Read the *Release Notes* to learn about fixes and known issues for IDMC℠ Cloud Data Integration for PowerCenter (CDI-PC).

For important notices and information about new features and enhancements, see What's New.

For information about on-premises emergency bug fixes, restricted functionality, known issues, and bug fixes, see Informatica 10.5.10 Release Notes.

Fixed issues

The tables in this section describe recent fixed issues for CDI-PC. Not all releases include fixed issues.

October 2026 fixed issues

The following table describes October 2026 fixed issues:

Issue	Description
CDIPC-17950	When you tried to update a domain from the CDI-PC service page and if the operating system suspended the Listener Service due to external factors, the progress of the update task showed `in progress` for hours. The update status did not reflect the failure until the stage timeout expired. The disruptive external factors can be low system resource availability or an interruption from external process monitoring services.
CDIPC-17294	When the domain submitted metering increments, the submission failed because the payload contained a duplicate operation identifier. As a result, CDI-PC did not record domain usage metering data.
WB-9249, WB-9056, WB-9057	When you converted a PowerCenter mapping to Data Integration, the `GREATEST()` and `LEAST()` functions that are used in an expression were not converted and appeared as `undefined` in the Data Integration expression.

Issue	Description
WB-9200	When you converted assets that used a relational connector, such as Oracle or IBM DB2, as the source, the Output File Directory field configured as `$PMTargetFileDir` on a PowerCenter flat file target was not carried over to the converted Data Integration mapping. The field was left blank after conversion.
WB-9140	When you converted a workflow, the Expression transformation in the converted mapping failed validation because of stale or duplicate metadata entries. You might have observed an error similar to the following: `Operand [...] already exist. Use remove() or changeVariable() APIs.`
WB-9127	After you converted a workflow, the mapplet in the converted asset was invalid, and the page became unresponsive when you tried to synchronize the fields.
WB-9125	When you converted a workflow, mapping configuration tasks were converted as command tasks. In addition, the mapping configuration tasks and mappings were not converted, and some workflow conversion tasks failed.
WB-9058	After you converted assets, a date format variance appeared between the PowerCenter mapping and the converted Data Integration mapping, even though the resulting date format was valid in Data Integration.
WB-9027	When you converted a PowerCenter asset that contained sessions or mappings, the conversion could fail during publish if the source mapping contained an expression transformation and a target transformation that have the identical name, with the following error: `Error occurred during publish: Asset [...] not present in the repository [...]`
WB-9007	When you exported metadata for a bulk update task to update command tasks, the export template did not include the script name and input argument properties. Additionally, the script name appeared repeatedly in the command task input arguments after conversion.
WB-9004	When you converted workflow assets, the command task conversion did not handle the script name and input arguments correctly.
WB-9003	When you converted a workflow without repointing, the session assets were incorrectly converted as command tasks.
WB-8961	When you converted a workflow with a repointing configuration from ODBC to Microsoft SQL Server, the conversion failed at the *Repointing objects to new endpoints* step with the following error: `Failed while Repointing objects to new endpoints. Error occurred in repointing. Failed processing the PC XML Zip.`
WB-8960	When you ran a bulk update export of assets, the export failed with an HTTP status code 500 error while fetching the mapping configuration task structure if the number of assets is more than 88.
WB-8957	After conversion, the logic for a variable port in an Expression transformation was converted incorrectly. When the PowerCenter expression was written across multiple lines and included commented sections, the converted expression collapsed into a single line, which caused the remaining logic to be commented out.

Issue	Description
WB-8909	Conversion of a mapping that contained an SAP IDoc mapplet failed with a `500 Internal Server Error` and the error code `EXTMAPPLETS_044: Failed to create new mapplet`.
WB-8907	Conversion of a mapping that used an SAP IDoc mapplet failed with a `404 Not Found` error and the error code `EXTMAPPLETS_067` related to the SAP Table connector license.
WB-8860	When you converted assets, sessions were not published and the conversion failed with the following error: `Error occurred during publish: Rest Api exception occurred 403 Forbidden on GET request`
WB-8815	Conversion failed with a `NullPointerException` during the parse metadata phase, and the workflow file was skipped.
WB-8784	A PowerCenter repository assessment completed the main steps but failed during the dependency generation phase when processing the `LookupProcedure_SessionLevel.csv` file with the following error: `TypeError: join() argument must be str or bytes, not 'float'`

April 2026 fixed issues

The following table describes April 2026 fixed issues:

Issue	Description

WB-3928,
WB-3876
	When a conversion task contained a mapping that was already converted into a Data Integration mapping, the conversion job failed if there was any change in the mapping parameters. You might have observed one of the following errors:
	`403 Forbidden: Provide a parameter with following name and type`
	`500 Internal Server Error: Unable to load object - You do not have sufficient privileges or permissions to access the requested asset`

CDIPC-16064	When you migrated a non-TLS PowerCenter domain with HTTPS enabled for the Administrator tool, the UpdateDomainOptions command failed.

Known issues

The tables in this section describe known issues for CDI-PC. Not all monthly releases include known issues.

October 2026 known issues

The following table describes October 2026 known issues:

Issue	Description
CDIPC-19399	When you log in to Informatica Administrator (the Administrator tool) for a Kerberos domain that isn't registered with IDMC, the login fails.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
