NOTICES

This Informatica product (the "Software") includes certain drivers (the "DataDirect Drivers") from DataDirect Technologies, an operating company of Progress Software Corporation ("DataDirect") which are subject to the following terms and conditions:

1. THE DATADIRECT DRIVERS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT.
2. IN NO EVENT WILL DATADIRECT OR ITS THIRD PARTY SUPPLIERS BE LIABLE TO THE END-USER CUSTOMER FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES ARISING OUT OF THE USE OF THE ODBC DRIVERS, WHETHER OR NOT INFORMED OF THE POSSIBILITIES OF DAMAGES IN ADVANCE. THESE LIMITATIONS APPLY TO ALL CAUSES OF ACTION, INCLUDING, WITHOUT LIMITATION, BREACH OF CONTRACT, BREACH OF WARRANTY, NEGLIGENCE, STRICT LIABILITY, MISREPRESENTATION AND OTHER TORTS.

The information in this documentation is subject to change without notice. If you find any problems in this documentation, report them to us at infa_documentation@informatica.com.

Informatica products are warranted according to the terms and conditions of the agreements under which they are provided. INFORMATICA PROVIDES THE INFORMATION IN THIS DOCUMENT "AS IS" WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING WITHOUT ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND ANY WARRANTY OR CONDITION OF NON-INFRINGEMENT.

Preface

Use Stripe Connector to learn how to read from Stripe by using Cloud Data Integration. Learn to create a Stripe connection, develop and run mappings, mapping tasks, and data transfer tasks in Cloud Data Integration.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Intelligent Cloud Services web site

You can access the Informatica Intelligent Cloud Services web site at http://www.informatica.com/cloud. This site contains information about Informatica Cloud integration services.

Informatica Intelligent Cloud Services Communities

Use the Informatica Intelligent Cloud Services Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the Informatica Intelligent Cloud Services Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

Informatica Intelligent Cloud Services Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Data Integration connector documentation

You can access documentation for Data Integration Connectors at the Documentation Portal. To explore the Documentation Portal, visit https://docs.informatica.com.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Intelligent Cloud Services Trust Center

The Informatica Intelligent Cloud Services Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the Informatica Intelligent Cloud Services Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Cloud Services Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all Informatica Intelligent Cloud Services components. Subscribing to all components is the best way to be certain you never miss an update.

To subscribe, on the Informatica Intelligent Cloud Services Status page, click **SUBSCRIBE TO UPDATES**. You can choose to receive notifications sent as emails, SMS text messages, webhooks, RSS feeds, or any combination of the four.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introduction to Stripe Connector

You can use Stripe Connector to connect to Stripe from Data Integration. Use Stripe Connector to read data from Stripe.

You can use Stripe objects as sources in mappings, mapping tasks, and data transfer tasks.

Stripe Connector assets

Create assets in Data Integration to integrate data using Stripe Connector.

When you use Stripe Connector, you can include the following Data Integration assets:

- Data transfer task
- Mapping
- Mapping task

For more information about configuring assets and transformations, see *Mappings*, *Transformations*, and *Tasks* in the Data Integration documentation.

Stripe source objects

When you select a Stripe connection for a Source transformation in a mapping to read data from Stripe, you can select an object from a list of available Stripe objects displayed in the object list.

The following table lists the Stripe source objects that you can use and their corresponding API resource path from where you can read data:

Objects	API resource path
Checkout sessions	https://api.stripe.com/v1/checkout/sessions
Country specs	https://api.stripe.com/v1/country_specs
Coupons	https://api.stripe.com/v1/coupons
Credit notes	https://api.stripe.com/v1/credit_notes

Objects	API resource path
Customer portal	https://api.stripe.com/v1/billing_portal/configurations
Customers	https://api.stripe.com/v1/customers
Events	https://api.stripe.com/v1/events
File links	https://api.stripe.com/v1/file_links
Files	https://api.stripe.com/v1/files
Invoice items	https://api.stripe.com/v1/invoiceitems
Invoices	https://api.stripe.com/v1/invoices
Payment intents	https://api.stripe.com/v1/payment_intents
Payment links	https://api.stripe.com/v1/payment_links
Plans	https://api.stripe.com/v1/plans
Prices	https://api.stripe.com/v1/prices
Products	https://api.stripe.com/v1/products
Promotion codes	https://api.stripe.com/v1/promotion_codes
Quotes	https://api.stripe.com/v1/quotes
Report runs	https://api.stripe.com/v1/reporting/report_runs
Report types	https://api.stripe.com/v1/reporting/report_types
Setup intents	https://api.stripe.com/v1/setup_intents
Shipping rates	https://api.stripe.com/v1/shipping_rates
Skus	https://api.stripe.com/v1/skus
Subscription	https://api.stripe.com/v1/subscriptions
Subscription schedules	https://api.stripe.com/v1/subscription_schedules
Tax codes	https://api.stripe.com/v1/tax_codes
Tax rates	https://api.stripe.com/v1/tax_rates
Test clocks	https://api.stripe.com/v1/test_helpers/test_clocks
Value list	https://api.stripe.com/v1/radar/value_lists
Verification sessions	https://api.stripe.com/v1/identity/verification_sessions

CHAPTER 2

Stripe connections

Create a Stripe connection to read data from Stripe.

