Abstract

This article explains the differences between deleting and unlinking an asset in an Informatica Intelligent Cloud Services organization that uses a GitHub source control repository.

In a source-controlled organization, deleting an asset in Informatica Intelligent Cloud Services deletes the asset from both Informatica Intelligent Cloud Services and the GitHub repository. Unlinking an asset removes the link between Informatica Intelligent Cloud Services and GitHub so that the asset is no longer source-controlled.

Supported Versions

- Intelligent Cloud Services Spring 2020 April

Table of Contents

Scenario 1: Deleting a mapping and its dependencies from a source-controlled organization. 2

Scenario 2: Unlinking a mapping and mapping task from a source-controlled organization. 5

Scenario 1: Deleting a mapping and its dependencies from a source-controlled organization

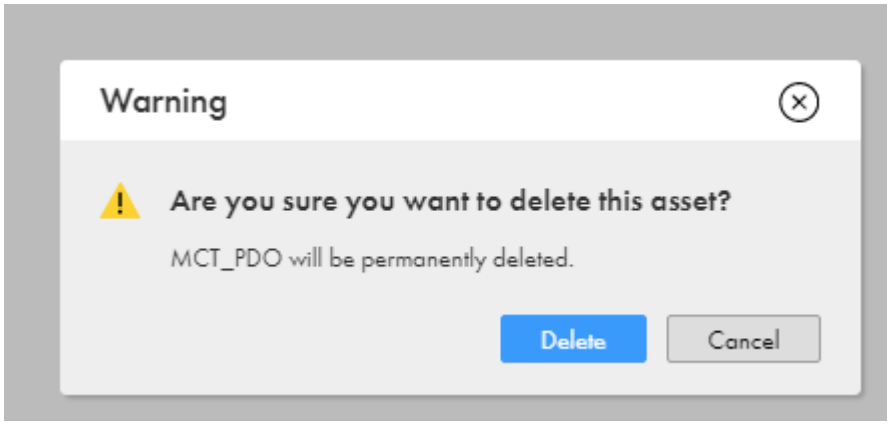

In this scenario, a mapping is used by a mapping task. Both assets are currently checked into a source-controlled organization.

1. On the **Explore** page in Data Integration, select the mapping and mapping task. Click **Actions** and select **Check Out** to check out both assets as shown in the image below.

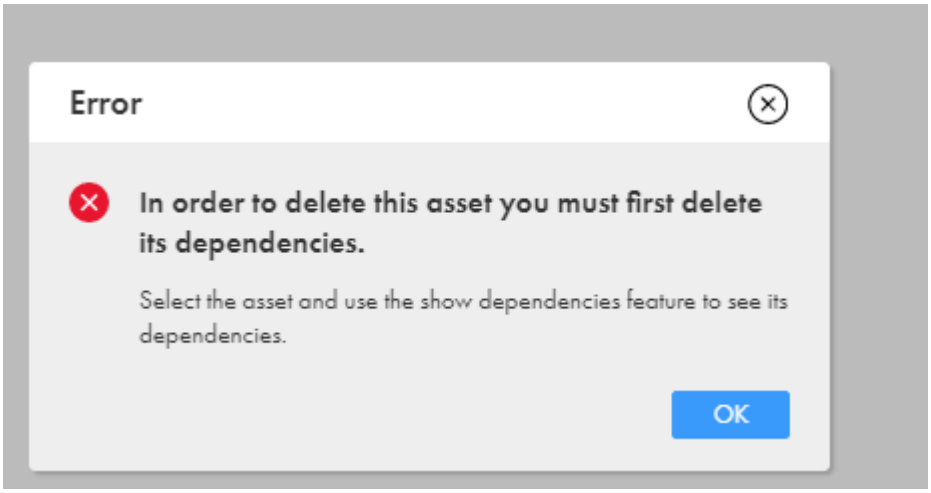

2. Right click the mapping task and select **Delete**.

   The following warning appears:

