Preface 4

Chapter 1: Allowlisting IP Address Ranges for Application Integration 5

Index 6

Preface

Use *Allowlisting IP Address Ranges for Application Integration* to learn about the Informatica Intelligent Cloud Services℠ and Application Integration domain names and IP address ranges that you must add to the allowlist of IP addresses.

CHAPTER 1

Allowlisting IP Address Ranges for Application Integration

If your organization uses Application Integration and you use a protective firewall, add the corresponding domain names or IP address ranges to the allowlist of IP addresses.

You need to allow the IP address ranges for the Informatica Cloud Secure Agent and related services to perform all the necessary tasks and for user web browsers to be able to access Application Integration.

You need to add the following entities to your allowlist of IP addresses:

1. The Informatica Intelligent Cloud Services domain name or the IP address ranges
2. The Application Integration domain name or the IP address ranges

   For information about the domain names and IP address ranges that you must add to the allowlist, see POD Availability and Networking.
