Preface

Refer to *Troubleshooting INFACore*for information about troubleshooting errors in INFACore.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Intelligent Cloud Services web site

You can access the Informatica Intelligent Cloud Services web site at http://www.informatica.com/cloud. This site contains information about Informatica Cloud integration services.

Informatica Intelligent Cloud Services Communities

Use the Informatica Intelligent Cloud Services Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the Informatica Intelligent Cloud Services Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

Informatica Intelligent Cloud Services Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Data Integration connector documentation

You can access documentation for Data Integration Connectors at the Documentation Portal. To explore the Documentation Portal, visit https://docs.informatica.com.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Intelligent Cloud Services Trust Center

The Informatica Intelligent Cloud Services Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the Informatica Intelligent Cloud Services Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Cloud Services Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all Informatica Intelligent Cloud Services components. Subscribing to all components is the best way to be certain you never miss an update.

To subscribe, go to https://status.informatica.com/ and click **SUBSCRIBE TO UPDATES**. You can then choose to receive notifications sent as emails, SMS text messages, webhooks, RSS feeds, or any combination of the four.

Informatica Global Customer Support

You can contact a Customer Support Center by telephone or online.

For online support, click **Submit Support Request** in Informatica Intelligent Cloud Services. You can also use Online Support to log a case. Online Support requires a login. You can request a login at https://network.informatica.com/welcome.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Troubleshooting INFACore

This section describes troubleshooting steps that you might find helpful if you run into problems when you use INFACore. These issues might result when you use the INFACore Python SDK or the JupyterLab extension for INFACore.

The topics describe general troubleshooting strategies and are not a comprehensive list of possible causes of issues.

General

The following issue can occur when you use the JupyterLab extension for INFACore:

Cannot restore the panels in the JupyterLab extension for INFACore user interface.

When you collapse both the **Connect to Data Sources** and **Apply Functions** sections and try to restore the **Runtime Environment** section, it remains hidden. Use the handles to adjust the height of the panel to view the **Runtime Environment** section.

If the **Connect to Data Sources** section remains hidden, use the handles to adjust the height of the panel to view the section.

The Secure Agent status displays as "Not Installed" in JupyterLab after you upgrade the SDK

If the agent is already installed, the status of the Secure Agent might display as "Not Installed" after you upgrade the SDK and log in to INFACore.

To rectify this issue, reinstall the agent or call the LocalComputeEngine.setup() function to set up the compute engine.

Data sources

The following issues can occur when you connect to a data source:

Initialization exception error occurs while reading or writing a large amount of data.

If you encounter an initialization exception error, configure the JVM memory requirements to resolve the issue.

Perform the following steps to configure the JVM memory from Administrator in Informatica Intelligent Cloud Services:

1. Open Administrator in Informatica Intelligent Cloud Services.
2. Navigate to the **Runtime Environments** tab.
3. Select the Secure Agent, and then click **Edit**.
4. In the **System Configuration Details** section, select **Data Integration Service** as the service and **DTM** as the type.
5. Edit the JVMOption1 property, and increase the -Xms and -Xmx values based on the amount of data that you want to process.
6. Click **Save**.

If you encounter connection-specific errors, see the applicable Cloud Data Integration Connector documentation in the Informatica documentation portal at https://docs.informatica.com

Error occurs when using a single slash "\n" entry for the Google Cloud Spanner private key.

When you create a Google Cloud Spanner connection and add the private key value in the Google Cloud Spanner connection properties from the JupyterLab for INFACore interface to connect to Google Cloud Spanner, you need to manually replace *n* in place of *n* in the private key code using the Python SDK.

Connection with Aurora and MySQL data sources fails with MS1252 code page.

The connection fails when you use the default code page value MS1252. You need to change the code page value to UTF-8 or any other supported value.

The Box connection fails for the token value entry in the OAuth Access Token field.

The **OAuth Support Refresh** field displays along with the **OAuth Access Token** field. You need to enter the token value in both of the fields to successfully create a Box connection.

Connection parameters are not displayed as mandatory for SAP ODP Extractor.

The SAP ODP Extractor connection does not display which parameter is mandatory. See the Connector documentation for the list of mandatory parameters that you need to specify.

A write operation to a Google Cloud Spanner target fails when the source does not have a primary key

If you write data to a Google Cloud Spanner target from a source table that does not have a primary key defined, the operation fails.

Error occurs when you write Null data

When you call the DataFrameWriter method to write data that is completely Null, the from_pandas() call fails to convert Null to String while writing data to the target.

Error occurs when accessing SharePoint.

Ensure that the INFACore agent is installed on the same virtual machine where the SharePoint server runs

Unsupported advanced target attributes listed for File Processor or Microsoft Excel

Even though you cannot use the File Processor or Microsoft Excel connection to write data, the advanced target attributes for these data sources appear when you attempt to configure a write operation from the INFACore Python SDK code. The write operation for File Processor and Microsoft Excel is not supported. Do not use the listed Microsoft Excel or File Processor advanced attributes.

Mapping fails when you create a new target at runtime in Google Cloud Storage

When you specify a path to create a new target at runtime in Google Cloud Storage, you need to also specify the path in the **Google Cloud Storage Path** field in the advanced source properties. Else, the mapping fails.

Functions

The following issue can occur when you configure functions:

Cannot apply functions to certain data sources

You cannot apply functions on file-based data sources. For example, Amazon S3, Google Cloud Storage, and Microsoft Azure Blob Storage.
