Abstract

This article helps you configure the AWS Secrets Manager in the AWS Portal. Once configured, you can select the AWS Secrets Manager as a secrets manager in IDMC.

Supported Versions

- Intelligent Data Management Cloud July 2026

Table of Contents

Overview. 2
Verifying license in IDMC. 2
Creating AWS secret in AWS Management Console. 3

Overview

To use the AWS Secrets Manager in IDMC, you must first configure it in the AWS Management Console.

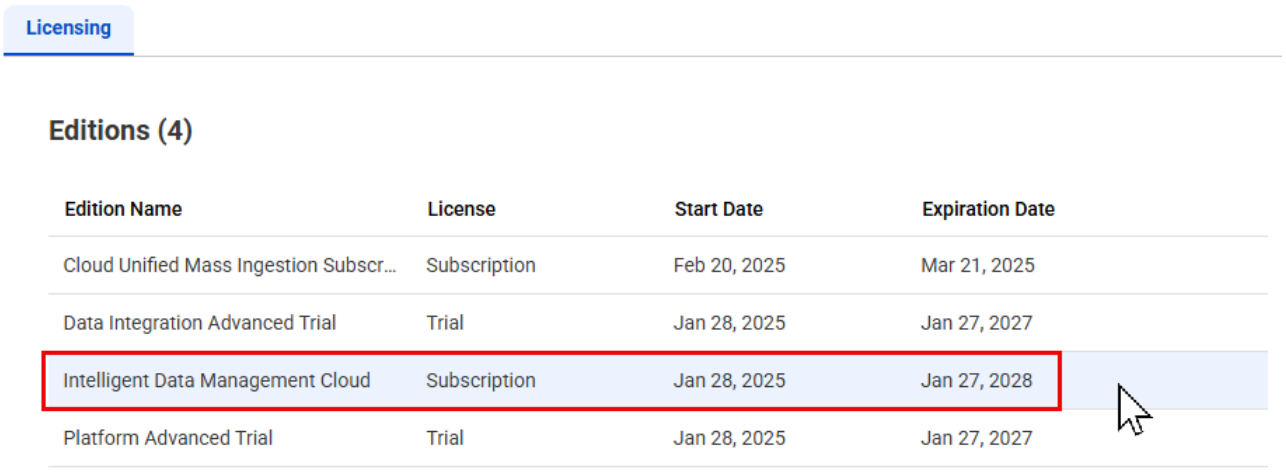

Complete the following tasks:

1. Verify your license in IDMC.
2. Create the AWS Secret in the AWS Management Console.

Verifying license in IDMC

You need a valid subscription to the Intelligent Data Management Cloud license to configure a secrets manager in IDMC.

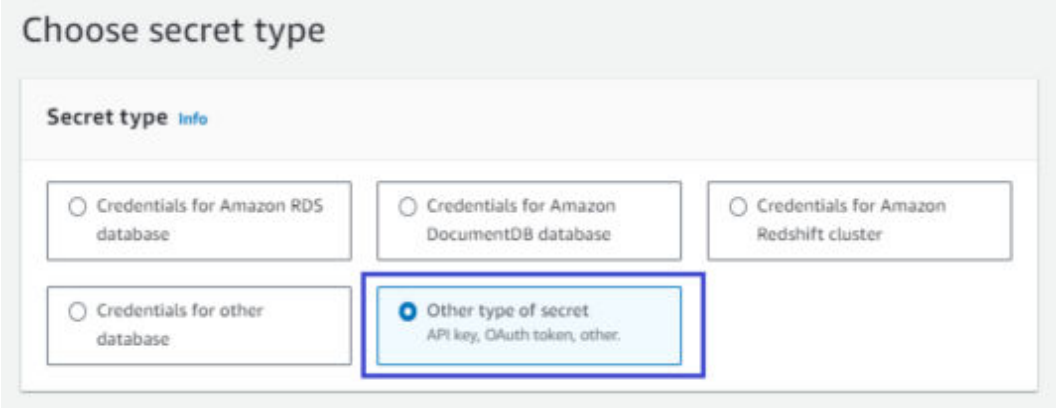

1. In Administrator, select **Licenses**.
2. In the Licensing tab, check that there is a subscription for **Intelligent Data Management Cloud**. The following image shows the required subscription:

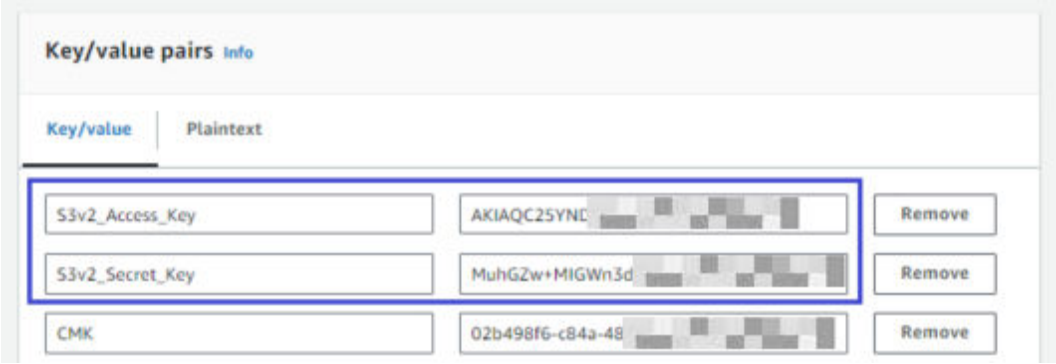

Creating AWS secret in AWS Management Console

Configure the Secrets Manager in the AWS Management Console.

