Abstract

The current Informatica Intelligent Cloud Services release offers many source control features such as checking in and checking out assets. You can check out and check in a single asset or multiple assets in one action. This article focuses on the check in and check out of single assets.

Once an organization is set up for GitHub version management, the first step is to make an asset source-controlled. To do this, you check in the asset. Once an asset is checked in, users can check it out to make changes to the asset.

Supported Versions

- Intelligent Cloud Services Spring 2020 April

Checking In an Asset. 2
Checking Out an Asset. 4

Checking In an Asset

In this scenario, a project contains a mapping. You want to check in the mapping to make it source-controlled, and then check it out to make changes to the mapping.

1. On the **Explore** page in Data Integration, right click the mapping. Choose **Check In**.

   The **Check In** dialog box pops up asking you to enter a summary and description. The following image shows the **Check In** dialog:

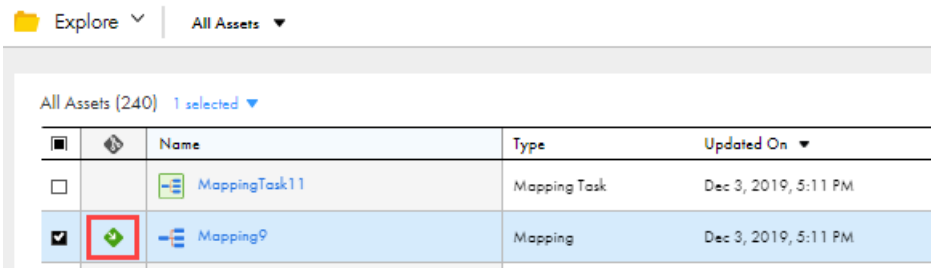

2. Enter a summary and description, and click **OK**.

   Once you click OK, the asset is checked in and available in GitHub.

3. To check whether the object is now source-controlled, perform one of the following actions:

   - On the **Explore** page, verify that you can see the Checked In icon for the asset.
     The following image shows an asset with a checked in icon:

   - Switch to the Monitor service and open the **Source Control Logs** page. Verify that you can see the Check In action, as shown in the following image:

     - Optionally, click **Check In**. A summary dialog pops up which displays details about the checked in asset with the Git Hash and asset details as shown in the following image:

4. Log in to GitHub. In the GitHub repository, you should see an entry for the mapping and the project, as shown in the following image:

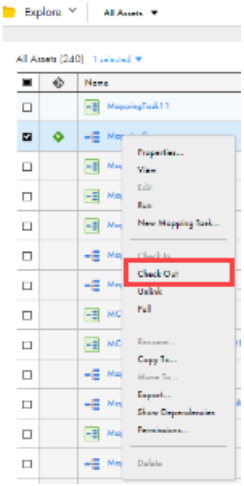

Checking Out an Asset

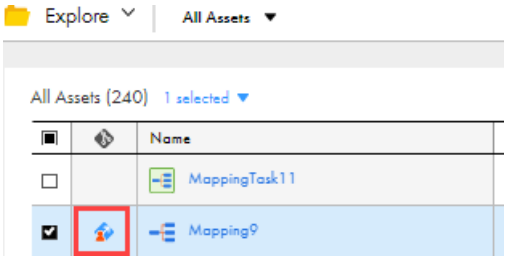

To make changes to the asset that is checked in, check out the asset.

1. On the **Explore** page, right-click an asset and select **Check Out**.

   The following image shows the Actions menu for an asset:

   The asset is checked out. The source control icon for the asset changes to the Checked Out by Me icon as shown in the following image:

2. You can use the Monitor service to verify the check out. Switch to the Monitor service and open the **Source Control Logs** page.

   A Check Out action is listed as shown in the following image:
