Preface

Read *Introducing INFAConnect* to learn how to create, test, and deploy a connector in the sandbox and production environments for different cloud services. Learn how to list a connector on Informatica Marketplace.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Intelligent Cloud Services web site

You can access the Informatica Intelligent Cloud Services web site at http://www.informatica.com/cloud. This site contains information about Informatica Cloud integration services.

Informatica Intelligent Cloud Services Communities

Use the Informatica Intelligent Cloud Services Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the Informatica Intelligent Cloud Services Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

Informatica Intelligent Cloud Services Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Data Integration connector documentation

You can access documentation for Data Integration Connectors at the Documentation Portal. To explore the Documentation Portal, visit https://docs.informatica.com.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Intelligent Cloud Services Trust Center

The Informatica Intelligent Cloud Services Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the Informatica Intelligent Cloud Services Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Cloud Services Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all Informatica Intelligent Cloud Services components. Subscribing to all components is the best way to be certain you never miss an update.

To subscribe, on the Informatica Intelligent Cloud Services Status page, click **SUBSCRIBE TO UPDATES**. You can choose to receive notifications sent as emails, SMS text messages, webhooks, RSS feeds, or any combination of the four.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Welcome to INFAConnect

Welcome to INFAConnect, a service that empowers you to develop and deploy connectors for different cloud services to connect to cloud applications and databases.

INFAConnect provides a self-service interface that radically simplifies how you build and customize connectors to meet your specific needs.

You can quickly build a connector in a matter of few clicks! Whether you want to find existing connectors, build a new one, or deploy a connector for use in the sandbox and production, INFAConnect simplifies these tasks for you.

INFAConnect integrates with the Informatica Marketplace to seamlessly list your connectors. This integration boosts visibility and streamlines the process of publishing and showcasing your connectors to a wider audience.

Note: INFAConnect is available for preview. Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. Note that if you are working on a preview POD, all data is excluded from SOC 2 compliance coverage. For more information, contact the INFAConnect team at DLInfaConnect@informatica.com.

Let's get started!

Get started using INFAConnect to create, test, and deploy a connector.

To create a connector, follow these quick steps:

1. Search if the connector is already available. If not, go ahead and create a new connector.
2. Register and develop connectors for different cloud services using the SDK or a Swagger file.
3. Deploy the connector to the sandbox environment for testing.
4. Promote the connector for deployment to the production environment.
5. List your connector on Informatica Marketplace to get access to a broad audience of Informatica users.

You can also:

- View the status of the deployment process for your connector.
- View and manage the connectors deployed in your organization in the sandbox and production environments.

For any assistance, reach out to the INFAConnect team at DLInfaConnect@informatica.com.

User roles

Roles determine the tasks that users can perform in INFAConnect.

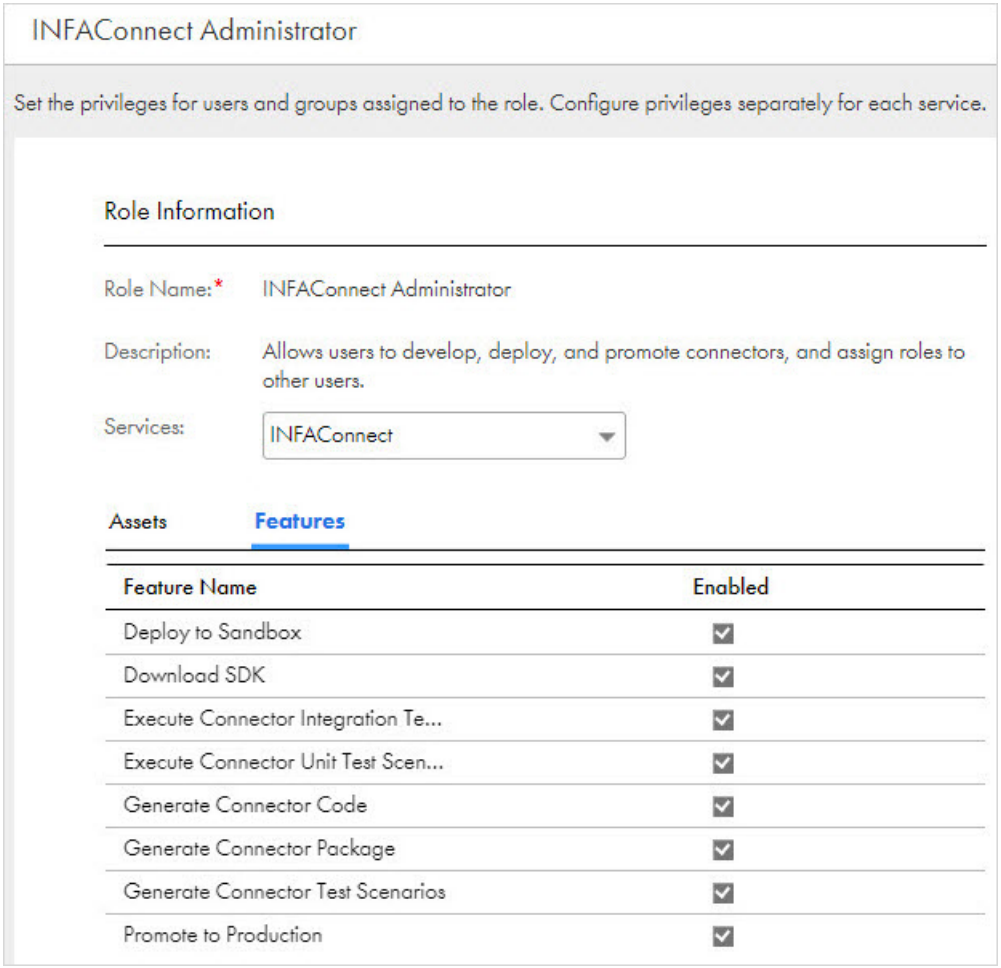

Before you can use INFAConnect, as an organization administrator, you must assign relevant roles to the users.

INFAConnect Administrator

Users with the INFAConnect Administrator role have the following feature privileges:

- Download the SDK.
- Generate and run test scenarios.
- Generate a connector package.
- Deploy connectors to sandbox and production environments.
- Assign role to other users.

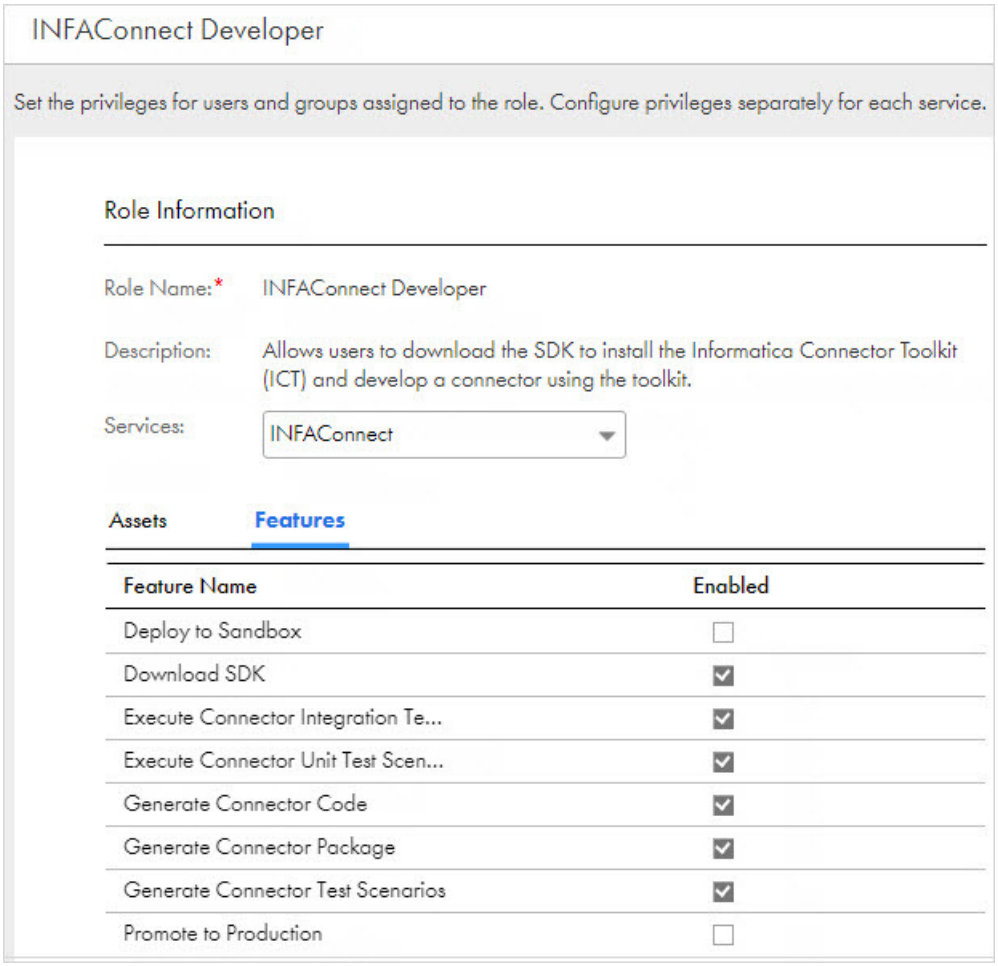

The following image shows an example of the default feature privileges assigned to the INFAConnect Administrator role:

INFAConnect Developer

Users with the INFAConnect Developer role can download the SDK to install the Informatica Connector Toolkit, generate and run test scenarios, and generate a connector package using the toolkit.

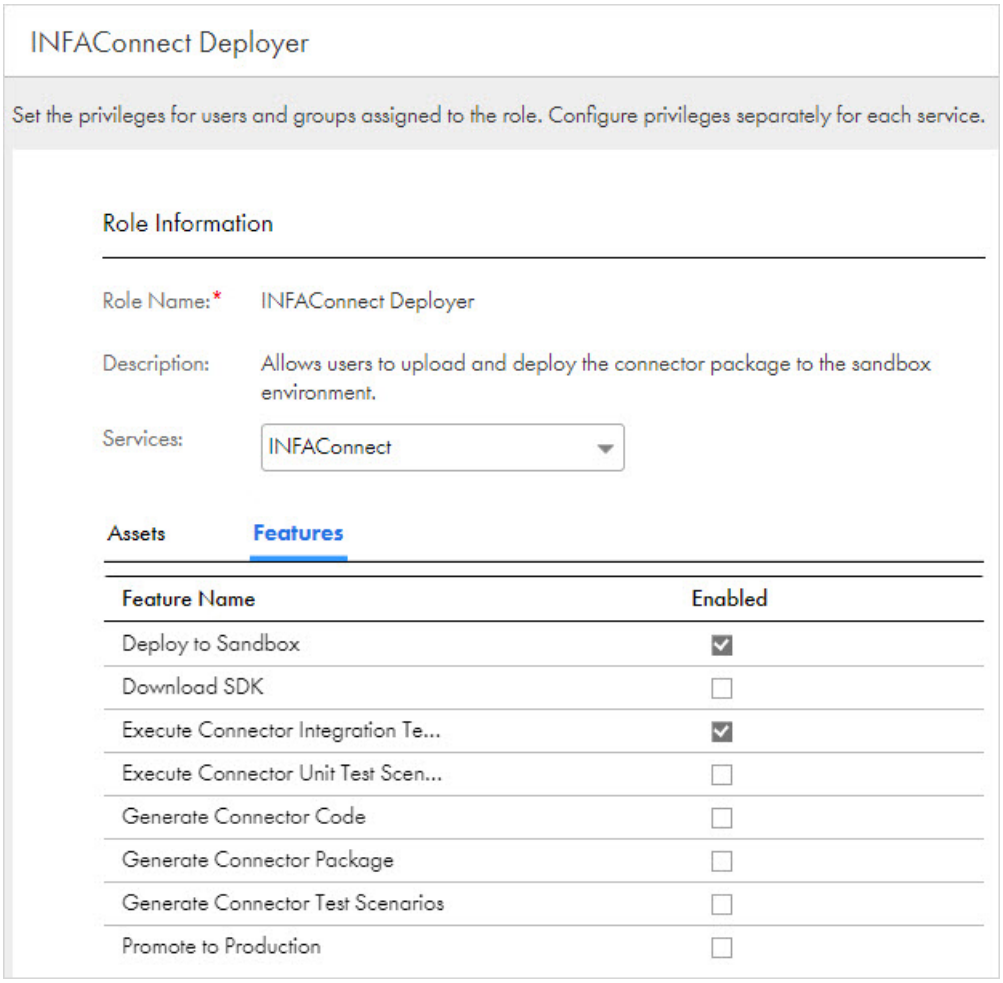

The following image shows an example of the default feature privileges assigned to the INFAConnect Developer role:

INFAConnect Deployer

Users with the INFAConnect Deployer role can run the integration test scenarios and deploy a connector to the sandbox environment.

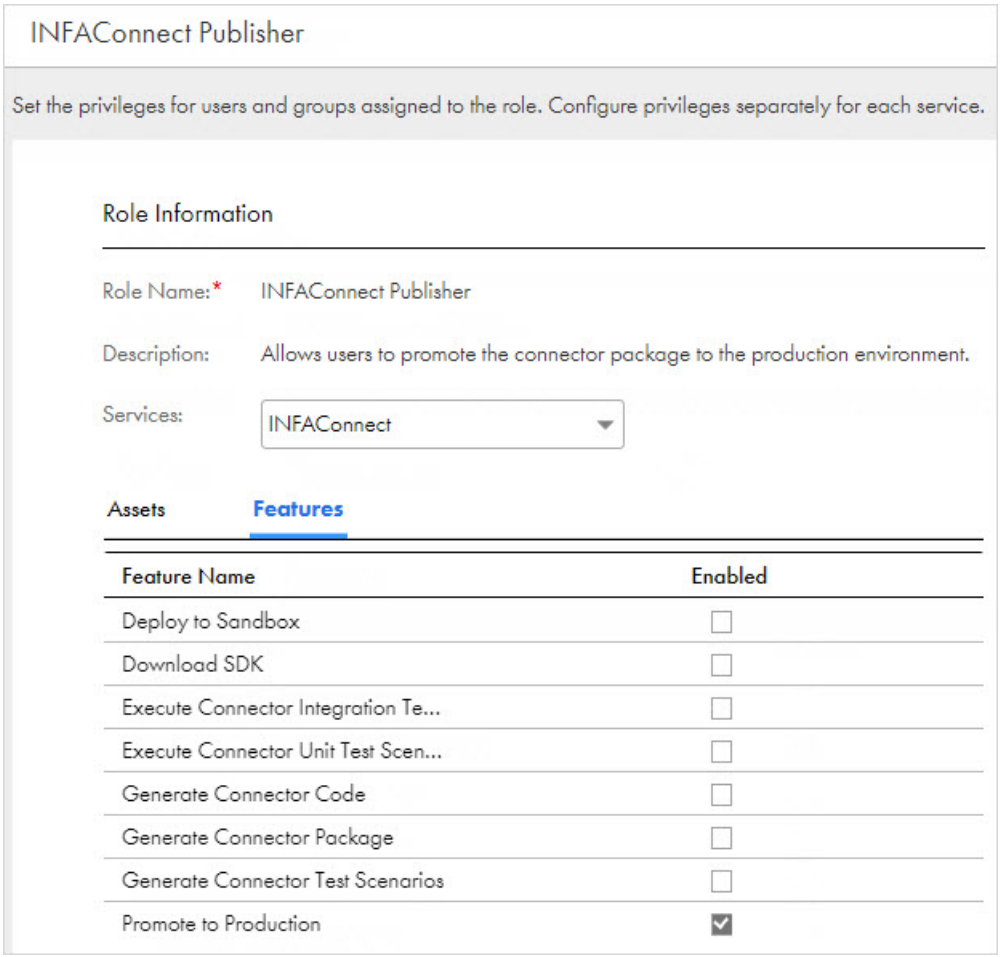

The following image shows an example of the default feature privileges assigned to the INFAConnect Deployer role:

INFAConnect Publisher

Users with the INFAConnect Publisher role can promote a connector package for deployment to the production environment.

The following image shows an example of the default feature privileges assigned to the INFAConnect Publisher role:

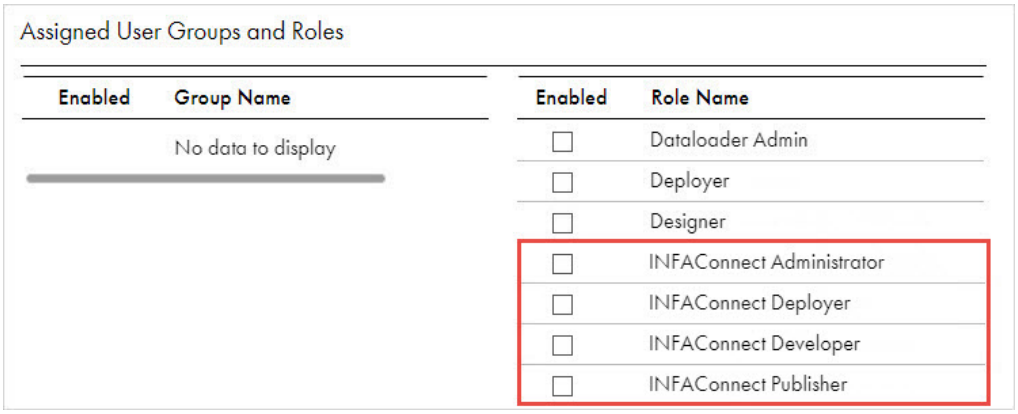

For more information on how to assign roles to a user, see "Assign roles" on page 10.

Assign roles

As an organization administrator or INFAConnect administrator, when you create or edit a user, you can assign roles to the user.

Perform the following steps to assign roles:

1. On the My Services page, select **Administrator**.
2. In Administrator, select **Users**.
3. Click the user name to edit a user or click **Add User** to create a new user.
4. In the **Assigned User Groups and Roles** section, select the roles that you want to assign to the user.

5. Click **Save**.

For more information on how to create or edit a user, see Creating a user.

CHAPTER 2

Create a connector

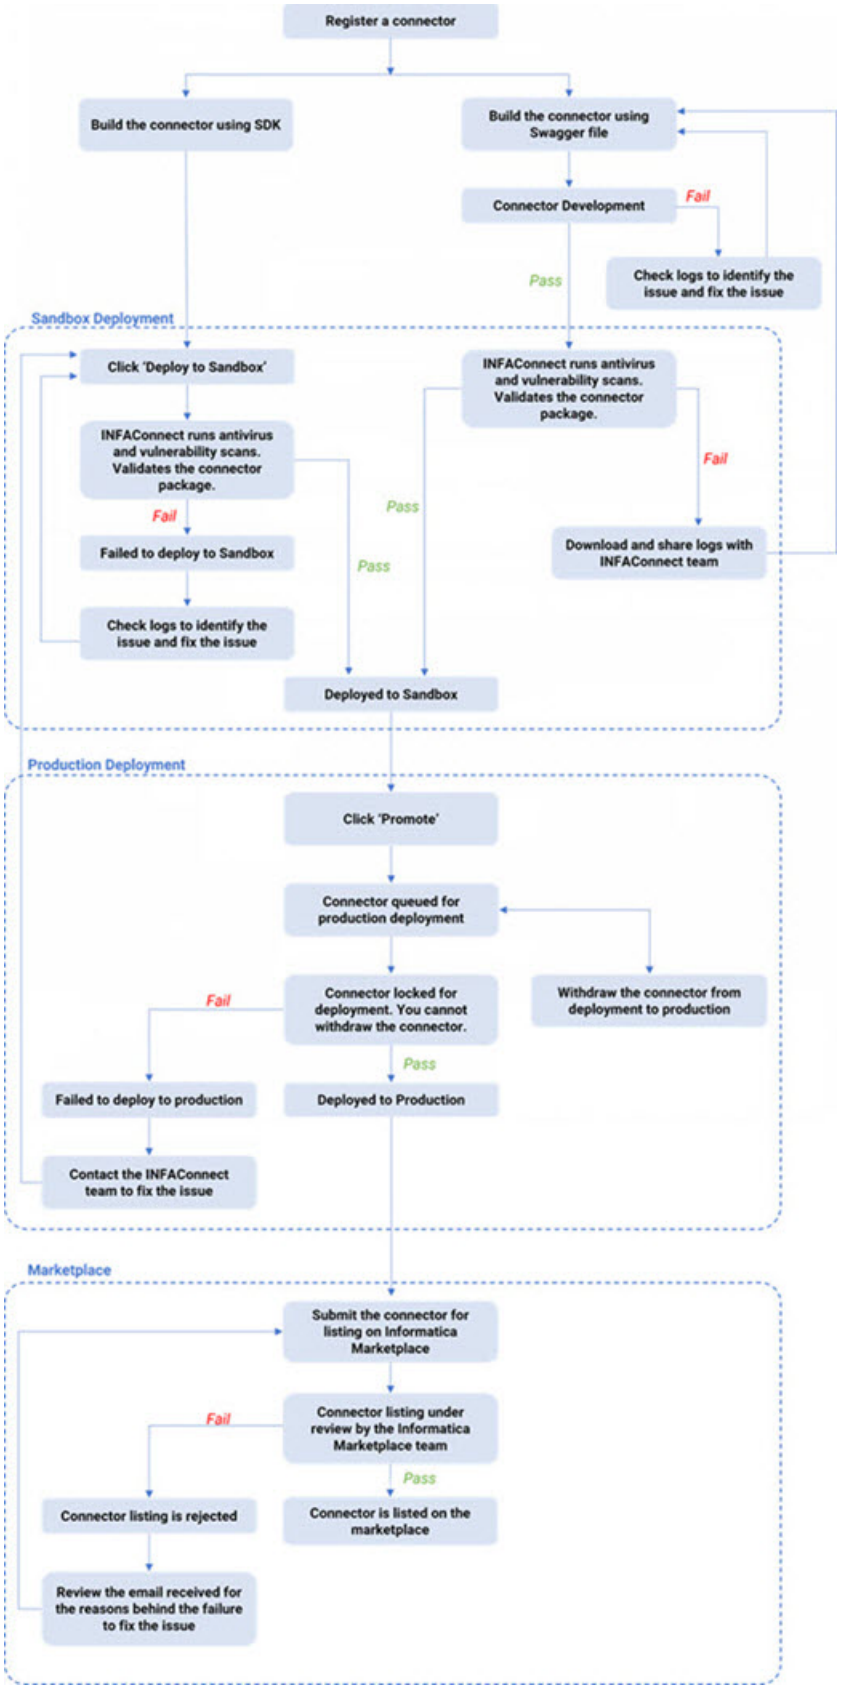

Use INFAConnect to create, test, and deploy connectors of your choice.

To create and use a new connector, register the connector, build the connector using the SDK or a Swagger file, and then deploy the connector.

The deployment process includes sandbox deployment and production deployment. After testing the connector in sandbox, you can promote the connector for production deployment.

After the production deployment, you can list your connector on Informatica Marketplace to enhance its visibility, reach a wider audience, and facilitate integration for users seeking solutions that align with their data management needs.

The following flowchart illustrates the process of bulding a connector:

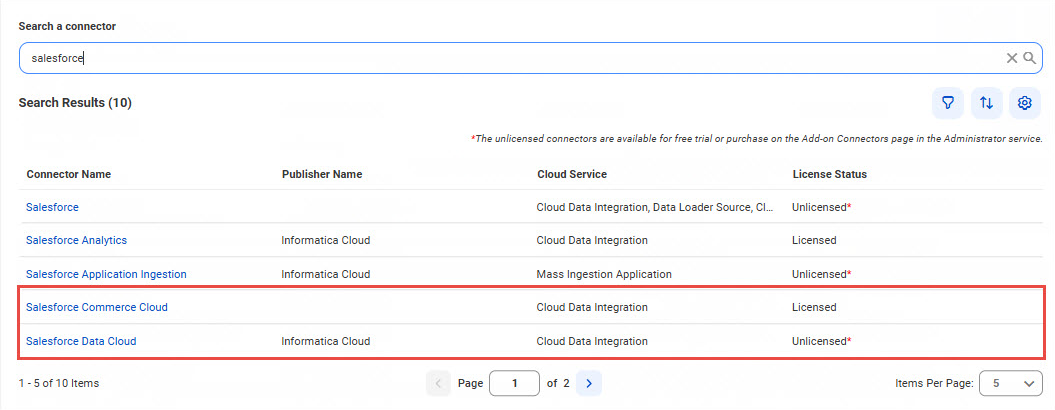

Register a connector
Build the connector using SDK
Build the connector using Swagger file
Connector Development
Fail
Pass
Check logs to identify the issue and fix the issue
Sandbox Deployment
Click 'Deploy to Sandbox'
INFAConnect runs antivirus and vulnerability scans. Validates the connector package.
Fail
Failed to deploy to Sandbox
Check logs to identify the issue and fix the issue
Pass
INFAConnect runs antivirus and vulnerability scans. Validates the connector package.
Fail
Download and share logs with INFAConnect team
Pass
Deployed to Sandbox
Production Deployment
Click 'Promote'
Connector queued for production deployment
Withdraw the connector from deployment to production
Connector locked for deployment. You cannot withdraw the connector.
Fail
Pass
Failed to deploy to production
Deployed to Production
Contact the INFAConnect team to fix the issue
Marketplace
Submit the connector for listing on Informatica Marketplace
Connector listing under review by the Informatica Marketplace team
Fail
Pass
Connector listing is rejected
Connector is listed on the marketplace
Review the email received for the reasons behind the failure to fix the issue

Step 1. Search a connector

The connector you plan to develop might already be available for use. Search from a list of available connectors developed by Informatica and its partners.

Specify the connector name in the search bar and press enter.

The search results display the licensed and unlicensed connectors.

The **Licensed** connectors are those that are already available in your organization and ready to be consumed. The **Unlicensed** connectors are available for free trial or purchase on the **Add-on Connectors** page in Administrator.

If the connector is not available, you can go ahead and create a new connector.

Step 2. Build a connector

Register the new connector and then use the SDK or a Swagger file to build the connector for use in different cloud services.

Before you build a connector, register the new connector to reserve the connector name with Informatica.

Use the following methods to build a connector:

Use SDK

Download the SDK to install the Informatica Connector Toolkit on your machine to build a connector that uses JDBC drivers, third-party libraries, or REST APIs.

The SDK contains the installer files for the toolkit. The Informatica Connector Toolkit is an Eclipse plug-in that adds the wizards and menus to the Eclipse IDE to develop, test, and deploy a connector.

You can build a connector using the toolkit and then deploy the connector in sandbox and production environments using INFAConnect.

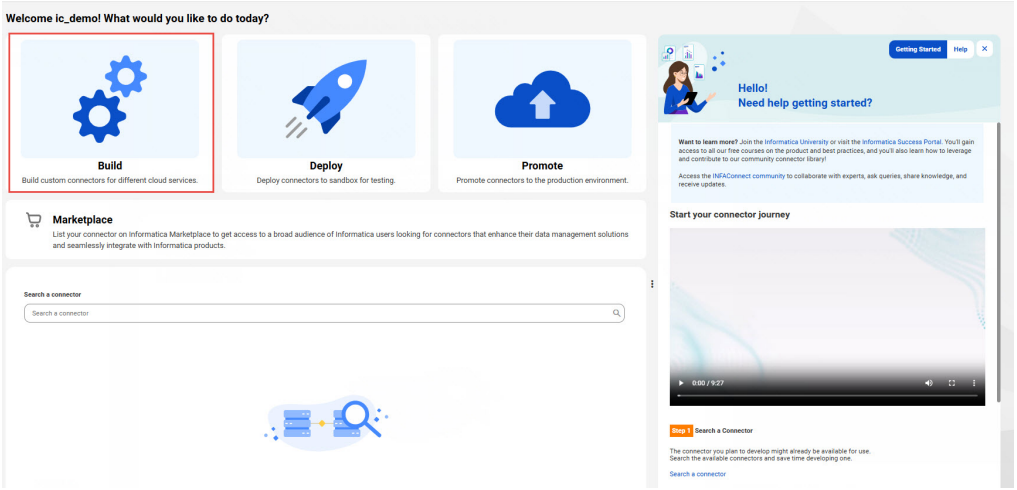

Use Swagger file

Use a Swagger JSON or an OpenAPI JSON file to build a connector in INFAConnect.

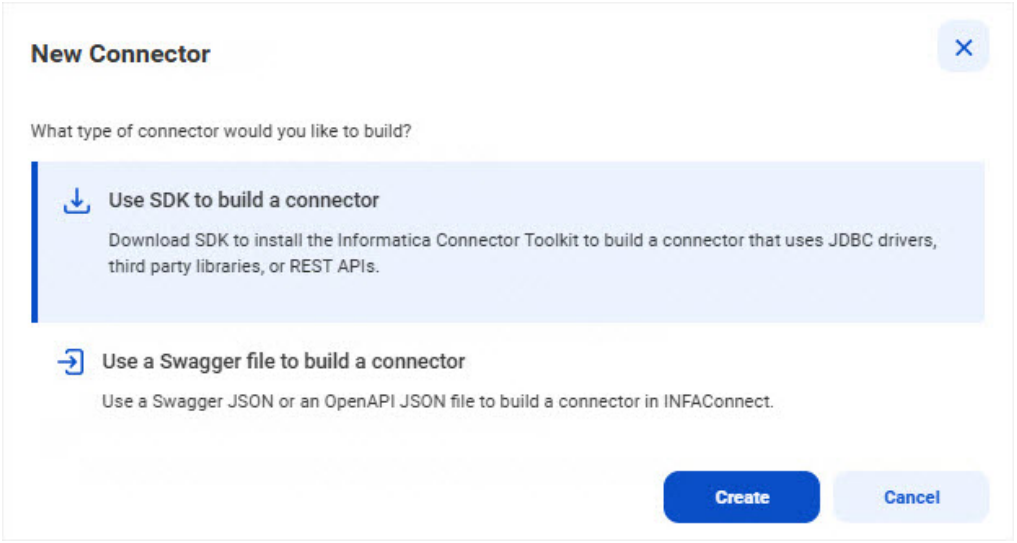

Register a connector

Register a new connector to reserve the connector name with Informatica.

1. On the INFAConnect home page, click **Build**.

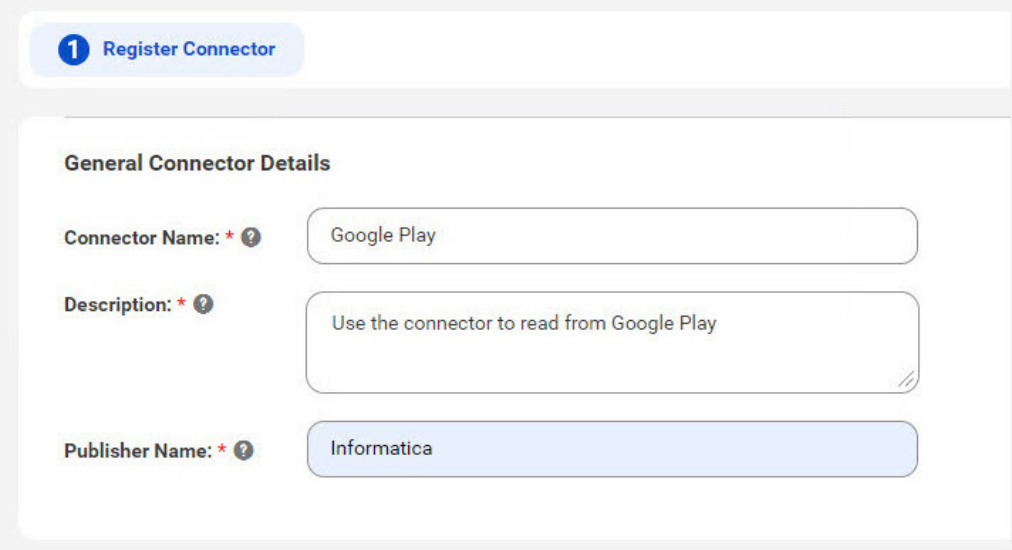

2. Select the type of connector you want to build.

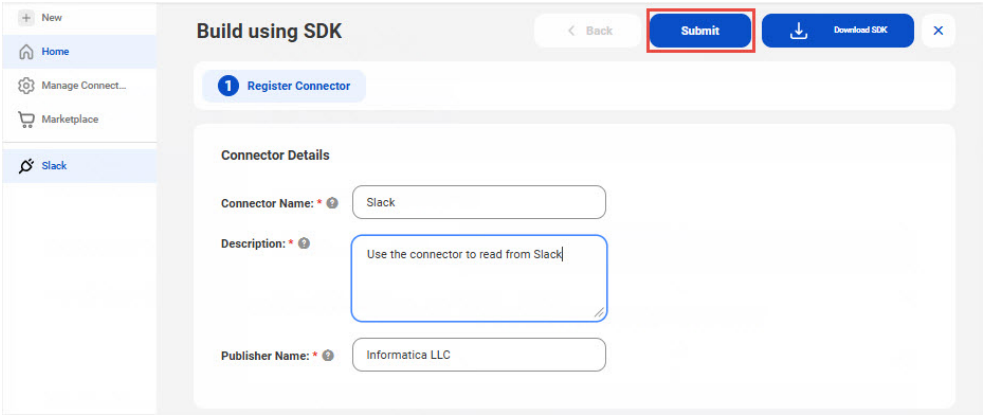

3. On the **Register Connector** tab, specify the following details:

Property	Description
Connector Name	Name of the connector. Each connector name must be unique. The connector name can contain alphanumeric characters, spaces, and underscore (_). Maximum length is 100 characters.
Description	Description of the connector. Maximum length is 4000 characters.
Publisher Name	Name of the publisher who owns the connector. The publisher name can contain alphanumeric characters, spaces, ampersand (&), and underscore (_). Maximum length is 100 characters.

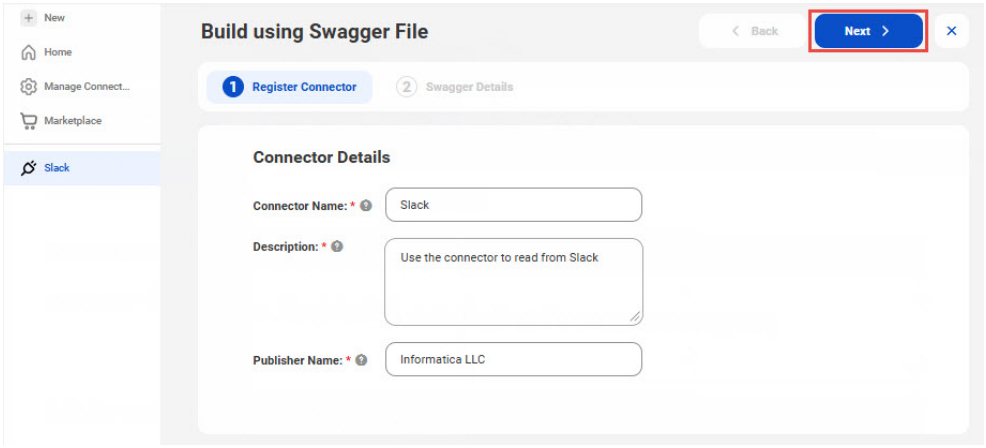

The following image shows the fields required to register a connector:

4. To proceed, perform one of the following actions based on the method you select to build the connector:
   - If you select the SDK method, click **Submit**.

- If you select the Swagger file method, click **Next**.

Build the connector using SDK

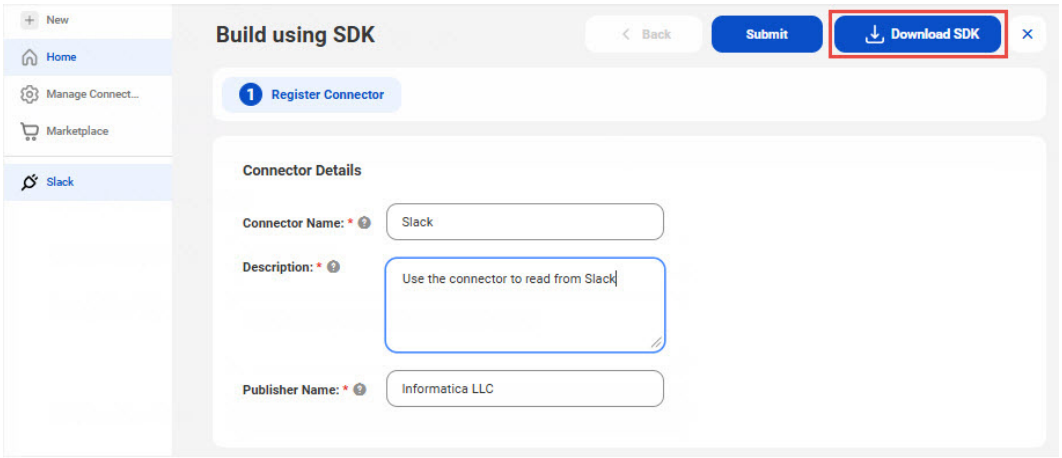

Install the Informatica Connector Toolkit and the Eclipse IDE package to build a connector.

Download the SDK to install the Informatica Connector Toolkit. The SDK contains the installer files for the Informatica Connector Toolkit.

When you run the Informatica Connector Toolkit installer, the installer installs the Informatica Connector Toolkit Eclipse plug-in in the Eclipse IDE.

You can also upgrade an existing SDK if you have already installed the Informatica Connector Toolkit earlier.

After you register a connector, click **Download SDK**.

For more information about the Eclipse versions that you can use with the Informatica Connector Toolkit, see Eclipse versions.

For more information about how to install the toolkit, see Install the Informatica Connector Toolkit.

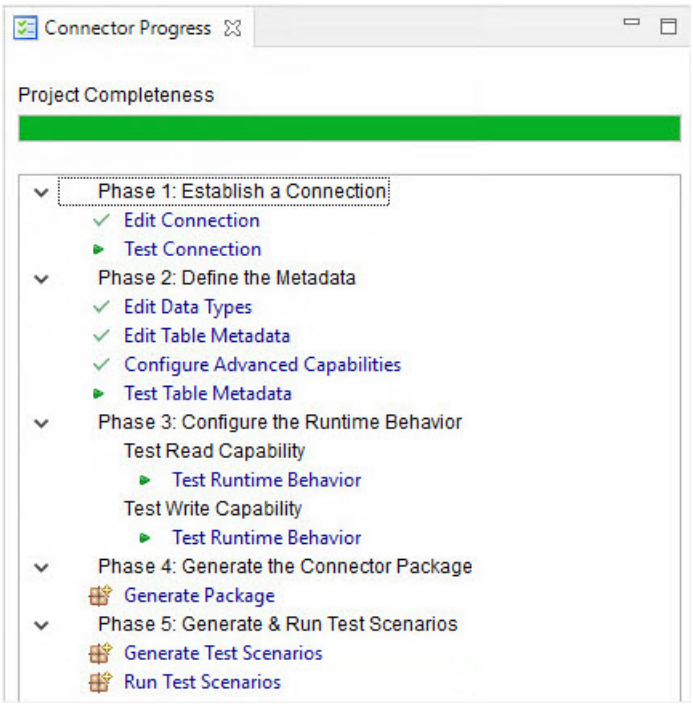

Use Informatica Connector Toolkit

Open the Eclipse IDE and use the Informatica Connector Toolkit to build a connector.

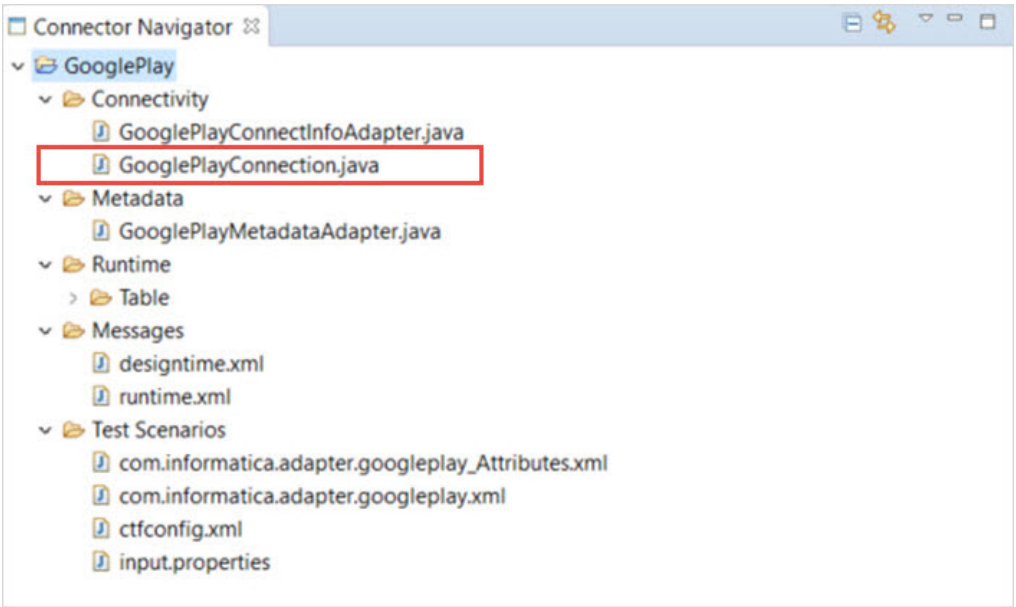

The process of building a connector consists of five phases.

1. Establish a connection.
   Define the connection attributes, create connection pages, and add third-party libraries required to connect to the data source.

   The following image shows the five phases of connector development:

   While building a connector, the toolkit autogenerates code for each phase based on the connector capabilities that you choose.

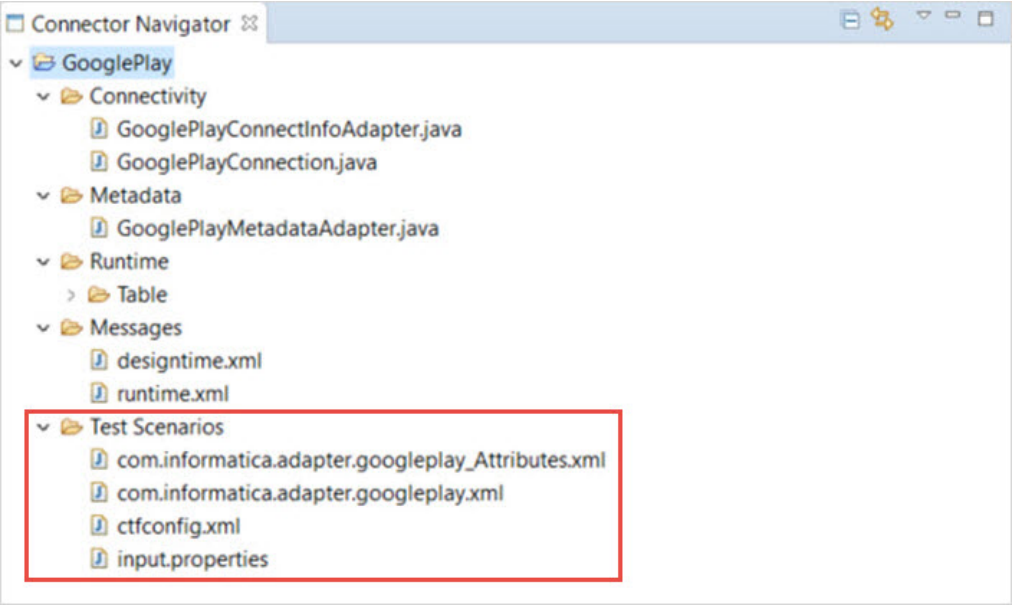

2. Define the connector metadata.
   Define the data types, object metadata, and the connector capabilities.
3. Configure the runtime behavior of the connector.
   Configure the runtime behavior that defines how the connector performs operations, such as, establish a connection, close a connection, prepare SQL statements, and run SQL statements.

   You can set up the runtime implementation for each object.
4. Generate the connector package.
   After you develop the connector, the toolkit bundles the connector artifacts and generates the connector package.

5. Generate and run test scenarios.
   Use the toolkit to autogenerate test scenarios to quickly perform unit and integration testing for your connector.

   Note: It is mandatory to run unit test scenarios. If you do not run unit test scenarios, the package validation for the connector fails during sandbox deployment in INFAConnect.

To understand the step-by-step process of building a connector, see Build a connector.

Build the connector using Swagger file

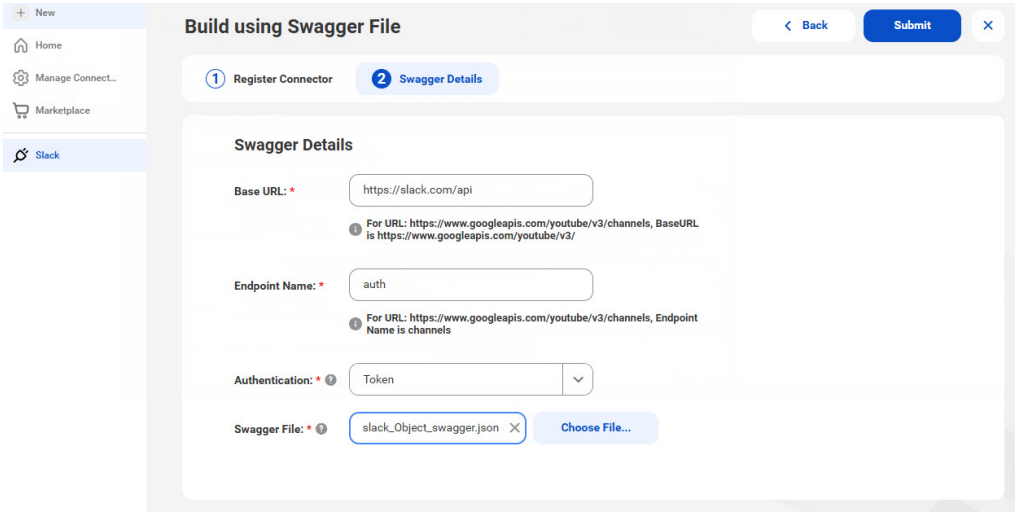

After you register a connector, specify the Swagger details to build a connector.

Use a Swagger JSON or an OpenAPI JSON file to build a connector in INFAConnect.

1. In the **Swagger Details** tab, specify the following details:

Property	Description
Base URL	Base URL of the application. For example, for the endpoint URL `https://www.googleapis.com/youtube/v3/channels`, the base URL is `https://www.googleapis.com/youtube/v3/`.
Endpoint Name	Name of the endpoint in the REST API. For example, for the endpoint URL `https://www.googleapis.com/youtube/v3/channels`, endpoint name is `channels`.
Authentication	Authentication type to connect to the application. Select one of the following authentication types: - Basic. Uses the user name and password for authentication. - OAuth 1.0. Uses the OAuth 1.0 open standard protocol to authorize access to user resources without exposing the user's credentials. - OAuth 2.0. Uses the OAuth 2.0 open standard protocol to authorize access to user resources without exposing the user's credentials. - Token. Uses a token to authenticate and validate a user for secure access. - API Key. Uses a unique API key for each user to authenticate requests. - No Authentication. Does not require authentication.
Swagger File	Swagger JSON or an OpenAPI JSON file that defines the structure, operations, parameters, and responses of an API.

The following image shows the Swagger details required to build a connector:

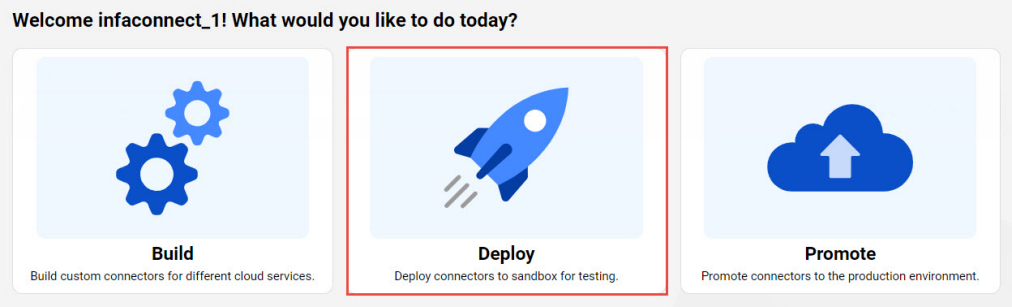

2. Click **Submit**.
The connector is submitted for deployment to sandbox. You don't need to manually submit the connector for deployment to sandbox.

