CHAPTER 1

October 2026

The October 2026 release of Operational Insights includes the following updates.

Changelog October 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
September 10, 2026	Initial publication	

Important notice and upcoming change

The October 2026 release of Operational Insights includes the following important notice and upcoming change.

Dropped support

Effective in the October 2026 release, Informatica drops support for Operational Insights data collection from PowerCenter 10.4.0 domains. Operational Insights no longer collects Domain Stats, Customer Service Management (CSM), and PowerCenter Jobs data from PowerCenter 10.4.0 domains. PowerCenter 10.4.0 reached end of support on March 31, 2024.

Changed behavior

The October 2026 release of Operational Insights includes the following changed behavior.

Time range limit for the Application Integration usage report

When you download the Application Integration usage report in Operational Insights, the time range between the start and end dates can't exceed 13 months. If you request a longer range, the request returns an error that explains the limit, so you know to shorten the range and download the report again.

Previously, a request for a range longer than 13 months returned a success response with no data, which made it unclear whether the limit or the data was the problem.

For more information, see *Operational Insights*.

For more information, see Operational Insights.

CHAPTER 2

April 2026

The April 2026 release of Operational Insights includes the following update.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
March 19, 2026	Initial publication	

New features and enhancements

The April 2026 release of Operational Insights includes the following new feature.

Ability to export Application Integration usage reports

You can now export Application Integration usage reports from Operational Insights using a GraphQL API. The exported data uses your current page filters and includes process start and end times in Coordinated Universal Time.

You can export the following types of reports:

- Reports related to API calls, processes, connections, and licensing for a period of one month
- A full job report that includes the usage details of all processes, guides, and OData executions for a period of up to 13 months

These reports help you assess the status and usage of your Application Integration assets and take appropriate corrective actions as needed.

For more information, see *Operational Insights*.

CHAPTER 3

October 2025

The October 2025 release of Operational Insights includes the following updates.

New features and enhancements

The October 2025 release of Operational Insights includes the following new feature.

New Scheduled filter for Data Ingestion and Replication jobs

You can now use the Scheduled filter on the **Data Ingestion and Replication** page to filter and view scheduled application or database ingestion and replication initial load jobs. This filter is available on both the Overview and All Jobs pages to help you easily check the schedule details and status of your jobs.

Changed behavior

The October 2025 release of Operational Insights includes the following changed behavior.

Simplified job details for streaming ingestion and replication jobs

The **Performance** tab, which previously displayed throughput graphs for source and target along with job performance metrics such as total messages and total kilobits of messages streamed per second is no longer included in the Job Details page for streaming ingestion and replication jobs.

You can refer to the **Overview** tab in the Job Details page to view the total number of events and related performance insights.

CHAPTER 4

July 2025

The July 2025 release of Operational Insights includes the following updates.

