Preface

Read *What's New* to learn about new features, enhancements, and behavior changes in Informatica Intelligent Cloud Services℠ INFACore for the November 2023 release. You can also learn about upgrade steps that you might need to perform.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Intelligent Cloud Services web site

You can access the Informatica Intelligent Cloud Services web site at http://www.informatica.com/cloud. This site contains information about Informatica Cloud integration services.

Informatica Intelligent Cloud Services Communities

Use the Informatica Intelligent Cloud Services Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the Informatica Intelligent Cloud Services Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

Informatica Intelligent Cloud Services Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Data Integration connector documentation

You can access documentation for Data Integration Connectors at the Documentation Portal. To explore the Documentation Portal, visit https://docs.informatica.com.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Intelligent Cloud Services Trust Center

The Informatica Intelligent Cloud Services Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the Informatica Intelligent Cloud Services Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Cloud Services Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all Informatica Intelligent Cloud Services components. Subscribing to all components is the best way to be certain you never miss an update.

To subscribe, go to https://status.informatica.com/ and click **SUBSCRIBE TO UPDATES**. You can then choose to receive notifications sent as emails, SMS text messages, webhooks, RSS feeds, or any combination of the four.

Informatica Global Customer Support

You can contact a Customer Support Center by telephone or online.

For online support, click **Submit Support Request** in Informatica Intelligent Cloud Services. You can also use Online Support to log a case. Online Support requires a login. You can request a login at https://network.informatica.com/welcome.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

November 2023

The following topics provide information about new features, enhancements, and behavior changes in the November 2023 release of Informatica Intelligent Cloud Services INFACore.

Support notices

Informatica has modified the levels of customer support that it offers for one or more INFACOre features in the current release. The following notices identify the features and the current support levels.

Preview initiated

Effective in the October 2023 release, you can preview the following new functionality in advance of its general release:

- Reuse already created user-defined functions from your Informatica Intelligent Cloud Services organization.
- Integrate INFACore with the Microsoft Fabric ecosystem.

Note: Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

For more information about new features and enhancements, see "New features and enhancements" on page 6.

New features and enhancements

The November 2023 release of INFACore includes the following new features and enhancements for the INFACore Python SDK.

Unity catalog support with Databricks integration

When you integrate INFACore with Databricks enabled for unity catalog, you can access and work with the metadata and data assets stored in the unity catalog directly from your Databricks Notebook.

You can specify a unity catalog name in a Databricks Delta connection to read from or write to tables in unity catalogs in Databricks using INFACore from any integrated development environment. You can specify the catalog name in a Databricks Delta connection either through the SQL Warehouse JDBC URL or the Catalog Name field.

Reuse user-defined functions

You can reuse the transformation logic from user-defined functions (UDFs) configured in your Informatica Intelligent Cloud Services organization. In this release, you can leverage mapplets as UDFs in INFACore. Get the list of UDFs from your organization and transform the data using INFACore. You can also chain UDFs to generate a data pipeline dynamically and run the pipeline.

Bring your own data pipelines

You can reuse data pipelines such as parameterized mapping templates created in your Informatica Intelligent Cloud Services organization. You can pass native data frames and other parameter values in these mapping templates in INFACore and run multiple transformations using a single line of code. You can combine custom pipelines with native DataFrame functions, allowing you to mix and match and achieve the best solution for your use case.

INFACore integration with the Microsoft Fabric ecosystem

You can use INFACore within the Microsoft Fabric ecosystem to connect to various endpoints to leverage INFACore functionality. For use cases that require intermediate staging of data, you have the option to configure a Microsoft Fabric environment to stage the data temporarily using the Microsoft Fabric OneLake connection. INFACore creates the Microsoft Fabric pyspark DataFrame for these use cases.

CHAPTER 2

July 2023

The following topics provide information about new features, enhancements, and behavior changes in the July 2023 release of Informatica Intelligent Cloud Services INFACore.

