Service Status and Communications

Overview

Informatica's service health dashboard, Pulse, serves as a reliable source of information about the current state of Informatica® Intelligent Data Management Cloud™ (IDMC). You can access the dashboard online and subscribe to alerts so that you can be notified about events as soon as they occur.

Informatica aims to achieve a balance between transparency and alert fatigue by publishing information to Pulse only when events can be reasonably expected to cause downtime or affect how you use IDMC services. Events published to Pulse include, but are not limited to, emergency bug fixes, maintenance, and production incidents.

Informatica publishes upcoming release events to Pulse so you'll be aware of approaching upgrade windows. To help you plan for upgrades, you can follow individual services to personalize Pulse. For more information about IDMC releases, see Release Readiness.

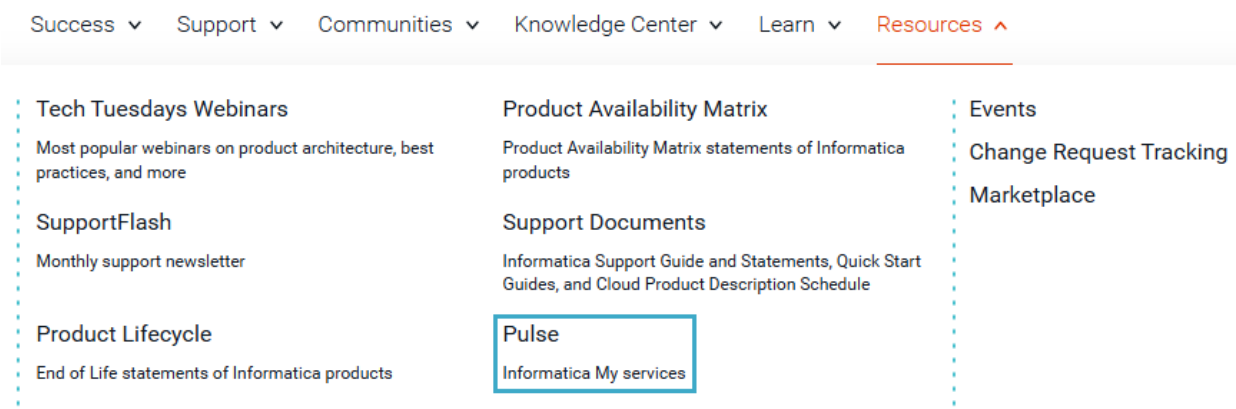

Informatica's commitment

Informatica's corporate values prioritize collaboration and accelerating outcomes in all products we deliver. Informatica believes in building and maintaining trust through active engagement. We will reach out to you for events that can be reasonably understood to cause downtime or impact your usage of IDMC services.