Step 3. Deploy a connector to sandbox

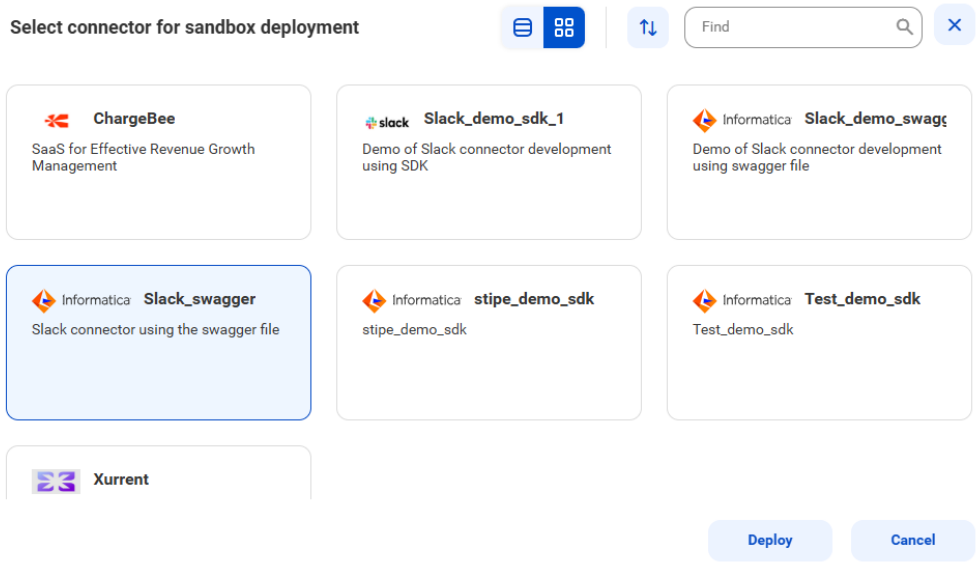

After you build a connector using SDK, add the connector package, and deploy the connector to the sandbox environment for testing.

During the deployment process, INFAConnect conducts an antivirus scan on the connector package, validates the structure of the package, and performs a vulnerability scan.

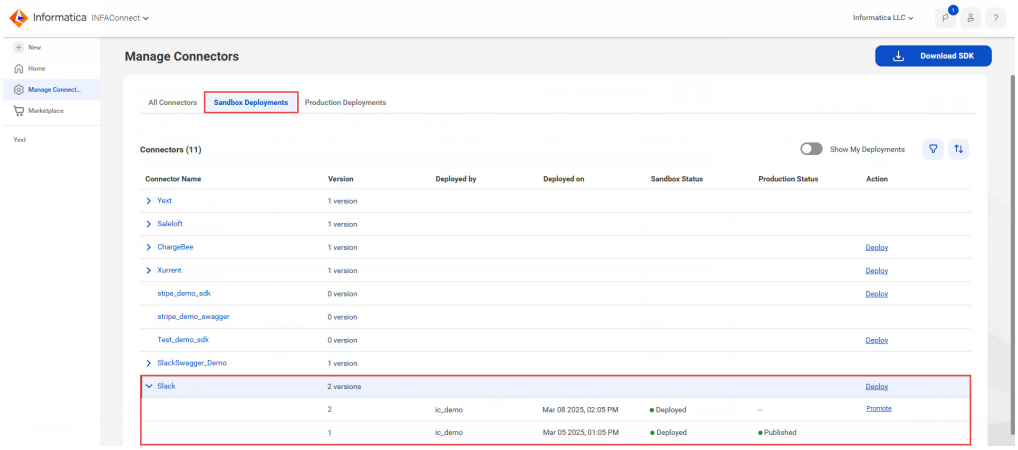

1. On the INFAConnect home page, click **Deploy**.

Select the connector for deployment, and then click **Deploy**.

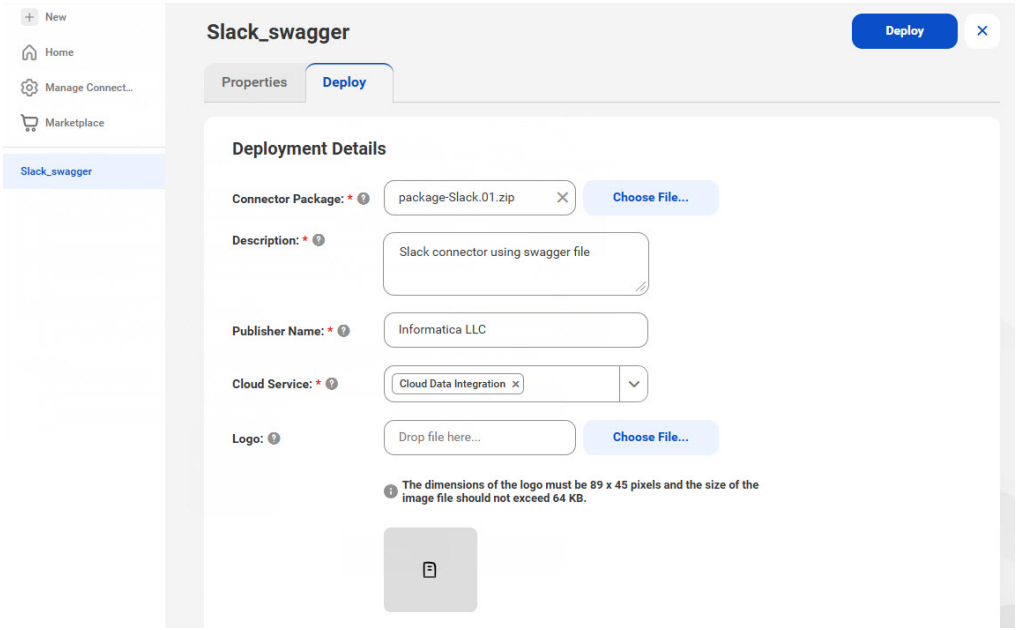

Alternatively, on the **Manage Connectors** page, click **Sandbox Deployments**, and then click **Deploy** for the connector you want to deploy to sandbox.

2. On the **Deploy** tab, specify the following details:

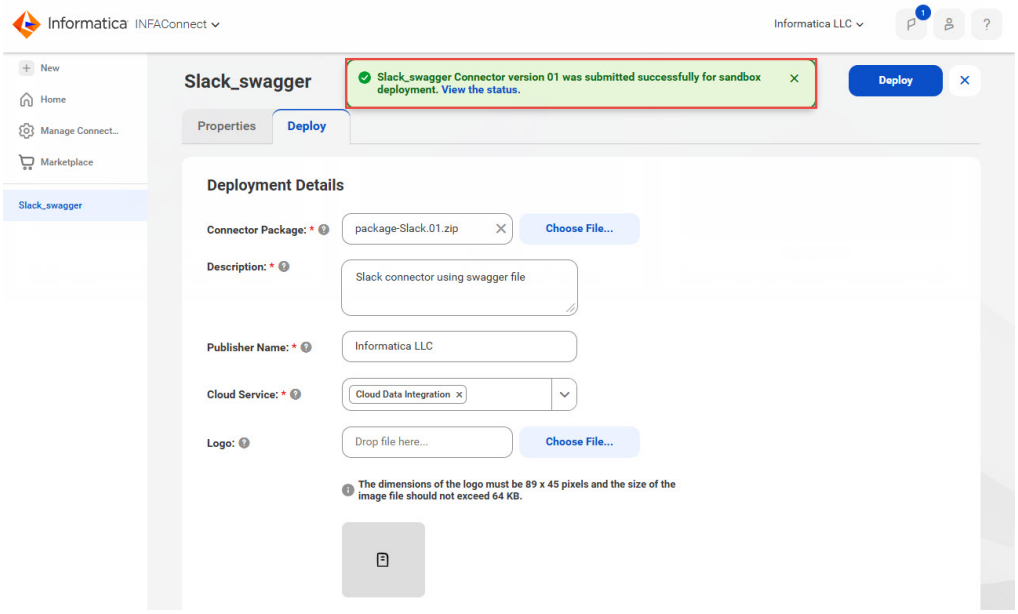

Property	Description
Connector Name	Name of the connector. Select the connector that you want to deploy.
Description	Description of the connector. Maximum length is 4000 characters.
Connector Package	The connector package generated by Informatica Connector Toolkit. Upload the connector package zip file.
Cloud Service	The cloud service category to publish the developed connector.
Publisher Name	Name of the publisher who owns the connector. The publisher name can contain alphanumeric characters, spaces, ampersand (&), and underscore (_). Maximum length is 100 characters.
Logo	The image file that contains the logo of the connector. The file must be in PNG or JPEG format and the file size must not exceed 64 KB. The dimensions of the logo must be 89 x 45 pixels.

The following image shows the fields required to deploy a connector to sandbox:

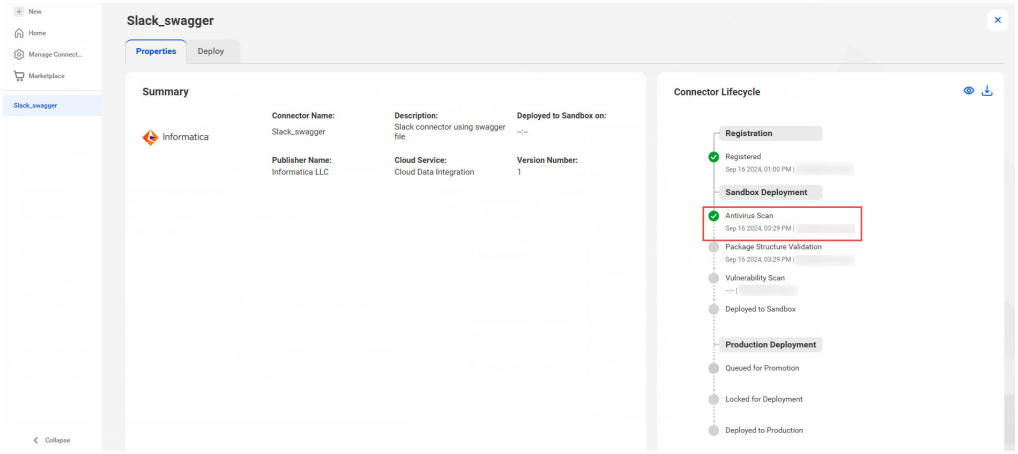

3. Click **Deploy**.

4. When the connector is submitted for deployment, click **View the status** to view the status of sandbox deployment.

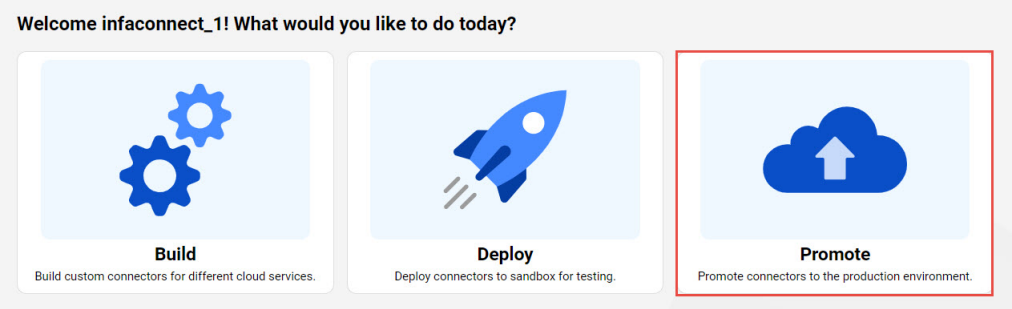

On the **Properties** tab, you can view the status of the deployment process and also download logs.