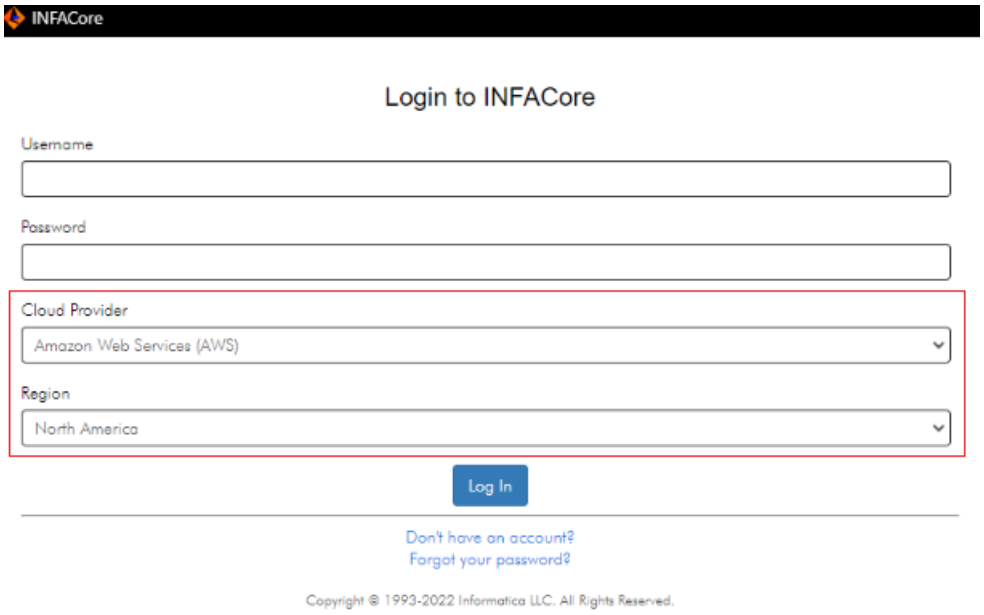

New features and enhancements

The July 2023 release of INFACore includes the following new features and enhancements.

Cloud provider and region

When you log in to INFACore from the JupyterLab extension, the Log In page includes the cloud provider and region fields. The INFACore URL is created dynamically in a production POD. You do not need to explicitly enter the URL in your JupyterLab environment settings to log in to INFACore from JupyterLab in the production POD.

Select the cloud provider and region that correspond to the name of the POD (Point of Deployment) that your organization uses. This release includes only the Amazon Web Services (AWS) cloud provider and North America region.

For staging, test, and sandbox PODs, you need to manually enter the URL in your JupyterLab environment settings to log in to INFACore from JupyterLab.

Use Databricks as intermediate storage

You can use INFACore seamlessly within the Databricks ecosystem. For use cases that require intermediate staging of data, you have the option to configure a Databricks environment to stage the data temporarily. INFACore creates the Databricks native DataFrame for these use cases.

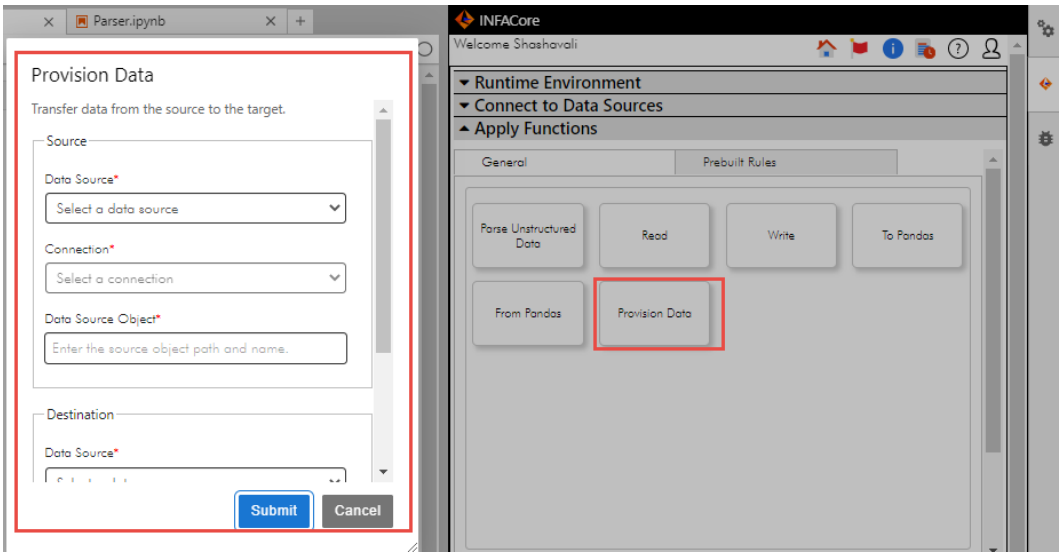

For more information on how to integrate Databricks with INFACore, see the *INFACore SDK for Python* documentation.

Advanced attributes for read and write operations

You can configure advanced attributes in the Python SDK code when you read from or write data to a data source. The advanced attribute options are listed when you call the get_advanced_config() method. To set the value of these attributes, call the set_advanced_config() method. The advanced attributes help you leverage additional functionalities in the data sources. For the list of advanced attributes that you can configure for a data source, see *Connections for INFACore* documentation.

Provision data functionality

You can configure both the read and write operations together using the provision data function. Select the configured source and target connections and run the Python code to read from and write data. The provision data function simplifies the effort of configuring separate read and write operations and saves time.

For more information, see the *JupyterLab Extension for INFACore* documentation.

Changed behavior

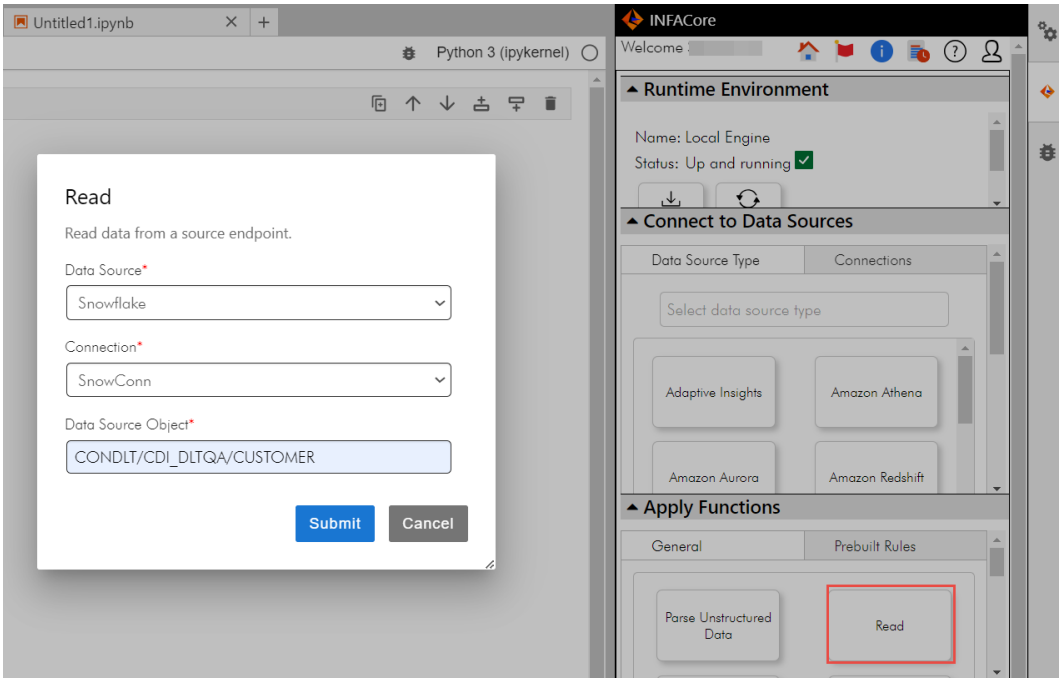

INFACore includes the following changed behaviors in this release.

Decoupling connection input as a dependency in read and write functions

In the JupyterLab extension for INFACore, you can directly configure a read or write operation without the dependency of selecting a data source and connection beforehand. After you select the read or write function, the data source list appears in the read or write dialog box. When you select a data source, all the

connections configured for that data source are fetched and appear in the connections list. Select the connection, enter the data source object name or the target object name based on the endpoint, and then submit the details for the code generation.

If you already select a data source or a data source and connection, the selected data source and connection are prepopulated when you configure the function.

Previously, you had to select the data source and connection first, and then select the read or write operation. You then entered the data source object as an input for the read or write function.