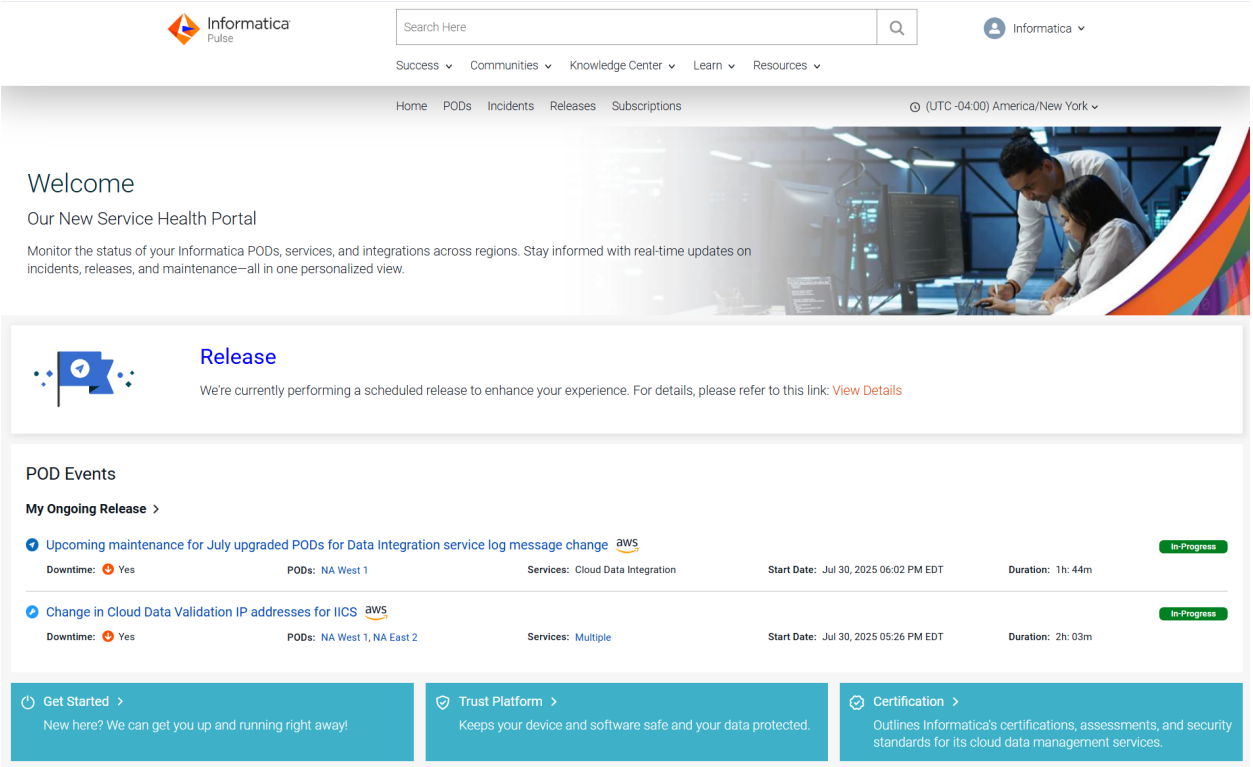

Navigating Pulse

Pulse shows the status of all PODs (Points of Deployment) and services across IDMC. Visit Pulse to check the status of your POD or a service on your POD, and to subscribe to alerts to get immediate notifications about maintenance, production incidents, and upcoming releases.

Find Pulse in the **Resources** menu on Informatica Network.

After you log in, the landing page shows information about the PODs and services you follow.

To identify PODs to follow, see POD Availability and Networking. You can also enter your organization ID in the search bar and Pulse will find the POD automatically.

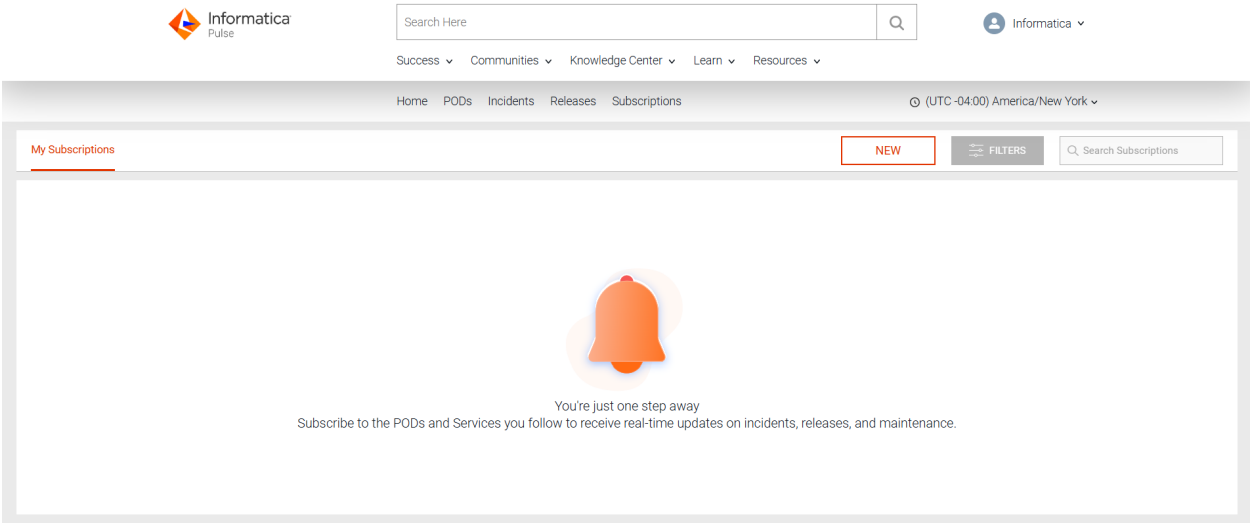

The following image shows the service impact indicators:

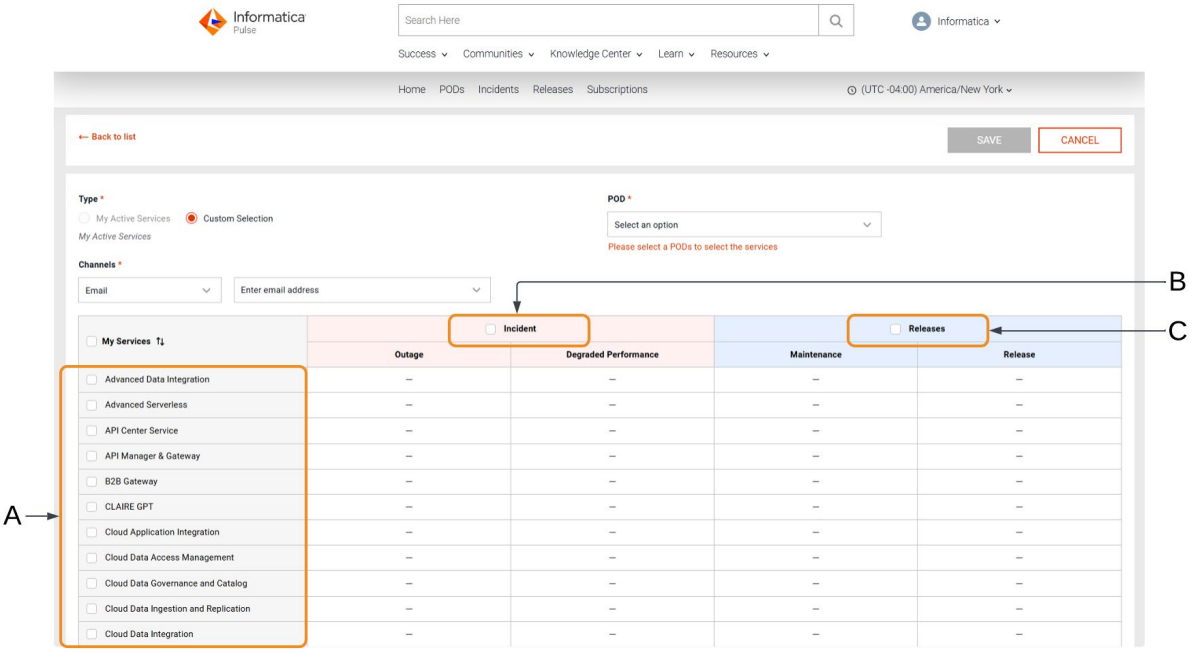

Subscribing to alerts

Subscribe to alerts in Pulse to get notifications about maintenance, incidents, and releases.

1. In **Pulse**, open the **Subscriptions** page.
2. Select **New** to create a subscription.

3. Select a POD.
4. Select a communication channel, such as email or webhook.
5. Select each service that you want to subscribe to and subscribe to incidents, releases, or both.

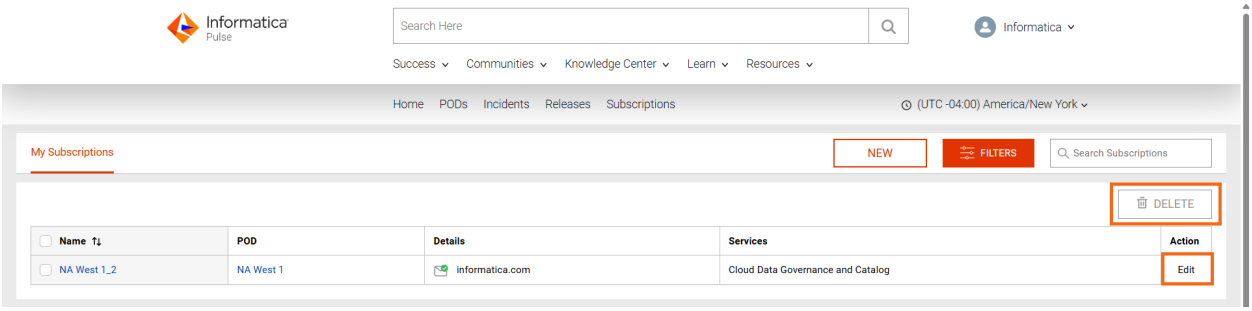

A. Select services.
B. Subscribe to incidents.
C. Subscribe to releases.

6. Click **Save**.

   Check your inbox for an email from Informatica asking you to confirm your subscription. When you confirm your subscription, your browser will bring you back to Pulse with a message stating that the subscription settings were updated.

To modify your subscription settings, return to the **Subscriptions** page and edit the subscription. To unsubscribe from Pulse notifications, select the subscription and select **Delete**.

Communications

Releases

Informatica includes up to four major releases for IDMC every year. You can find the proposed release schedule on Pulse. For each major release, Informatica publishes an alert to Pulse five business days before the upgrade starts.

For more information about IDMC releases, see Release Readiness.

Maintenance

Informatica engages in regular maintenance activities that are routine in nature and don't result in post-implementation issues. The team follows change management procedures to assess risk, impact, repetitive success metrics, and recommended communication actions.