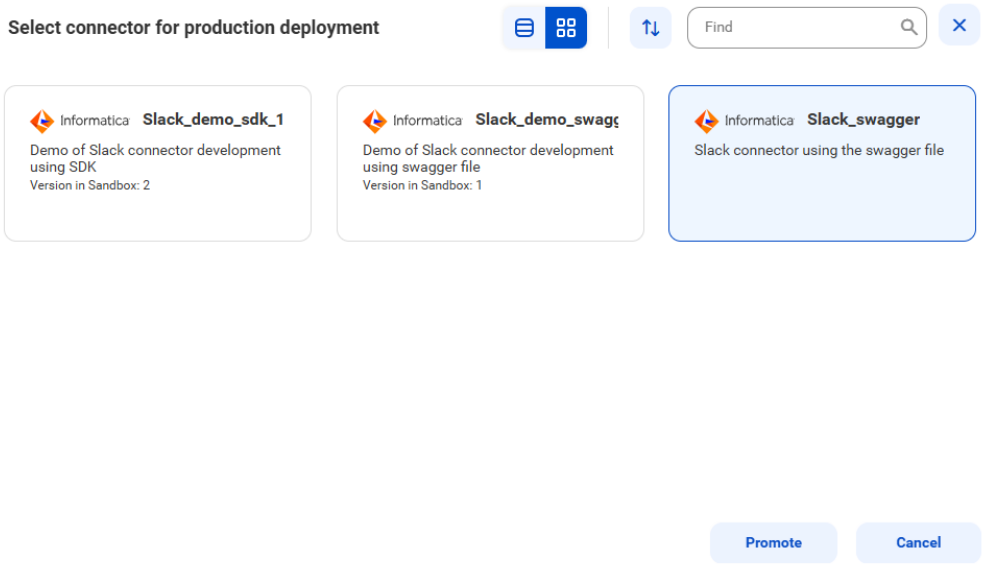

Step 4. Promote a connector to production

After you test a connector in the sandbox environment, you can promote the connector for deployment in the production environment.

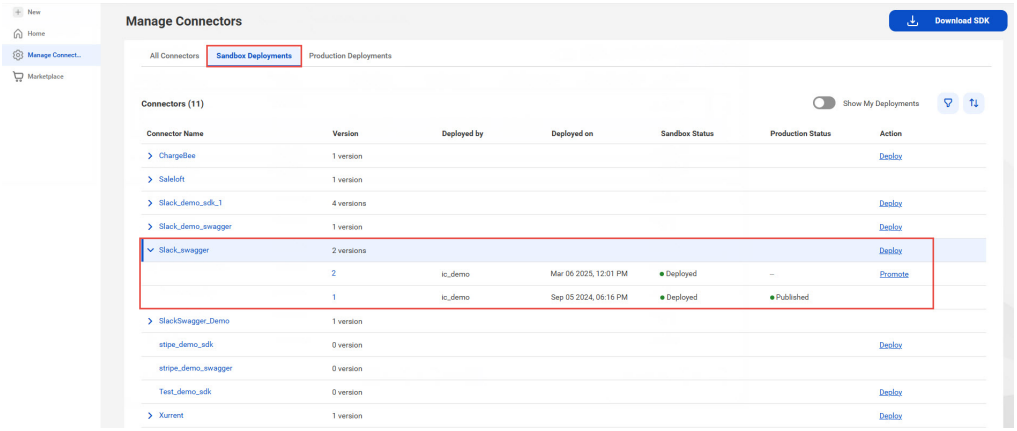

1. On the INFAConnect home page, click **Promote**.

Select the connector for production deployment, and then click **Promote**.

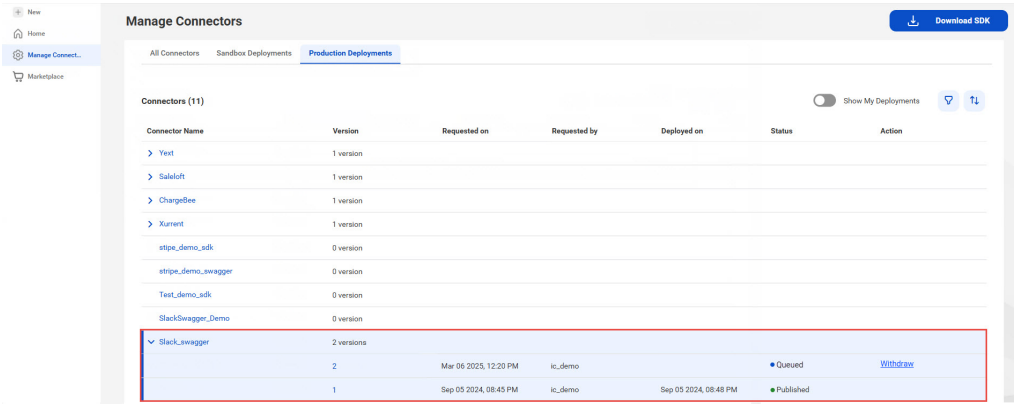

Alternatively, on the **Manage Connectors** page, click **Sandbox Deployments**, and then click **Promote** for the connector you want to promote to production.

A request is sent to Informatica to make the connector available in the production environment.

After you click **Promote**, the connector status reflects that it is queued for deployment to the production environment.

2. View the status of production deployment on **Sandbox Deployments** and **Production Deployments** tab. If the status of a connector is Queued, you can withdraw the connector from deployment to production if needed. After the status changes to Locked, you cannot withdraw the connector.

If you need any assistance after the status changes to Locked, reach out to the INFAConnect team at DLInfaConnect@informatica.com.

Step 5. List a connector on Informatica Marketplace

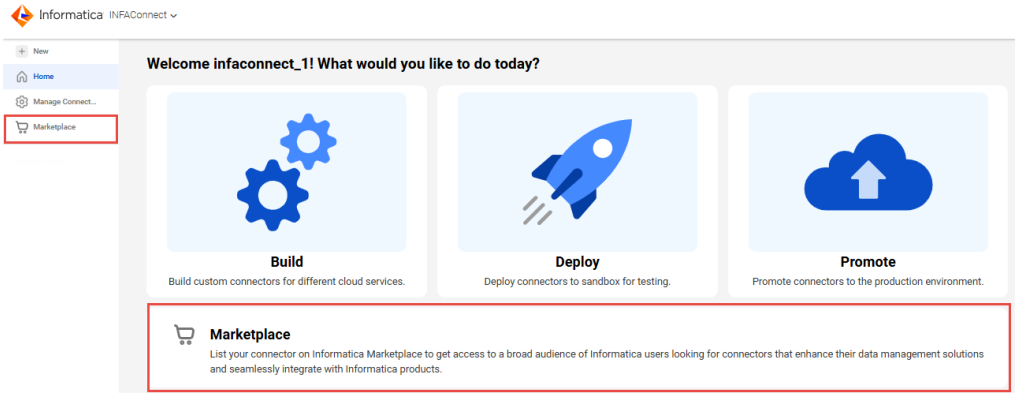

You can list your connector on Informatica Marketplace to access a broad audience of Informatica users who are looking for connectors to enhance their data management solutions and seamlessly integrate with Informatica products.

When you list your connector on the marketplace, you must provide comprehensive and engaging information to showcase your connector's capabilities effectively.

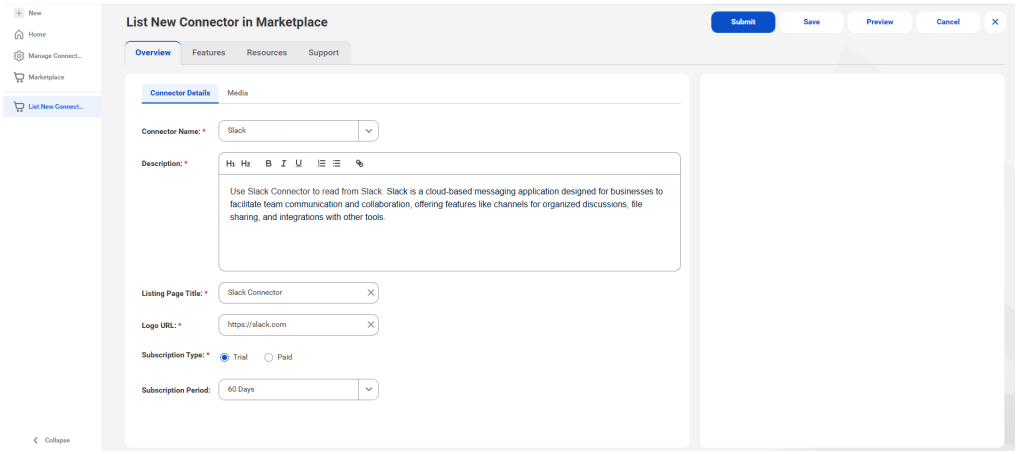

Note: You need the administrator or publisher role to list your connector on Informatica Marketplace. Contact your organization administrator to request access.

Perform the following steps to list your connector:

1. On the INFAConnect home page, click **Marketplace**.

2. On the **Marketplace** page, click **Add to Marketplace**.
   The **List New Connector in Marketplace** page appears.

3. On the **List New Connector in Marketplace** page, specify the following details for your connector listing:
   a. **Connector Details**. Provide the name, description, and listing page title to introduce your connector.
   b. **Media**. Include images and multimedia content to visually represent your connector.
   c. **Features**. Detail the technical capabilities and unique attributes to highlight what your connector offers.
   d. **Resources**. Offer guides, tutorials, and other support materials to facilitate understanding and interaction.
   e. **Support**. Provide contact emails and customer support details to ensure users can access assistance when needed.
4. To view how your connector listing appears on the marketplace, click **Preview**.
5. Click **Submit**.
   The connector listing is submitted to the Informatica marketplace team for evaluation.

After you submit the connector, you can view the status of the connector listing on the **Marketplace** page.

For more information about the various statuses of a connector listing in the marketplace, see View connectors listed on the marketplaceon page 30.

Create a connector listing

Let's create a connector listing for Informatica Marketplace.

Overview

Specify the connector details to communicate the purpose and functionality of the connector. Provide visual and multimedia content to demonstrate the features and benefits of the connector.

Connector details

The following table describes the connector details:

Property	Description
Connector Name	Name of the connector. Select the connector that you want to list on the marketplace.
Description	Description of the connector. Maximum length is 4000 characters.
Listing Page Title	The title displayed on your connector's listing page. Maximum length is 4000 characters.
Logo URL	The URL to the image file of your connector's logo. This logo helps your target audience quickly identify the connector. The URL must begin with `https://`.
Subscription Type	The type of subscription available for the connector. Select **Trial** or **Paid**.
Subscription Period	The duration of the trial or paid subscription. Select **60 Days**, **90 Days**, or **365 Days**.

Media

The following table describes the media details:

Property	Description
Overview	A summary that describes the connector and the associated multimedia content. Maximum length is 4000 characters.
Image URL	The URL to the image that illustrates the connector's functionality or interface. The URL must begin with `https://`.
Video URL	The URL to the video that demonstrates the connector in action or provides an overview of its features and benefits. The URL must begin with `https://`.

Property	Description
Video Thumbnail URL	The URL to the thumbnail image for the video. The thumbnail is a still image that serves as a preview for the video content. The URL must begin with `https://`.
Product Tags	The set of keywords associated with your connector to aid in search and categorization. Tags help your target audience find the connector by it's related features or functionality.

Features

Specify the connector specifications for your audience to better assess the connector's suitability for their needs, ensuring that they have all the necessary technical details to make an informed decision.

The following table describes the connector specifications:

Property	Description
Connector Specifications	The detailed technical information about the connector, including its compatibility, system requirements, security features, and configuration options, ensuring your target audience has a comprehensive understanding of its capabilities and operational requirements. Maximum length is 4000 characters.

Resources

Specify additional resources such as user guides, setup instructions, FAQs, and tutorials to facilitate a deeper understanding of the connector functionalities.

Consider the following example of an additional resource:

For more information about Informatica Marketplace see Marketplace.

In the example,

- The preceding text is **For more information about Informatica Marketplace**.
- The anchor text is **Marketplace** .
- The URL that the anchor text links to is **https://marketplace.informatica.com/**.

The following table describes the properties for additional resources:

Property	Description
Preceding Link Text	The introductory text that precedes a link to the additional resource, setting the context for what your target audience can expect when they click the link. Preceding link text can contain only alphanumeric characters and spaces. Maximum length is 4000 characters.

