Abstract

You can update an obsolete Cloud Data Integration for PowerCenter (CDI-PC) domain to the latest available version. Follow the instructions in this article to learn how to apply an update to an obsolete domain.

Supported Versions

- Cloud Data Integration for PowerCenter (CDI-PC) October 2024

Table of Contents

Overview. 2
Updating the domain in command-line mode. 2
Rolling back an update. 3
Updating the domain in console mode. 4
Updating the domain in graphical mode. 4

Overview

If a CDI-PC domain is not updated by its designated due date, it is considered obsolete.

A CDI-PC domain update can include new features, security patches, and EBFs. Updates might be mandatory or optional. Some updates can be applied only if the domain is on a specific version or above.

Domains that you don't update by the due date are marked obsolete and offline. An obsolete status indicates that the domain is on an outdated version. You can't run jobs or perform tasks on an obsolete domain. You can't schedule an update for an obsolete domain.

You can update an obsolete domain in one of the following ways:

- To update to an immediate previous version (n-1) of an obsolete domain, use the **Update Domain** page on the CDI-PC **Home** page.
- To update to older versions (prior to n-1), use the CDI-PC installer. You can run the CDI-PC installer in command-line, console, or graphical mode to update an obsolete CDI-PC domain.

Updating the domain in command-line mode

You can run the CDI-PC installer in command-line mode to update an obsolete domain on Linux or Windows.

On a shell command line, run the `install.sh` file to update on Linux or `install.bat` to update on Windows. The command has the following options:

- **--uid**. User install directory
- **--ops**. Operation to be performed by the script. You can `Apply` or `Rollback` an update.
- **--comp**. Component to be selected. Choose from `Cloud`, `Thirdparty`, or `Platform`, or choose `All` the three options.
- **--reqid**. Request ID for logging, tracking, or processing the update request

Updating on Linux

Run the `install.sh` file in the following sequence:

1. Apply Cloud component. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Apply --comp=Cloud --reqid=1234`
2. Apply third-party component. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Apply --comp=Thirdparty --reqid=1234`
3. Apply platform component. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Apply --comp=Platform --reqid=1234`
4. You can also apply all the components at once. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Apply --comp=ALL --reqid=1234`

Updating on Windows

Run the `install.bat file` in the following sequence:

1. Apply Cloud component. `install.bat "--uid=C:\CDI-PC" "--ops=Apply" "--comp=Cloud" "-reqid=1234"`
2. Apply third-party component. `install.bat "--uid=C:\CDI-PC" "--ops=Apply" "--comp=Thirdparty" "-reqid=1234"`
3. Apply platform component. `install.bat "--uid=C:\CDI-PC" "--ops=Apply" "--comp=Platform" "-reqid=1234"`
4. You can also apply all the components at once. `install.bat "--uid=C:\CDI-PC" "--ops=Apply" "--comp=All" "-reqid=1234"`

After the update is complete, the obsolete domain is updated to the latest version. If any step fails, roll back to the previous version.

Rolling back an update

You can run the CDI-PC installer in command-line mode to roll back a failed update.

On a shell command line, run the `install.sh` file to roll back on Linux and `install.bat` to roll back on Windows. The command has the following options:

- **--uid**. User install directory
- **--ops**. Use `Rollback` to rollback a failed update.
- **--comp**. Component to be selected. Choose from `Cloud`, `Thirdparty`, or `Platform`, or choose `All` the three options.
- **--reqid**. Request ID for logging, tracking, or processing the update request.

Rolling back on Linux

Run the `install.sh` file in the following sequence:

1. Apply platform component. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Rollback --comp=Platform --reqid=1234`
2. Apply third-party component. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Rollback --comp=Thirdparty --reqid=1234`
3. Apply Cloud component. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Rollback --comp=Cloud --reqid=1234`

4. You can also apply all the components at once. `sh install.sh --uid=/home/user/CDI-PC/Informatica/platform --ops=Rollback --comp=ALL --reqid=1234`

Rolling back on Windows

Run the `install.bat file` file in the following sequence:

1. Apply platform component. `install.bat "--uid=C:\CDI-PC" "--ops=Rollback" "--comp=Platform" "-reqid=1234"`
2. Apply third-party component. `install.bat "--uid=C:\CDI-PC" "--ops=Rollback" "--comp=Thirdparty" "-reqid=1234"`
3. Apply Cloud component. `install.bat "--uid=C:\CDI-PC" "--ops=Rollback" "--comp=Cloud" "-reqid=1234"`
4. You can also apply all the components at once. `install.bat "--uid=C:\CDI-PC" "--ops=Rollback" "--comp=All" "-reqid=1234"`

Updating the domain in console mode

You can run the CDI-PC installer in console mode to update an obsolete domain.

1. Log in to the machine with a system user account.
2. Clear the DISPLAY variable on the machine.
3. On a shell command line, run the install.sh file.
   - Press **1** to install CDI-PC. Default is 1.
   - Press **2** to migrate an existing Informatica PowerCenter domain to a CDI-PC domain.
4. Press **Enter** to run the Cloud Data Integration for PowerCenter (CDI-PC) installer.

   The **Welcome** section appears.
5. Read the copyright information and press **Enter** to continue.

   The prerequisites section displays the installation requirements.
6. Verify that all requirements are met before you continue the installation and press **Enter** to continue.

   The **Informatica services installation directory** section appears.
7. Enter the current Informatica installation directory.

   A warning message about the obsolete domain appears.
   You can choose to either change the Informatica installation directory or continue with the domain updates.
8. Press **2** to continue with the domain update.

   When the update completes, the summary page appears with the migration status, log file, and domain information.

   A migration log file is generated in the following location: `<CDI-PC installation directory>/Informatica`

After the update is complete, update the `INFA_HOME`, `INFA_NODE_NAME`, and `INFA_DOMAINS_FILE` variables to match the new settings specific to the CDI-PC domain.

See the Domain Updates help.

Updating the domain in graphical mode

You can run the CDI-PC installer in graphical mode to update an obsolete domain.

1. Log in to the machine with a system user account.

2. Close all the other applications.
3. Go to the root of the directory for the installation files and run `install.bat` as administrator.

   To run the file as administrator, right-click the `install.bat` file and select **Run as administrator**.

   Note: If you do not run the installer as administrator, the Windows system administrator might encounter issues when accessing files in the CDI-PC installation directory.

   The CDI-PC page appears.
4. Select **Migrate to CDI-PC**, and click **Start**.

   The **Welcome** page appears.
5. Read the copyright information and click **Next** to continue.

   The **Migration Prerequisites** page displays the installation requirements. Verify that all requirements are met before you continue the update.
6. Click **Next**.

   The **Informatica services installation directory** page appears.
7. Enter the current Informatica installation directory.

   A warning message about the obsolete domain appears.
8. Click **OK** to continue with the domain updates

   The **Pre-migration Summary** page appears.
9. Verify the details and click **Install**.

   When the migration completes, the **Post-migration Summary** page appears with the migration status, log file, and domain information.

   A migration log file is generated in the following location: `<CDI-PC installation directory>/Informatica`

See the Domain Updates help.