Informatica publishes maintenance events to the **Releases** page in Pulse for both service maintenance and emergency maintenance. Service maintenance includes planned activities while emergency maintenance includes unplanned activities that require urgent attention.

Service maintenance

Service maintenance includes planned activities, such as scheduled updates and improvements, that might affect service availability or require action. If Informatica anticipates service maintenance to cause downtime or impact your usage of IDMC services, Informatica will publish an alert to Pulse five business days before service maintenance starts.

Emergency maintenance (including emergency bug fixes)

Emergency maintenance includes unplanned activities that require urgent attention, such as addressing a critical product issue or restoring service operation during an incident. If Informatica anticipates maintenance to affect service availability or require action, Informatica will notify you through Pulse. If Informatica prioritizes an accelerated development or deployment schedule, circumstances might require us to take immediate action and advance notice on Pulse might be minimal.

If there is an emergency bug fix (EBF), Informatica will inform you about a tentative deployment schedule through an existing support case. EBF deployments typically have no downtime and require no action. If a deployment might require downtime or present risks of further issues, Informatica might choose to provide a deployment schedule with consideration to your POD's local business hours (Monday to Friday 09:00 to 17:30) to minimize disruption.

Incidents

Informatica will alert you through Pulse if we assess an incident to have widespread impact or it can reasonably be assumed to have a risk of widespread impact to runtime services affecting a POD or region.

Informatica updates the status of the incident on Pulse throughout the lifecycle of the incident. While the incident is active, Informatica Global Customer Support might be unable to service individual cases for the ongoing incident. To receive direct updates about the incident, make sure you subscribe to Pulse alerts.

The following table describes how Informatica is working on the incident for each incident status:

Incident Status	Definition
Investigating	Informatica is aware of the problem and is working to understand the scope of the impact.
Restored	The immediate issue was remediated and Informatica continues to review metrics and indicators. An after-incident review has been initiated and Informatica is working on a Post Incident Report.
Closed	The incident has been confirmed to be resolved.

If Pulse isn't available, Informatica will publish incident updates using the banner on the Customer Portal.

Informatica provides a Post Incident Report for incidents that affect an entire POD or region. The Post Incident Report will be available on Pulse. For more information, see the Post Incident Reports section in this document.

Constrained incidents without widespread impact won't appear on Pulse. For more information about these incidents, contact Informatica Global Customer Support.

Security incidents and patches

Informatica prioritizes vulnerabilities and schedules remediation and mitigation according to the Informatica Security Vulnerability Patching Policy. For more information, see Informatica Cloud and Support Security Addendum.

Direct email communication

To complement Pulse alerts, Informatica can send critical notification alerts through email. Critical notifications are driven by technical factors and are not limited to notable behavior changes in a feature, an important administrative action item, or an approaching upgrade.

To enable critical notification alerts, update the notification settings for your user profile in your IDMC organization. To ensure that notifications remain relevant, critical event alerts are sent only to users who have logged in to their organization within the past 24 months. To continue receiving critical event alerts, log in to your organization to confirm your activity. Proactive and administrative alerts continue to be sent regardless of login activity.

For Data Marketplace and Data Governance and Catalog, Informatica provides upgrade schedule notifications by email. These are sent at the start of the flexible upgrade period to organization administrators and users with privileges to manage upgrades, and they contain the automatic upgrade date for your organization. To opt out of these notifications, go to the Notifications tab of your user settings, and clear the Critical Administrative Alerts check box in the Critical Notifications category.

For more information about managing user notifications, see Notifications categories and subcategories in the Administrator help. You can more read about Informatica's usage of your information in the Informatica Privacy Policy.

Post Incident Reports

A Post Incident Report describes Informatica's reactive actions during an incident and errors or experiences that impacted organizations have shared with us. The report explains the incident that occurred and the mitigative actions that Informatica is taking to prevent future occurrences.

After remediating an incident, Informatica begins an after-incident investigation. If the incident caused widespread impact that affected an entire POD or region, the preliminary findings and the Post Incident Report will be available on Pulse. Within five business days, Informatica will share its reviewed preliminary findings. Within 20 business days, Informatica will share a complete Post Incident Report. For information about incidents that don't meet these criteria and aren't posted on Pulse, contact Informatica Global Customer Support.

Providing feedback

We encourage you to provide feedback, ask questions, and report concerns regarding our communication practices. For any inquiries or feedback, contact Informatica Global Customer Support by opening a case on **Informatica Network**.

User communication practices

Informatica periodically reviews and updates our user communication practices to align with the evolving needs of our customers and operations. To view our current practices, you can find the latest version of this document on the **Documentation Portal**.