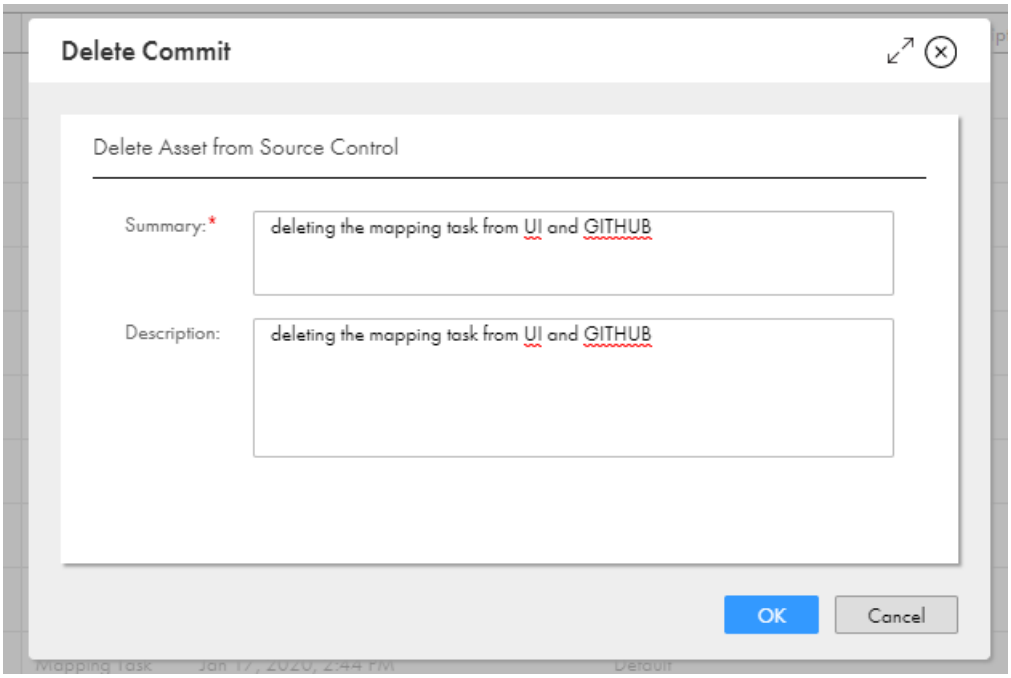

Note: You need to delete the mapping task before you can delete the mapping because the mapping is used by the mapping task. If you right-click the mapping and choose **Delete**, you cannot delete the mapping because it is used by other assets.

3. Click **Delete**.

   The **Delete Commit** dialog appears asking you to commit the changes to GitHub as shown in the following image:

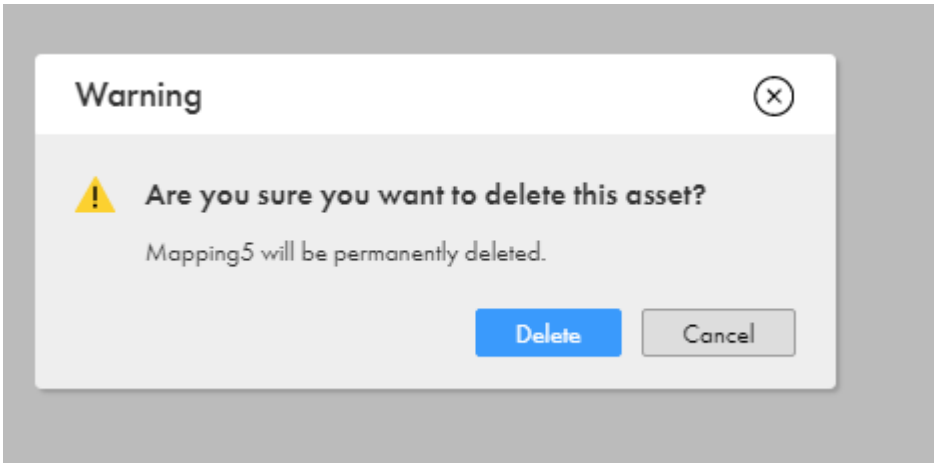

4. Click **OK**.

   The mapping task is deleted.