New features and enhancements

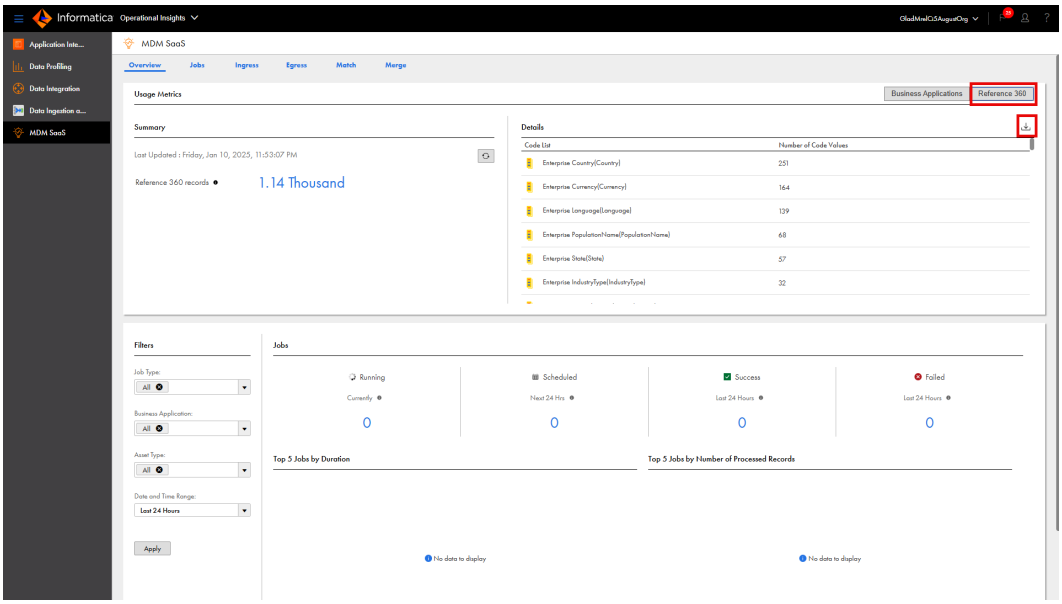

The July 2025 release of Operational Insights includes the following new feature and enhancement.

Usage statistics

You can now view the total number of code values in an organization and the number of code values in each code list. You can also download the metrics as a CSV file.

The Overview page displays the usage statistics of business applications and Reference 360 separately.

The following image shows the usage statistics of Reference 360:

For more information about the Reference 360 usage statistics, see Monitor usage statistics for Reference 360.

Changed behavior July 2025

The July 2025 release of Operational Insights includes the following changed behavior.

Master records count

The business applications statistics now includes the deleted master records in the master record count.

Previously, the master record count didn't include the deleted master records.

For more information about the usage statistics for business applications, see Monitor usage statistics for MDM SaaS.

CHAPTER 5

February 2025

The February 2025 release of Operational Insights includes the following updates.

Important notices

Informatica has modified the levels of customer support that it offers for one or more Operational Insights features in the current release. The following notice identifies the feature and the current support level.

Dropped support for Informatica domain versions earlier than 10.4.0

Effective in the February 2025 release, Informatica dropped support for Informatica domain versions earlier than 10.4.0.

CHAPTER 6

November 2024

The November 2024 release of Operational Insights includes the following updates.

New features and enhancements

The November 2024 release of Operational Insights includes the following new feature and enhancement.

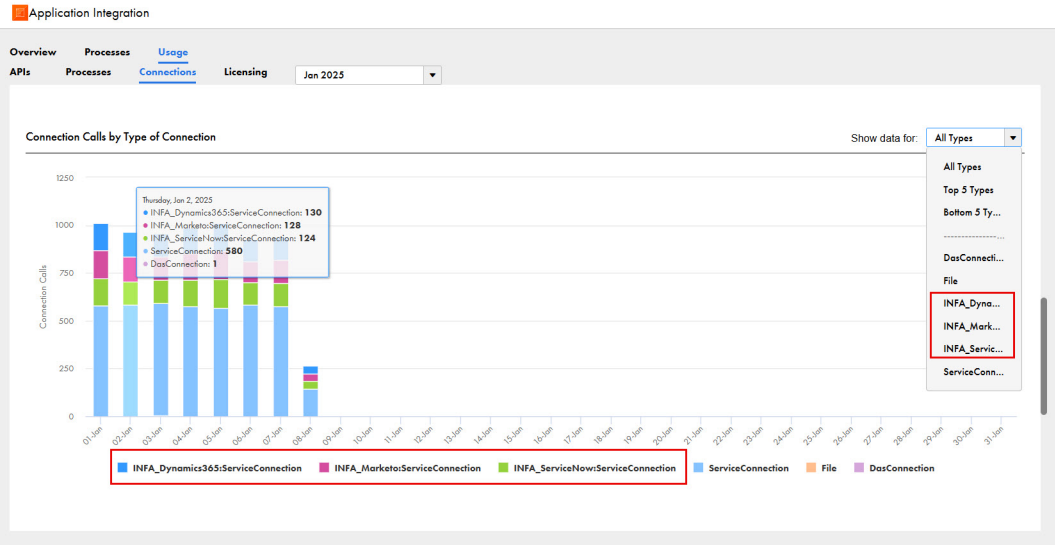

Application Integration connection names

Effective in the November 2024 release, in the **Connection Calls by Type of Connection** panel under the **Usage** tab, the connection names that use the newly added native connectors are displayed in the following format:

`INFA_<ServiceConnector>:ServiceConnection`

For example: `INFA_Dynamics365:ServiceConnection`

The following image shows the new naming format for the connection types:

Changed behavior

The November 2024 release of Operational Insights includes the following changed behavior.

