Read the *Data Integration Connector Release Notes* to learn about fixed and known issues for Data Integration connectors.

For information about Data Integration issues, see the *Data Integration Release Notes*.

For information about new features and enhancements in Data Integration, see the *Data Integration What's New*.

For information about new features and enhancements in Data Integration Connectors, see the *Data Integration Connector What's New*.

Connector and connectivity issues

Read the following pages to learn about fixed issues, known limitations, and third-party limitations that apply to connectors that you can use in your service. Consider the following guidelines for the release notes:

- If a connector has known or fixed issues for your service, you will find it in the following pages even if the connector is not updated in the current release.
- If a connector does not have any notable known or fixed issues for your service, you will not find it in the following pages.
- The (month, year) value in each issue description indicates the release in which the issue was fixed or reported.

Amplitude Connector

Known issues

The following table describes known issues:

Issue	Description
CCI-7395	When you read fractional numeric data, Data Integration imports the fields as double or decimal data type with a default scale of 0. As a result, the fractional values are rounded off. Workaround: On the fields page, manually convert double fields to the decimal data type and specify the required precision and scale. For decimal fields, manually update the precision and scale. (October 2026)

Business 360 FEP Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
MDMN-211976	When you run a mapping that uses Business 360 FEP Connector and creates a target table at runtime, the mapping incorrectly adds NOT NULL constraints to columns for optional source fields. Rows that contain null values for those fields fail to load. (October 2026)
MDMN-178716	When you run a mapping task that uses a Business 360 FEP connection, the mapping task runs successfully but incorrectly displays the connection details from the log file as error messages. (October 2025)

Issue	Description
MDMN-160284	When you import an existing mapping within a hierarchy to a target organization and run the mapping, the mapping fails with the following error: `The schemas of the source table and target table do not match. Verify that the schemas match, synchronize the fields, and run the mapping again.` (February 2025)
MDMN-144495	When you export hierarchies and relationships by using Business 360 FEP Connector, the egress job might fail at the stage step with the following error: `Invalid JSON input: Unexpected character` (February 2025)
MDMN-153393	When you configure multiple partitions in a Source transformation to export a large number of records, the mapping task uses only a single partition to process data during the extract step. (November 2024)
MDMN-144372	When you export source records that contain validation errors, the exported data doesn't include the source systems of the field groups. The issue occurs only when the preview feature for validation errors is enabled in your organization. (October 2024)
MDMN-121918	When you run mappings that use a Business 360 FEP connection, the mappings might fail intermittently with the following error: `java.net.MalformedURLException: no protocol: null/metadata` (May 2024)
MDMN-123482	When you export hierarchies and relationships that belong to a specific source system by using Business FEP Connector, the egress job exports hierarchies and relationships from all the source systems. (April 2024)
MDMN-65782	In a target transformation, if you specify a hierarchy and one or more relationships within the hierarchy as multiple target objects in a single mapping, the mapping fails. (November 2023)
MDMN-65803	When you specify a relationship as the target object in a mapping, the connector catalog displays only the GUID values of the relationships instead of the display names. When you export these mappings, the GUID values change and prevent you from reusing the mapping. (October 2023)
MDMN-110788	If a single mapping contains a hierarchy and relationships within the hierarchy as target objects, the mapping runs successfully but doesn't write any data to the target objects. (August 2023)
MDMN-110787	In a target transformation, if you specify relationships as multiple target objects, the mapping runs successfully for the first target object but fails for the rest. (August 2023)
MDMN-112219	When you use a Business 360 FEP connection to ingress a large number of records, the processing time is significantly high. (July 2023)

Issue	Description
MDMN-97751	In a target transformation, if you map the sourcePkey field that contains special characters to the target field, the target transformation fails. (July 2023)
MDMN-96083	When you map multiple targets to multiple target objects using a Business 360 FEP connector that uses a proxy-enabled Secure Agent, the mapping runs successfully even though the data doesn't get written to any of the target objects. (July 2023)
MDMN-60298	When you map two targets to two different business entities, the mapping runs successfully but writes all the data to one of the business entities and fails to write data to the other business entity. (July 2023)

Databricks Connector

Third-party known issues

The following table describes third-party known issues:

Issue	Description
CCON-111787	When you use the Databricks JDBC driver version 2.7.5, you cannot configure an unauthenticated proxy. (April 2026) Databricks ticket number: 00838573

Google BigQuery V2 Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CBDM-38003	When you run a mapping configured with SQL ELT mode that contains a Joiner, Lookup, or Normalizer transformation connected to another Normalizer transformation, the mapping fails with the following error: `An error occurred during mapping translation: Internal error.` (April 2026)

Google Cloud Storage V2 Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-93048	You can't prevent partial data upload to a Google Cloud Storage target location when a mapping fails at run time. (April 2026)

JDBC V2 Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CBDM-39940	Although a mapping in advanced mode runs successfully, a NullPointerException stack trace is logged in the driver logs. (October 2026)

Klaviyo Connector

Known issues

The following table describes known issues:

Issue	Description
CCI-7395	When you read fractional numeric data, Data Integration imports the fields as the decimal data type with a default scale of 0. As a result, the fractional values are rounded off. Workaround: On the fields page, manually specify the required precision and scale. (October 2026)

Microsoft Azure Data Lake Storage Gen2 Connector

Known issues

The following table describes known issues:

Issue	Description
CBDM-39280	When you use the **None** format type to read Gzip compressed files, the mapping fails with the following error: `The compression format [Gzip] is not valid.` (October 2025)