Property	Description
Anchor Text	The clickable text in the hyperlink that redirects to the the additional resource. Anchor text can contain only alphanumeric characters and spaces. Maximum length is 4000 characters.
URL	The URL to the additional resource or documentation related to the connector, providing your target audience more detailed information. Maximum length is 4000 characters. The URL must begin with `https://`.

Support

Specify the support information so your target audience can reach out for information or get help and resolve issues efficiently. This minimizies downtime and enhances their overall experience with the connector.

The following table describes the custome support details:

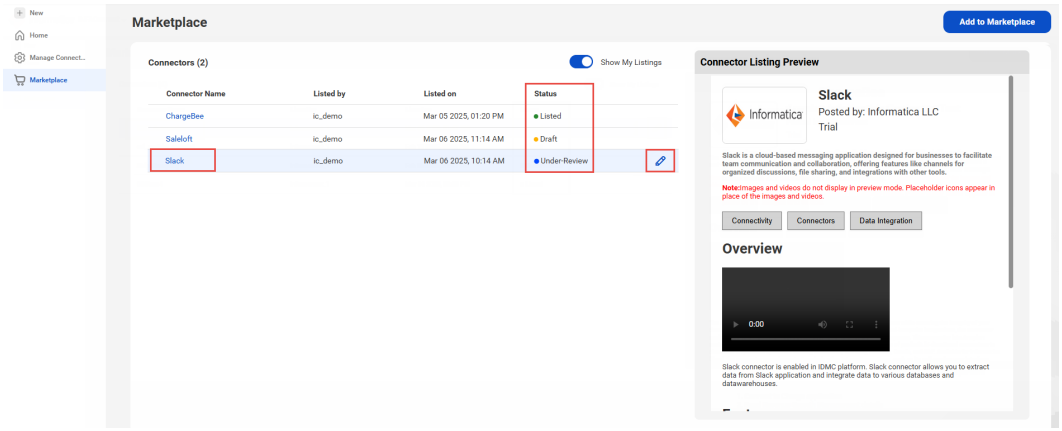

Property	Description
Publisher Type	The type of publisher. Select Independent Software Vendor (ISV) or an Original Equipment Manufacturer (OEM).
Publisher Contact Email IDs	The email addresses of the publisher to allow your target audience directly communicate with the publisher for inquiries or for further information about the connector.
Customer Support Email IDs	The email addresses of customer support that your target audience can use to reach out for help, troubleshoot issues, or receive assistance with the connector.
Customer Support Information	Additional details about customer support options, including response times, available support channels, and hours of operation, to ensure that your target audience knows how and when they can get help. Maximum length is 4000 characters.

View connectors listed on Informatica Marketplace

After you submit the connector to list on Informatica Marketplace, you can view the details and status of all the connectors submitted by your organization.

The **Marketplace** page in INFAConnect provides a comprehensive list of connectors. On this page, you can edit, preview, and view the status of your connector listings.

The following image shows the connector listing on the Marketplace page:

Click the connector name to preview the connector listing.

The status of a connector listing on Informatica Marketplace can be one of the following:

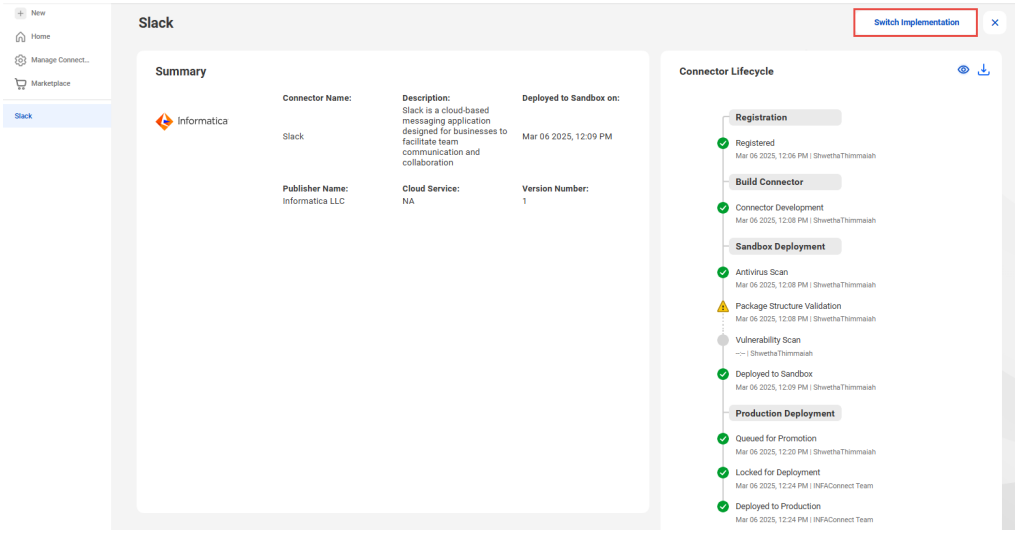

- **Draft**. The connector listing is in progress and has not yet been submitted for review. You can edit and refine it until it's ready for submission.
- **Under-Review**. The connector listing is submitted and is currently being evaluated by the Informatica marketplace team for compliance with guidelines and standards. You cannot edit a connector while it is under review.
- **Listed**. The connector listing has passed the review process and is now publicly available on Informatica marketplace.
- **Rejected**. The connector listing did not meet the necessary criteria and has been declined. Review the email received from the INFAConnect team for the reasons behind the failure. Fix the issues and resubmit the connector listing.
  If you do not receive a mail, reach out to the INFAConnect team at DLInfaConnect@informatica.com.

Switch the connector type

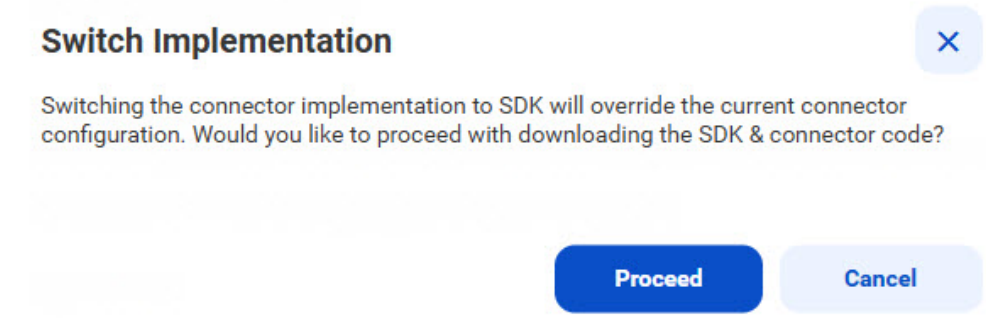

After building a connector using a Swagger file, you can switch its type to SDK. However, you cannot switch from SDK to Swagger file.

To switch from a Swagger file to SDK, specify the connector details and upload the connector package.

1. Go to **Manage Connectors** page.
2. On the **All Connectors** tab, click the connector name.
   The Connector details page is displayed.

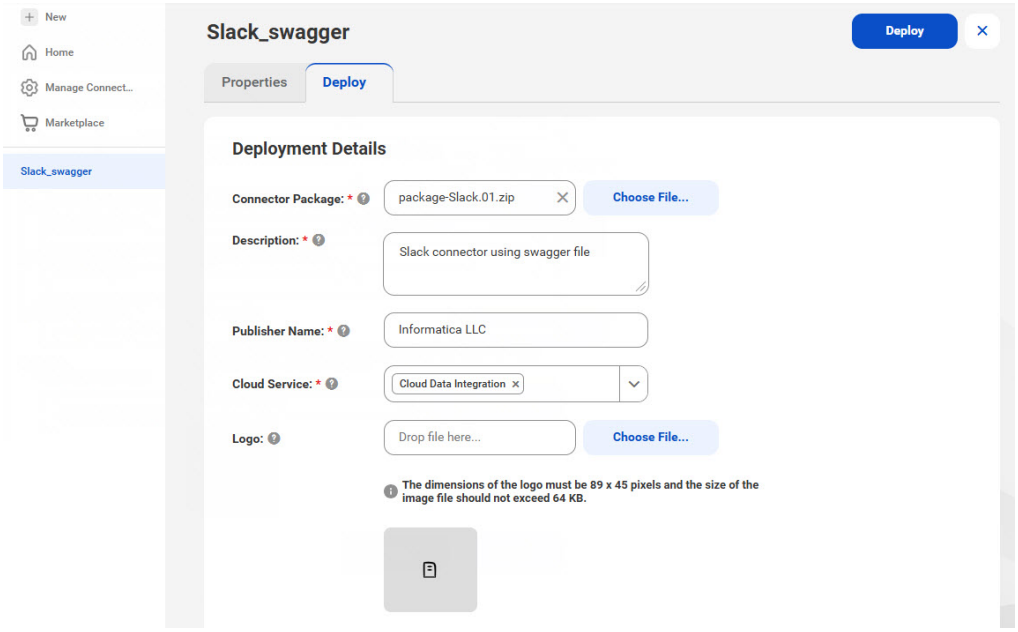

3. Click **Switch Implementation**.
   A confirmation message is displayed.

4. Click **Proceed**.

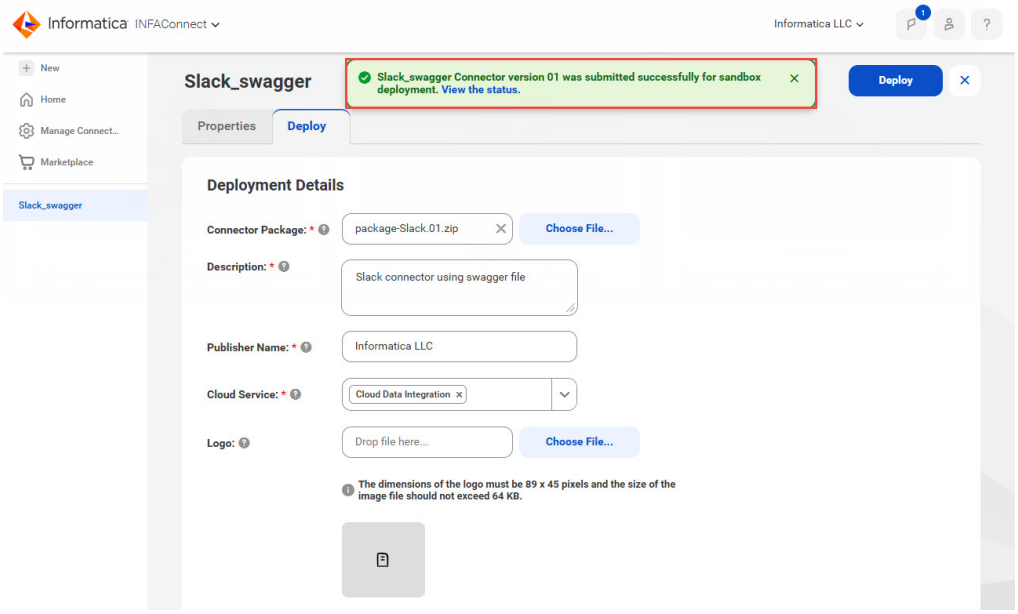

5. On the **Deploy** tab, enter the connector details and upload the connector package.

For more information about building a connector using SDK, see Build the connector using SDKon page 17.

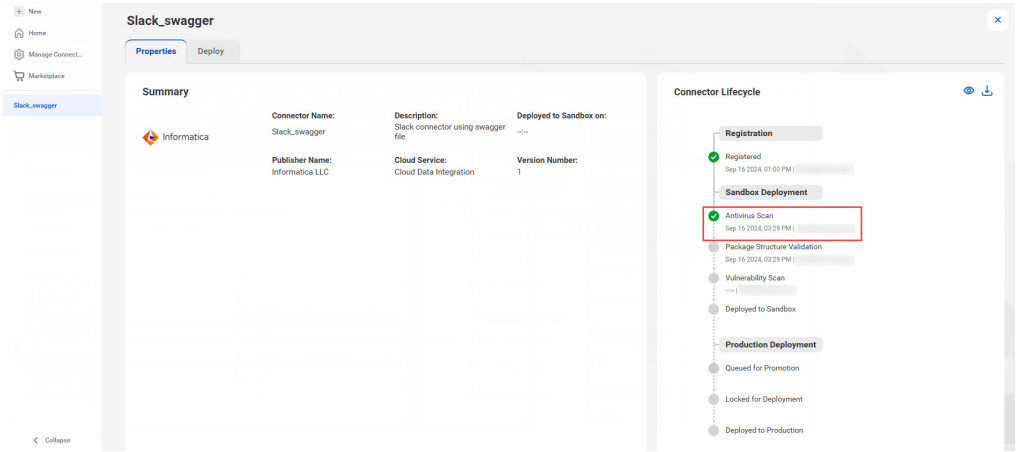

6. Click **Deploy**.

7. When the connector is submitted for deployment, click **View the status** to view the status of sandbox deployment.

The connector details are displayed.

