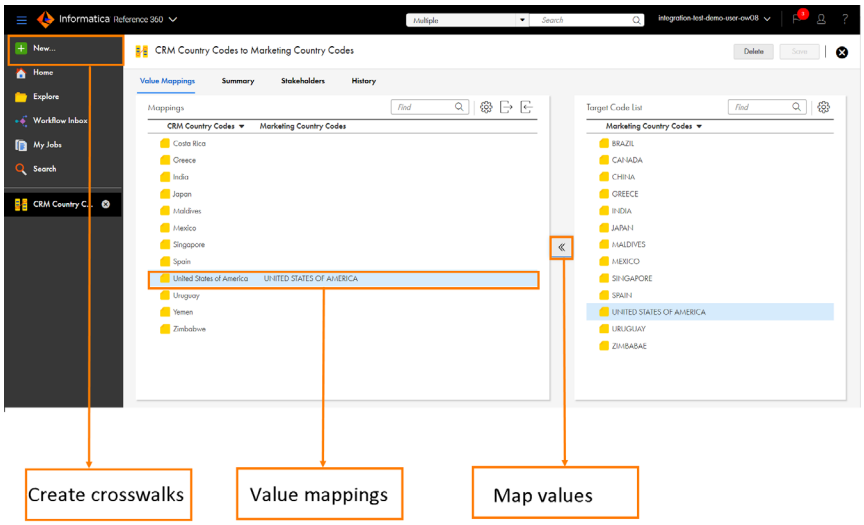

Using Reference 360:

1. Navigate to a code list.
2. Create or import code values into your code lists.

For example, in the CRM Country Codes Code List, create the United States of America code value. In the Marketing Country Code list, create the UNITED STATES OF AMERICA code value.

Learn how to manage code values.

Manage (Continued)

1. Create a crosswalk from one code list to another code list.
2. Create value mappings for code values that represent the same business term.

For example, create a crosswalk from the CRM Country Codes code list to the Marketing Country Codes code list. Map the United States of America code value to the UNITED STATES OF AMERICA code value .

Learn how to create a crosswalk and create value mappings.

Next Steps

1. Create additional reference data sets and code lists.
2. Create additional crosswalks and value mappings.
3. Create a hierarchy.
4. Propose changes to code lists and crosswalks.
5. Send drafts for approval.