You create a Stripe connection on the **Connections** page. Use the connection when you create mappings, mapping tasks, and data transfer tasks.

Connect to Stripe

Let's configure a Stripe connection to read data from Stripe.

Before you begin

Before you configure the connection properties, you'll need to get the account ID and secret key from your Stripe account.

The following video shows you how to get the information you need:

Connection details

The following table describes the basic connection properties:

Property	Description
Connection Name	Name of the connection. Each connection name must be unique within the organization. Connection names can contain alphanumeric characters, spaces, and the following special characters: _ . + -, Maximum length is 255 characters.
Description	Description of the connection. Maximum length is 4000 characters.

Property	Description
Use Secret Vault	Stores sensitive credentials for this connection in the secrets manager that is configured for your organization. This property appears only if secrets manager is set up for your organization. When you enable the secret vault in the connection, you can select which credentials that the Secure Agent retrieves from the secrets manager. If you don't enable this option, the credentials are stored in the repository or on a local Secure Agent, depending on how your organization is configured. **Note:** If you're using this connection to apply data access policies through pushdown or proxy services, you cannot use the Secret Vault configuration option. For information about how to configure and use a secrets manager, see "Secrets manager configuration" in the Administrator help.
Runtime Environment	The name of the runtime environment where you want to run tasks. Specify a Secure Agent or Hosted Agent. For more information about how to configure and use the runtime environments, see *Runtime Environments* in the Administrator help.
Account ID	The ID of your Stripe account.
Secret Key	The secret key to authenticate access and make requests to the APIs on the Stripe server.

CHAPTER 3

Mappings and mapping tasks with Stripe Connector

Use the Data Integration Mapping Designer to create a mapping. When you create a mapping, you configure a source to represent a Stripe object.

Describe the flow of data from source and target along with the required transformations before the agent writes data to the target. When you create a mapping task, select the mapping that you want to use. Use the Mapping Task wizard to create a mapping task. Validate and run the mapping to read data from sources and write to a target. The mapping task processes data based on the data flow logic you define in the mapping.

Stripe sources in mappings

To read data from Stripe, configure a Stripe object as the Source transformation in a mapping.

Specify the name and description of the Stripe source. Configure the source and advanced properties for the source object.

The following table describes the source properties that you can configure for a Stripe source:

Property	Description
Connection	Name of the source connection. You can select an existing connection, create a new connection, or define parameter values for the source connection property. If you want to overwrite the source connection properties at runtime, select the **Allow parameter to be overridden at run time** option. Specify the parameter file directory and name in the advanced session properties.
Source Type	Type of the source object. Select one of the following source types: - Single Object - Parameter Default is **Single Object**.

Property	Description
Parameter	A parameter file where you define values that you want to update without having to edit the task. Select an existing parameter for the source object or click **New Parameter** to define a new parameter for the source object. The **Parameter** property appears only if you select parameter as the source type. If you want to overwrite the parameter at runtime, select the **Allow parameter to be overridden at run time** option. When the task runs, the Secure Agent uses the parameters from the file that you specify in the advanced session properties.
Object	Name of the Stripe source object based on the selected source type. Select the source object for a single source.

The following table describes the advanced source properties that you can configure for a Stripe source:

Property	Description
Tracing Level	Determines the amount of detail that appears in the log file. Select one of the following options: - Terse - Normal - Verbose Initialization - Verbose Data Default is **Normal**.

CHAPTER 4

Data type reference

Data Integration uses the following data types in mappings, mapping tasks, and data transfer tasks with Stripe:

Stripe native data types

Stripe data types appear in the Source transformation when you choose to edit metadata for the fields.

Transformation data types

Set of data types that appear in the transformations. They are internal data types based on ANSI SQL-92 generic data types, which the Secure Agent uses to move data across platforms. Transformation data types appear in all transformations in a mapping.

When Data Integration reads source data, it converts the native data types to the comparable transformation data types before transforming the data.

Stripe and transformation data types

The following table lists the Stripe data types that Data Integration supports and the corresponding transformation data types:

Stripe Data Type	Transformation Data Type	Description
Boolean	Integer	Precision 10, Scale 0
Double	Double	Precision 15, scale 0
Float	Double	Precision 15, scale 0
Integer	Integer	Precision 10, scale 0
String	String	1 to 104,857,600 characters Default precision is 4000
Timestamp	Date/Time	Jan 1, 0001 A.D. to Dec 31, 9999 A.D (precision to the milliseconds)
