NOTICES

This Informatica product (the "Software") includes certain drivers (the "DataDirect Drivers") from DataDirect Technologies, an operating company of Progress Software Corporation ("DataDirect") which are subject to the following terms and conditions:

1. THE DATADIRECT DRIVERS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT.
2. IN NO EVENT WILL DATADIRECT OR ITS THIRD PARTY SUPPLIERS BE LIABLE TO THE END-USER CUSTOMER FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES ARISING OUT OF THE USE OF THE ODBC DRIVERS, WHETHER OR NOT INFORMED OF THE POSSIBILITIES OF DAMAGES IN ADVANCE. THESE LIMITATIONS APPLY TO ALL CAUSES OF ACTION, INCLUDING, WITHOUT LIMITATION, BREACH OF CONTRACT, BREACH OF WARRANTY, NEGLIGENCE, STRICT LIABILITY, MISREPRESENTATION AND OTHER TORTS.

Preface

Read the *B2B Gateway What's New* to learn about new features and enhancements in Informatica Intelligent Cloud Services℠ B2B Gateway for the April 2026 release.

CHAPTER 1

April 2026

The April 2026 release of B2B Gateway includes the following updates.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
April 2, 2026	Added	"Optional ISA02 field for EDI 850 messages" on page 7
March 11, 2026	Initial publication	

Important notices

The April 2026 release of B2B Gateway includes the following important notices.

Deprecation notice

Deprecated functionality is supported, but Informatica intends to drop support in a future release. Informatica requests that you transition to different functionality before the functionality is dropped.

Informatica replaces session IDs used for user authentication with JSON Web Tokens (JWT). The organization administrator can change the authentication type used for REST API requests on the **Settings** page in Administrator. If the administrator enables the JSON Web Token (JWT) authentication type, browser-based user interface communications seamlessly use JWT behind the scenes.

For REST API calls, session IDs must still be included in request headers as usual. However, with JWT authentication, the session value carries a JWT with a fixed expiry time configured in Administrator. As a result, REST API scripts need to be updated to handle automatic re-authentication before or after the token expires. For more information, see the JWT Support Knowledge article.

Session-based authentication is the default authentication type. Some time after the April 2026 release, JWT will be the default authentication method. By October 2026, session-based authentication will no longer be available.

New features and enhancements

The April 2026 release of B2B Gateway includes the following new feature and enhancement.

Support for new message types with the EDI X12 8010 message formatting standard

B2B Gateway supports the following new message types with the EDI X12 8010 message formatting standard:

- 431
- 434
- 437
- 475
- 838

For more information, see *B2B Gateway*.

Support for the new EDIFACT Delivery Just-In-Time message type of version 97A

B2B Gateway supports the new Delivery Just-In-Time (DELJIT) message type of version 97A of the EDIFACT standard.

For more information, see *B2B Gateway*

Changed behavior

The April 2026 release of B2B Gateway includes the following changed behavior:

Support for creating mapping task in the same folder as the Partner configuration

You can create a mapping task in the same folder where the partner configuration resides. A new optional **Mapping Task Location** list is available in the organization settings in B2B Gateway . The list includes **Default** and **Partner** as values. When you set the location as **Partner**, mapping tasks are created in the same folder as the partner configuration. Saving mapping tasks and partner configurations in the same location makes it easy to locate and manage related assets.

Note: You must have the CRUD permissions for the default and the partner folder to create the mapping task in the selected location.

Previously, you could create the mapping task only in the default location.

For more information, see *B2B Gateway*.

Optional ISA02 field for EDI 850 messages

You can configure the **ISA02** field as optional for the EDI 850 messages to reduce validation errors and streamline purchase order processing.

Previously, the **ISA02** field was required for the EDI 850 messages.

For more information, see *B2B Gateway*.

CHAPTER 2

October 2025

The October 2025 release of B2B Gateway includes the following updates.

New features and enhancements

The October 2025 release of B2B Gateway includes the following new features and enhancements.

Support for new message types

B2B Gateway supports the following new message types:

- 212 message type with the EDI X12 4010 message formatting standard
- 431 message type with the EDI X12 7010 message formatting standard
- 434 message type with the EDI X12 7010 message formatting standard
- 437 message type with the EDI X12 7010 message formatting standard
- 475 message type with the EDI X12 7010 message formatting standard

Support for new Tax Control (TAXCON) message types

B2B Gateway supports the following new Tax Control (TAXCON) message types:

- 99B
- 06B

Parameterization support with a local configuration file

You can pass a configuration file to a Data Integration mapping task to parameterize the source connection.

Define the following predefined parameters in the partner creation page:

- **b2bgw_mtt_param_file_config_folder**. Set this parameter value to the folder where the configuration file is saved. You must save the configuration file on your local machine.
- · **b2bgw_mtt_param_file_config_file_name**. Set this parameter value to the name of the configuration file.

Note: The folder name and file name that you provide must match the format that is used in Data Integration.

The configuration file must reside locally on the agent and be accessible to all agents within the group.

At run time, the mapping task uses the local configuration file to get the parameter values.

For more information, see *B2B Gateway* help and *Data Integration* help.

Changed behavior

The October 2025 release of B2B Gateway includes the following changed behavior:

Unified metering for B2B Gateway and Industry Solutions

You can view metering information for both B2B Gateway and Industry Solutions in the new unified **B2B & Industry Solutions** section on the **Metering** tab of Administrator. The new meter provides a centralized and simplified way to track the consumption for B2B Gateway and Industry Solutions.

Previously, metering information for B2B Gateway and Industry Solutions appeared under their own sections.

For more information, see *Organization Administration* in the Administrator help.

CHAPTER 3

July 2025

The July 2025 release of B2B Gateway includes the following updates.

New features and enhancements

The July 2025 release of B2B Gateway includes the following new features and enhancements.

Support for new message types

B2B Gateway supports the following new message types:

- 835 message type with EDI X12 4010 message formatting standard
- 835 message type with EDI X12 5010 message formatting standard
- 837 message type with EDI X12 4010 message formatting standard
- 837 message type with EDI X12 5010 message formatting standard

Support for EDI X12 2040 formatting standard for existing X12 message types

B2B Gateway supports the EDI X12 2040 formatting standard for the following message types:

- 810
- 850
- 856

For more information, see *B2B Gateway*.

CHAPTER 4

April 2025

The April 2025 release of B2B Gateway includes the following updates.

New features and enhancements

The April 2025 release of B2B Gateway includes the following new features and enhancements.

REST API to reprocess multiple file-level events

You can reprocess multiple file-level events using the new reprocess event REST API and generate new reprocessed events from the existing events.

To reprocess one or more events, use a POST request with the following URL:

```
https://b2bgateway.<pod>.<baseUrl>/b2b-gw/api/v1/event/reprocess
```

In the request body, you can use a ',' comma separator to provide a list of event IDs that need to be reprocessed.

Run Partner REST API enhancements

You can include the advanced session properties of a mapping task in the Run Partner API that you use to run partner flows. Use the **mctAdvSessionProperties** object to define key-value pairs of advanced session properties.

For example, you can configure the amount of buffer memory that is used to move a block of data from the source to the target in the advanced session properties.

For more information, see *B2B Gateway*.