You can view the status of the deployment process and also download logs.

CHAPTER 3

Manage connectors

After you deploy a connector to sandbox or production, you can view the details and status of all the connectors available in your organization.

The Manage Connectors page lists the connectors deployed in your organization, including those deployed in sandbox and in production. The page also outlines the available actions you can take for the deployed connectors in both sandbox and production environments.

All connectors

The **All Connectors** tab displays all connectors in your organization, including their latest versions available in sandbox and production environments, as well as the status of each connector listing in Informatica Marketplace.

The **All Connectors** tab, by default, displays every connector in your organization. To view only your connectors, toggle the **Show My Connectors** button.

The  icon preceding the connector indicates that the connector is build using a Swagger file.

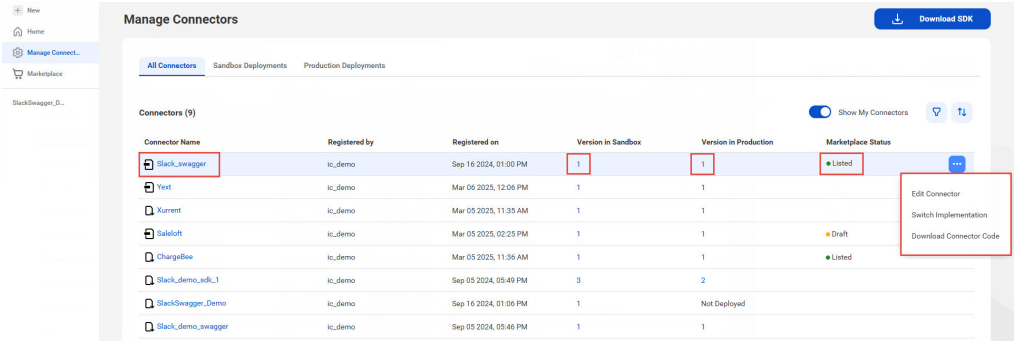

The  icon indicates that the connector is build using the SDK.

You can perform the following tasks on the **All Connectors** tab:

View the deployment status

Click the connector name to view the deployment status of the latest version of the connector.

The following image shows the **All Connectors** tab:

View the connector versions

Click the version number in sandbox and production to view the details of the connector versions on the **Sandbox Deployments** tab and **Production Deployments** tab, respectively.

View the marketplace status

The status of a connector listing in Informatica Marketplace can be one of the following:

- Draft
- Under-Review
- Listed
- Rejected

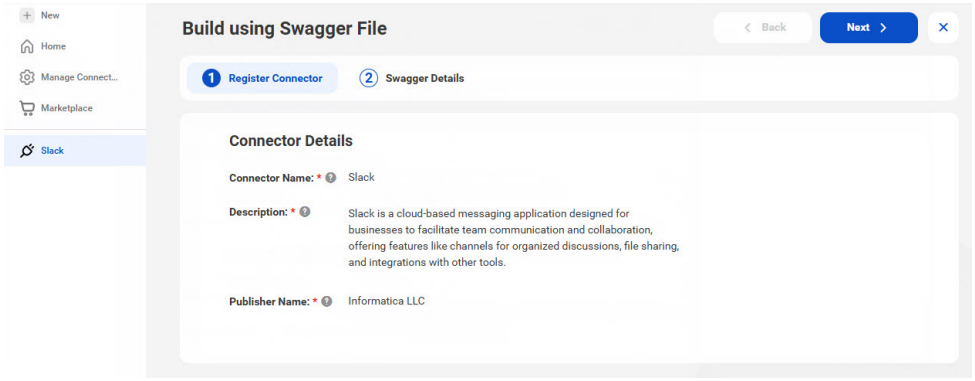

For more information about the various statuses of a connector listing in the Informatica Marketplace, see View connectors listed on the marketplaceon page 30.

Edit a connector

If you created a connector using a Swagger file, you can edit the connector. You cannot edit a connector created using SDK.

Perform the following steps to edit a connector:

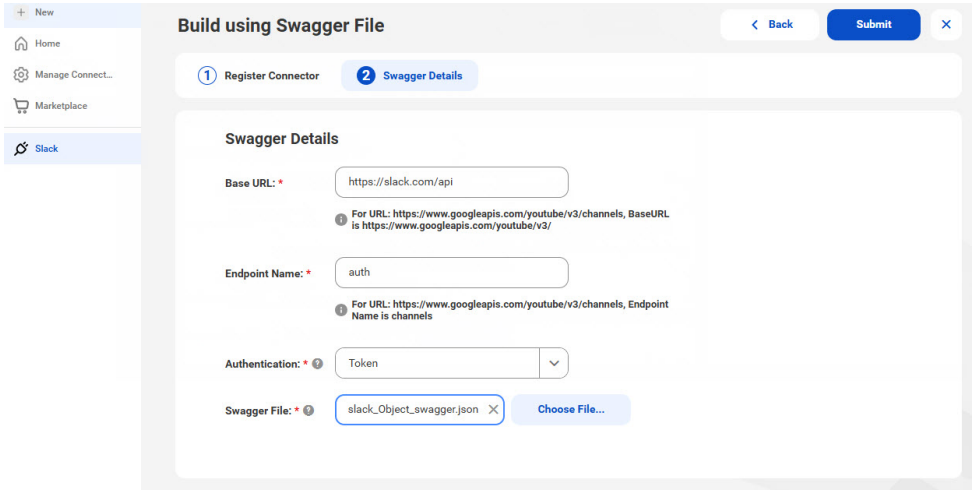

1. Click the ellipsis button for the connector you want to edit, and then click **Edit Connector**. The **Build using Swagger file** page is displayed.

   You cannot edit the connector details on the **Register Connector** tab.

2. Click **Next**.

3. On the **Swagger Details** tab, edit the swagger details, and then click **Submit**.

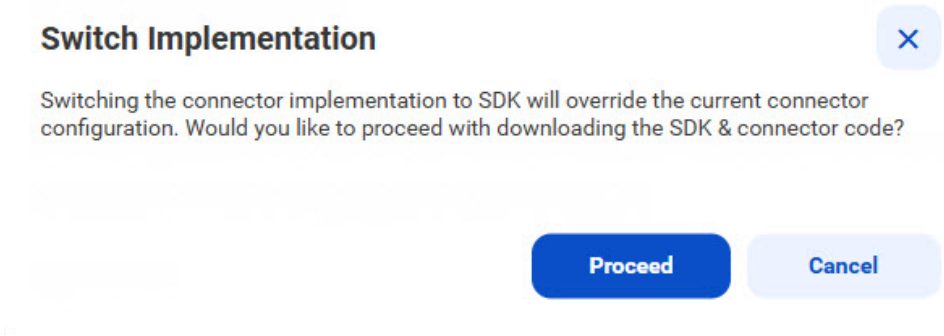

For more information about the building a connector using a Swagger file, see "Build the connector using Swagger file" on page 20.

Switch implementation

After building a connector using a Swagger file, you can switch its type to SDK.

To switch from a Swagger file to SDK, specify the connector details and upload the connector package.

1. Click the ellipsis button for the connector for which you want to switch the type, and then click **Switch Implementation**.
   A confirmation message is displayed.

2. Click **Proceed**.
3. On the **Deploy** tab, enter the connector details and upload the connector package.
4. Click **Deploy**.
5. When the connector is submitted for deployment, click **View the status** to view the status of sandbox deployment.

For more information about switching connector implementation, see Switch the connector typeon page 31.

Download connector code

Download the connector code and use the SDK to customize your connector and save time.

For more information about building a connector using SDK, see Build the connector using SDKon page 17.

Sandbox deployments

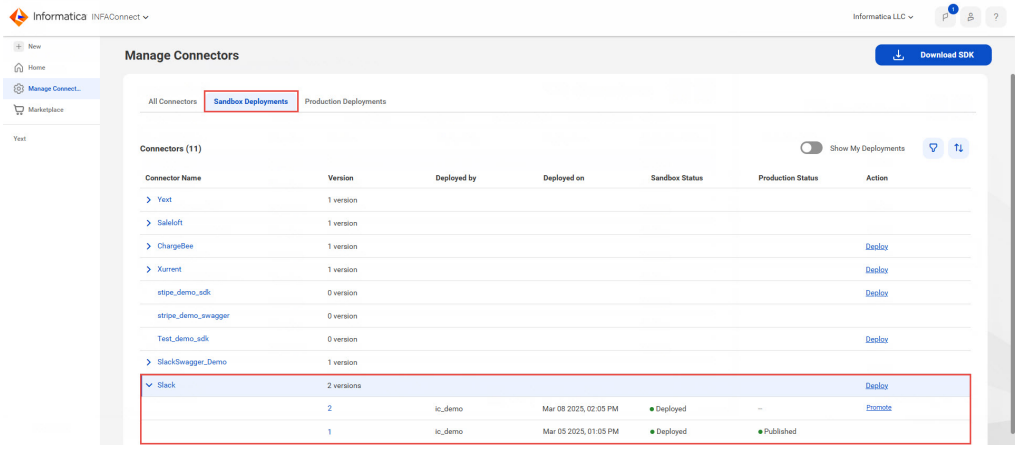

Deploy a connector to sandbox, promote a connector to production, and view the status of sandbox and production deployment.

You can perform the following tasks on the **Sandbox Deployments** tab:

Deploy a connector

Click **Deploy** to deploy a connector to sandbox.

The following image shows the **Sandbox Deployments** tab:

Promote a connector

After testing the connector in sandbox, if you want to deploy your connector to the production environment, click **Promote**.

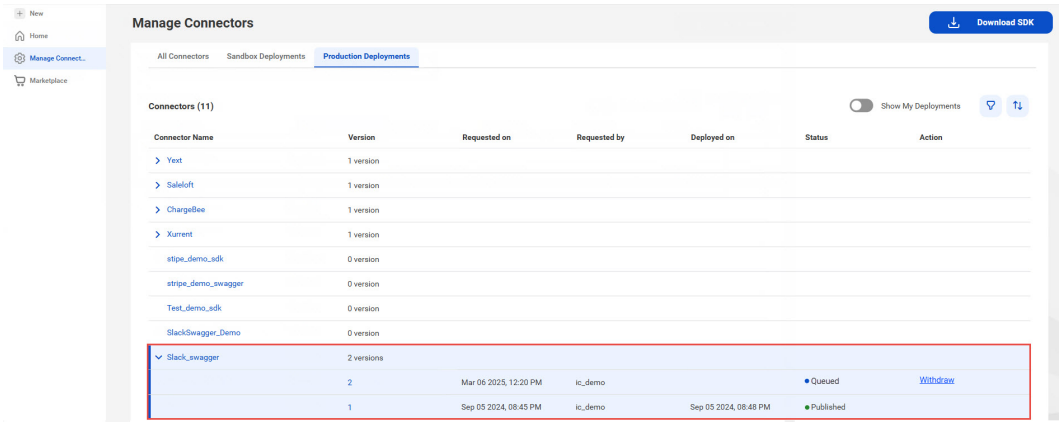

Production deployments

View the connectors promoted for deployment to production and the status of production deployment.

After you click **Promote**, the connector status reflects that it is queued for deployment to the production environment. At this stage, you have the flexibility to withdraw the connector from production deployment if needed.

After the status changes to Locked, you cannot withdraw the connector. The connector is then deployed to the production environment.

The following image shows the **Production Deployments** tab:

For information regarding the deployment schedule and the release in which the connector will be deployed, reach out to the INFAConnect team at DLInfaConnect@informatica.com.