1. Log in to the AWS Management Console and search for **Secrets Manager**.
2. Click **Store a new secret**.
3. Select **Other type of secret**. The following image shows this option selected:

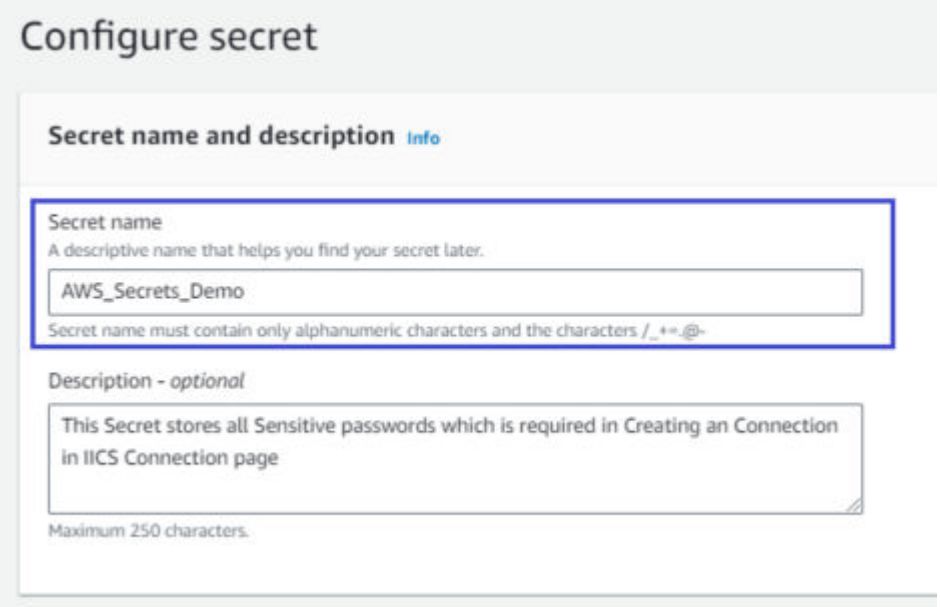

4. In the Key/value pairs section, provide a key/value pair with the secret key name and the password for the secret key name. The following image shows sample key/value entries:

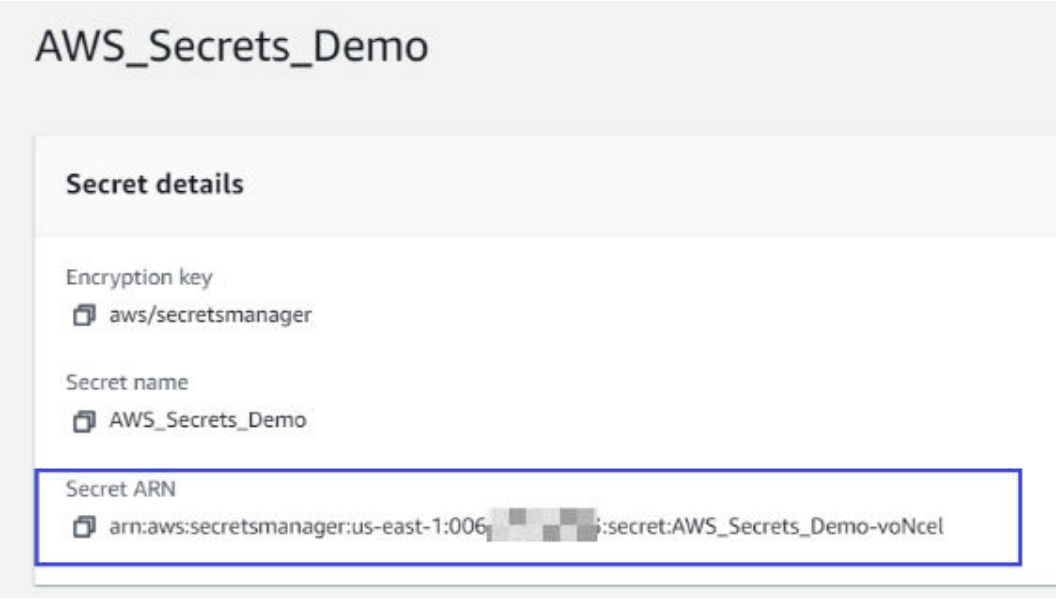

5. Click **Next**.

6. Enter a name for the secret and optionally a description. The following image shows the secret name and description:

7. Click **Next**.
8. Copy the **Secret ARN** from the secret details displayed. The following image shows the Secret ARN:

After you have set up the Secrets Manager in the AWS Management Console, follow AWS Secrets Manager configuration on the Informatica Documentation Portal for the remaining configuration steps.