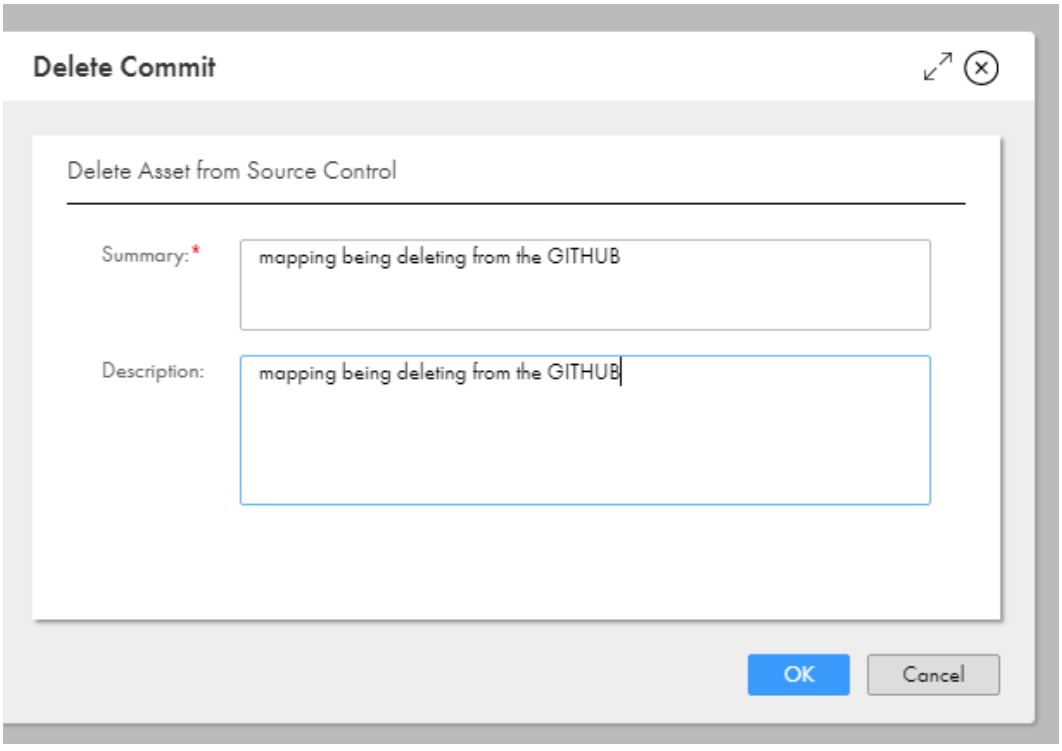

5. Right-click the mapping and select **Delete**.

The following warning appears:

6. Click **Delete**.

   The **Delete Commit** dialog box appears:

7. Click **OK**.

   The mapping is deleted from Data Integration and also from GitHub.

Both the mapping and mapping task have been deleted from the Informatica Intelligent Cloud Services repository and from the GitHub repository as shown in the following image:

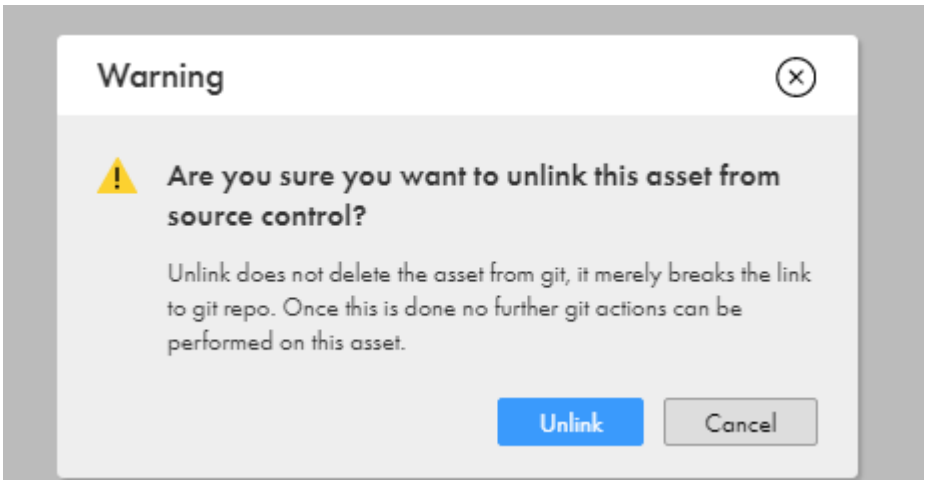

Scenario 2: Unlinking a mapping and mapping task from a source-controlled organization

In this scenario, a mapping is used by a mapping task. Both assets are checked into GitHub in a source-controlled organization.

1. Right-click the mapping task and select **Unlink**.

   The following warning appears:

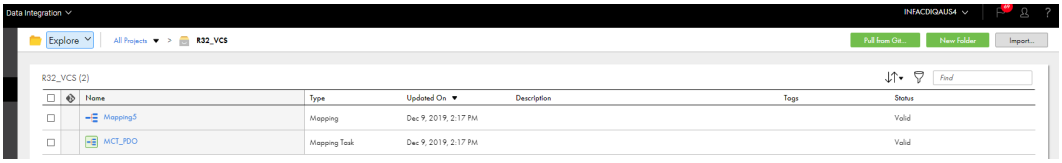

2. Click **Unlink**.

   A message appears alerting you that an asset has been unlinked from GitHub source control.

3. Unlink the mapping.

4. Check the **Explore** page. Notice that the icons for source control have been removed from these assets.

After you unlink assets from GitHub, they remain in the Informatica Intelligent Cloud Services repository. They can be edited and saved like any other assets. If you would like to make the assets source-controlled again at a later time, you can check them back in to GitHub.