Third-party known issues

The following table describes third-party known issues:

Issue	Description
CCON-108575	When you configure Managed Identity authentication to connect to Microsoft Azure Data Lake Storage Gen2 and run multiple pipelines or write to multiple targets using Iceberg or Delta file formats, the mapping might fail with the following error: `Temporarily throttled, too many requests` (October 2025) Apache ticket number:14039

Microsoft Fabric Data Warehouse Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-114240	When you run concurrent mapping tasks in a taskflow that update the same Microsoft Fabric Data Warehouse table, a failed task incorrectly reports a successful status. (October 2026)
CCON-108634	When you run multiple mappings concurrently to write to a Microsoft Fabric Data Warehouse target, the mappings fail with the following error: `MD Refresh Response code:400` (April 2026)

Known issues

The following table describes the known issues in this release:

Jira	Description
CCON-115105	When you run a stored procedure in an SQL Transformation with Microsoft Fabric Data Warehouse Connector, the mapping fails with the following column name error if the result set contains column names that differ from the output parameter names: `TRANSF_1_1_1> FABRICDW_10000 ... The column name out_val is not valid` (October 2026)
CCON-115067	When you run a mapping that includes a SQL Transformation with Bit data type columns, the mapping fails at run time with the following type conversion error: `[ERROR] java.lang.ClassCastException: java.lang.String cannot be cast to java.lang.Integer` (October 2026)

Microsoft Fabric Lakehouse Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-112353	When you run a mapping that uses a parameterized and schema-enabled Microsoft Fabric Lakehouse connection, the mapping uses the schema from the imported object instead of the schema specified in the parameter file. (October 2026)

Microsoft SQL Server CDC Connector

Known issues

The following table describes known issues:

Issue	Description
PWXCLD-295	The Microsoft SQL Server CDC mapping task fails with the following error for a table or columns with special characters in their names: `Internal error. The DTM process terminated unexpectedly. Contact Informatica Global Customer Support.` (April 2025)

Mixpanel Connector

Known issues

The following table describes known issues:

Issue	Description
CCI-7299	When you configure a Mixpanel object as the Source transformation in a mapping, the mapping ignores dynamic keys, such as variable dates or event names, along with any data nested within them. (October 2026)
CCI-7395	When you read fractional numeric data, Data Integration imports the fields as the decimal data type with a default scale of 0. As a result, the fractional values are rounded off. Workaround: On the fields page, manually specify the required precision and scale. (October 2026)

MongoDB V2 Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-111732	When you run a CDC mapping task configured with the **Stop on Errors** session property and perform bulk operations on a MongoDB V2 target, the mapping task doesn't execute operations in sequence. The task also writes incorrect data to the target. (October 2026)

ODBC Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-105131	When you use the Teradata subtype in an ODBC connection and run a mapping enabled with SQL ELT optimization, you can't perform update and delete operations if the NOT NULL columns in the target table are unmapped. (April 2026)

Open Table Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-108605	When you read from an Apache Iceberg table that has deleted or updated rows history, the mapping stops responding, and the session log displays the following error: `[ERROR] java.lang.NoClassDefFoundError: org/roaringbitmap/longlong/Roaring64Bitmap` (April 2026)

Known issues

The following table describes known issues:

Issue	Description
CCON-111700	When you create a target object at run time to write data to Apache Iceberg tables managed by the AWS Glue catalog, or run a mapping with dynamic schema handling with alter and apply changes enabled, the mapping fails if the incoming field names are not in lowercase. (April 2026)

PostgreSQL Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-110584	When an input field of the UUID data type is mapped to an `in` or `inout` UUID parameter in a stored procedure in an SQL transformation, the mapping fails at run time with the following error: `[FATAL] Postgres Stored Procedure [insert_order_with_params] call failed with error\: [informatica][PostgreSQL JDBC Driver][PostgreSQL]procedure cloud.insert_order_with_params(unknown, character, unknown) does not exist. No procedure matches the given name and argument types. You might need to add explicit type casts.` (October 2026)

SAP BW Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-108161	When an SAP BW mapping contains an InfoObject configured with custom fields using the **Add Field** option in the SAP system, the **Fields** tab for the SAP BW source doesn't list all the fields available for the mapping. (April 2026)

SAP OData V4 Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-109140	When you run an SAP OData V4 mapping that reads data from flat entities in SAP Datasphere applications, the mapping might fail with the following error in the session log: `401 Unauthorised error` (April 2026)
CCON-108436	An SAP OData V4 mapping that uses a proxy server to connect to SAP Datasphere fails to fetch the object metadata at design time. (April 2026)

SAP Table Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
CCON-110178	Data corruption might occur in the target when you write data to an SAP table. (April 2026)

SurveyMonkey Connector

Known issues

The following table describes known issues:

Issue	Description
CCI-7395	When you read fractional numeric data, Data Integration imports the fields as double or decimal data type with a default scale of 0. As a result, the fractional values are rounded off. Workaround: On the fields page, manually convert double fields to the decimal data type and specify the required precision and scale. For decimal fields, manually update the precision and scale. (October 2026)

Xero Connector

Known issues

The following table describes known issues:

Issue	Description
CCI-7395	When you read fractional numeric data, Data Integration imports the fields as double or decimal data type with a default scale of 0. As a result, the fractional values are rounded off. Workaround: On the fields page, manually convert double fields to the decimal data type and specify the required precision and scale. For decimal fields, manually update the precision and scale. (October 2026)