Historical jobs panel

When you view the **Historical** panel for Data Integration jobs, depending on the number of jobs run in your organization, the page shows the total number of jobs and the total number of pages in the panel. If the total number of jobs takes more than 30 seconds to calculate, the panel does not display the number of jobs or the number of pages in the panel. All jobs will still be displayed on the panel.

Previously, the **Historical** panel did not display the total number of jobs or the number of pages in the panel.

CHAPTER 7

August 2024

The August 2024 release of Operational Insights includes the following update.

Changed behavior

The August 2024 release of Operational Insights includes the following changed behavior.

Historical jobs panel

When you view the **Historical** panel for Data Integration jobs, the page no longer lists the total number of jobs in your organization or the total number of pages in the panel.

Previously, the page displayed the total number of jobs and the total number of pages in the panel.

CHAPTER 8

July 2024

The July 2024 release of Operational Insights includes the following updates.

New features and enhancements

The July 2024 release of Operational Insights includes the following new feature and enhancement.

Mass Ingestion has a new name!

The Mass Ingestion service is now called *Data Ingestion and Replication* to reflect its full range of data replication, synchronization, and CDC capabilities and to better align with market perceptions of its functionality. Correspondingly, the task names and solution names have also changed:

New solution names

- Application Ingestion and Replication
- Database Ingestion and Replication
- File Ingestion and Replication
- Streaming Ingestion and Replication

New task names

- Application ingestion and replication task
- Database ingestion and replication task
- File ingestion and replication task
- Streaming ingestion and replication task

These name changes have been made throughout most of the user interface and documentation set. For example, the **Mass Ingestions** page in Operational Insights is now renamed to **Data Ingestion and Replication**. The **Overview** tab in the **Data Ingestion and Replication** page lists all types of ingestion jobs with the new task names. The **All Jobs** tab lists all the Data Ingestion and Replication jobs with the new task names. In the **Alerts** page, the **Mass Ingestion Alerts** tab is renamed to **Data Ingestion and Replication Alerts**.

CHAPTER 9

May 2024

The May 2024 release of IDMC Operational Insights includes the following updates.

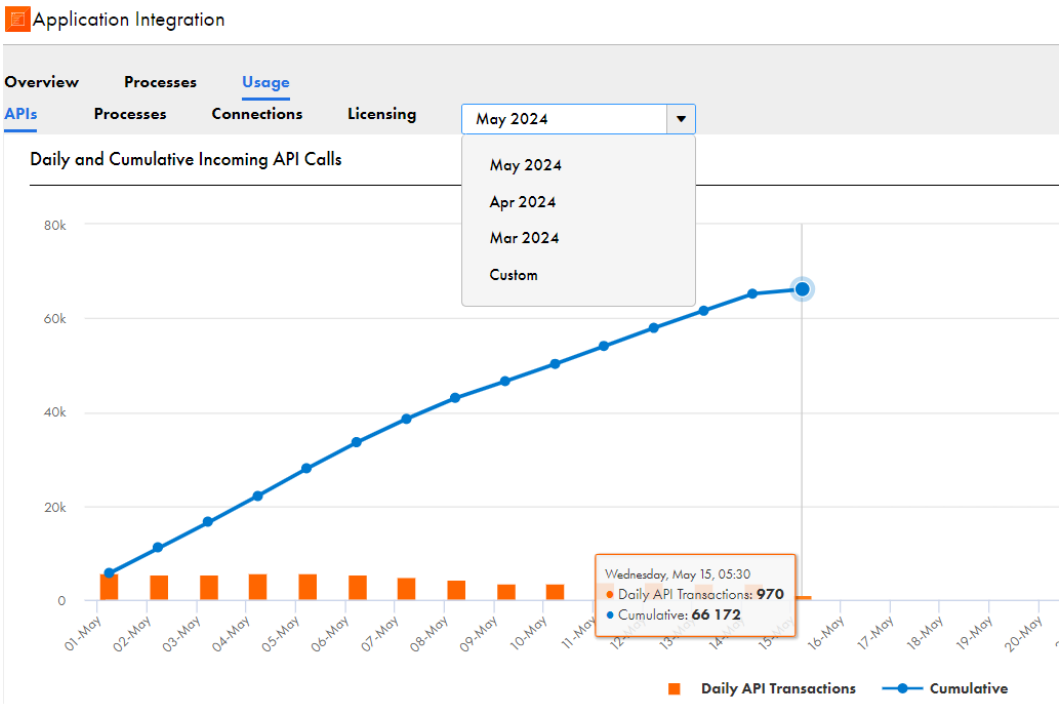

Changed behavior

Informatica Intelligent Cloud Services Operational Insights includes the following changed behavior in this release:

Application Integration reports

When you view reports for Application Integration, you can view analytics for the current month, one of the preceding 2 months, or a custom date range. If you select the **Custom** option, you can select a duration of 1 month in the past 13 months.

The following image shows a list where you can select these options:

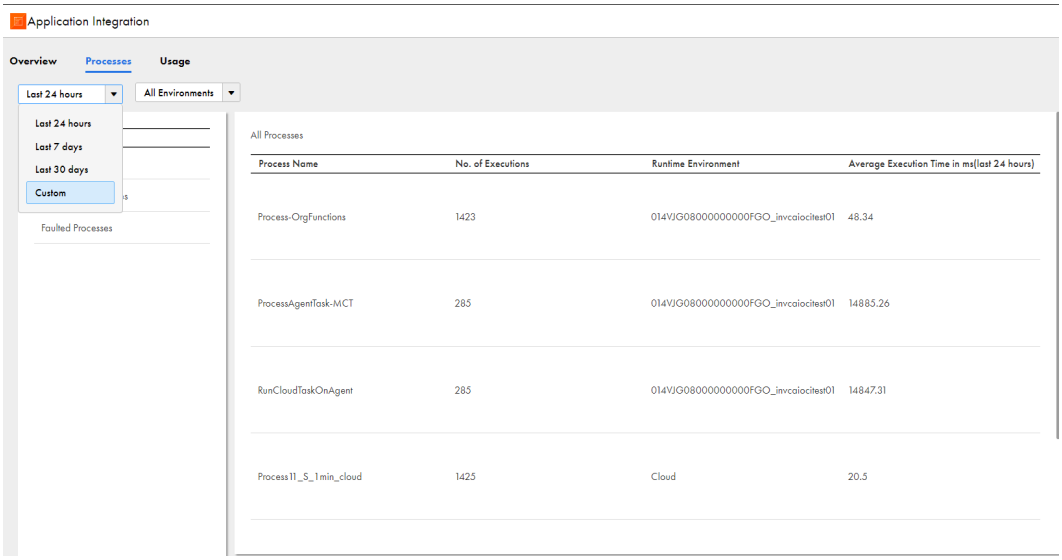

Previously, you could select the current month or one of the preceding 12 months.

Similarly, when you view process reports from the **Processes** tab on the **Application Integration** page, the **Last 3 months** time period option is replaced with the **Custom** time period option. You can view analytics for the following time periods:

- Last 24 hours
- Last 7 days
- Last 30 days
- Custom. You can select a duration of 1 month in the past 13 months.

The following image shows a list where you can select these options:

CHAPTER 10

Upgrade

The following topics provide information about tasks that you might need to perform before or after an upgrade of IDMC Operational Insights.

Post-upgrade tasks for the April 2024 release

Perform the following task after your organization is upgraded to the April 2024 release.

Re-create success alerts

For success alerts configured for Data Integration jobs before the upgrade, Operational Insights continues to send notifications after you disable the alerts. After the upgrade, re-create your success alerts so that Operational Insights does not continue to send notifications after you disable them.
