Read the Informatica Intelligent Cloud Services℠ *Application Integration Release Notes* to learn about fixed issues and known issues. For information about new features and enhancements, see *What's New*.

Fixed issues

The tables in this section describe recent fixed issues for Application Integration. Note that some releases might not include fixes.

October 2026 fixed issues

Issue	Description
ICAI-62265	When you run a process in the Turbo mode, the process fails due to an extra root element that gets added to the process object payloads, thereby causing payload corruption.
ICAI-60756	When you open a guide in the modern view, Embedded Guide steps with multiple outcomes do not display their outcome branches.
ICAI-59156	In the Turbo mode, when you run a process that uses the `fn:string-join(request:getResourcePathSegments(),'/')` within a step, it flattens the path segments with spaces instead of preserving the `/` separators. This potentially breaks the process that relies on resource path parsing.
ICAI-59008	A data access service connector does not display data from TABLE type tables of a Snowflake database.
ICAI-45666	When you send a properly formed SOAP request to a MessageEvent endpoint, the request fails because the service incorrectly validates an extra field and returns an error.

April 2026 fixed issues

Issue	Description
ICAI-58966	If a process that was published more than 15 months ago already has its GUID recorded as `NOT_FOUND` in the database, its `FRS_ID` field displays `NOT_FOUND` in the Administrator metering dashboard.
ICAI-57721	When you use the update resource to change the password for an Email connection, the REST API resource does not update the password in the target asset although it returns an HTTP 200 OK success response.
ICAI-57049	If you use a REST API to view the details of a faulted process, the **processStateReason** field in the API response shows a null value even if the process logging level is set to **FAULT**.
ICAI-54117	When you insert a date or a timestamp value into a Snowflake database table using the Process Server's **Create** step, the value is treated as Coordinated Universal Time (UTC) and automatically converted to the Secure Agent's local time zone before inserting it.
ICAI-53423	When a process that runs in the Turbo mode uses a Service step with an Object List output, the process fails with an error.

Known issues

The tables in this section describe known issues for Application Integration. Not all monthly releases include known issues.

October 2026 known issues

Issue	Description
ICAI-63022	In the Turbo mode, when you import and publish a process that uses a subprocess with the **AppliesTo** field, the process fails with an error due to missing process object metadata.

July 2026 known issues

Issue	Description
ICAI-50436	If you configure an auto-restart schedule for the Process Server in a sub-organization, the Process Server does not auto restart at the configured date and time.

April 2026 known issues

Issue	Description
ICAI-59008	A data access service connector does not display data from VIEW type tables of a Snowflake database.

Connector and connectivity issues

Read the following pages to learn about fixed issues, known limitations, and third-party limitations that apply to connectors that you can use in your service. Consider the following guidelines for the release notes:

- If a connector has known or fixed issues for your service, you will find it in the following pages even if the connector is not updated in the current release.
- If a connector does not have any notable known or fixed issues for your service, you will not find it in the following pages.
- The (month, year) value in each issue description indicates the release in which the issue was fixed or reported.

Google BigQuery V2 Connector

Fixed issues

The following table describes fixed issues:

Issue	Description
ICAI-58735	You can't publish a Google BigQuery V2 connection when the table contains BIGNUMERIC data type. (October 2026)
ICAI-58684	When you edit a published Google BigQuery V2 connection, apply custom keys on the **Metadata** tab, and save the connection, the updated key might not appear on the **Metadata** tab immediately. Workaround: Refresh the Application Integration page. Additionally, when you open a Google BigQuery V2 connection in the view mode, the **Edit Custom Keys** button is available. (April 2026)

Known issues

The following table describes known issues:

Issue	Description
ICAI-57810	When you use the **Hybrid** connection mode to create a record with a **Record** type field, the Google BigQuery V2 connection displays an error. (April 2026)
ICAI-58735	You can't publish a Google BigQuery V2 connection when the table contains GEOGRAPHY or RANGE data types. (April 2026)
ICAI-58684	When you edit a published Google BigQuery V2 connection, apply custom keys on the **Metadata** tab, and save the connection, the updated key might not appear on the **Metadata** tab immediately. Workaround: Refresh the Application Integration page. Additionally, when you open a Google BigQuery V2 connection in the view mode, the **Edit Custom Keys** button is available. (April 2026)

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the Informatica Intelligent Cloud Services Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
