B2B Gateway
Quick Start

Use Informatica Cloud B2B Gateway to manage your data integration with your external trading partners. With B2B Gateway you can manage your partners and expedite partner onboarding. Monitor and track your data exchange with your partners with full visability of file events.

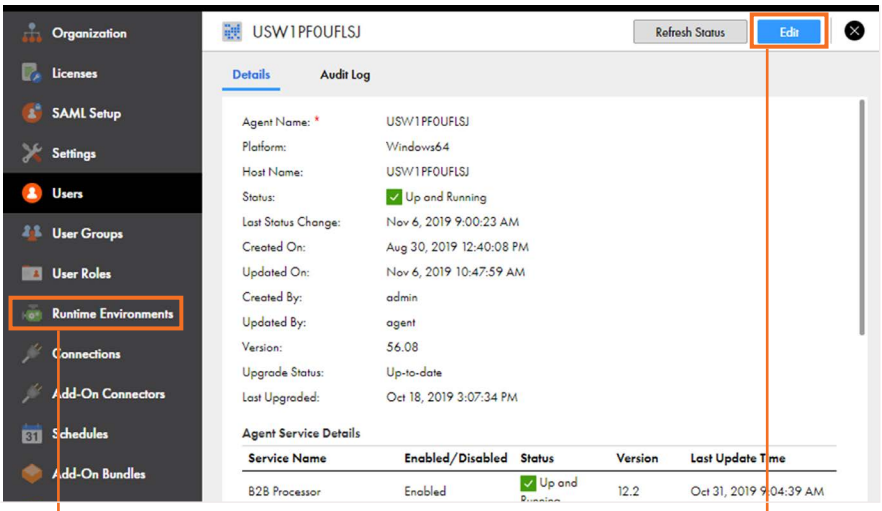

B2B Gateway simplifies the order-to-cash and procure-to-pay cycles and reduces the cycle time with end-to-end processing and handling of the exchange of Electronic Data Interchange (EDI) messages with your partners, including the X12 and EDIFACT EDI standards. If any of your partners do not use EDI, you can use B2B Gateway to exchange any other type of file, for example, CSV, XML, or Excel files..

Use this quick start to set up your organization, create a partner, and monitor file events.

Set up a Secure Agent

Set up a Secure Agent to enable runtime processing in B2B Gateway and exchange messages with your partners.

Using Administrator:

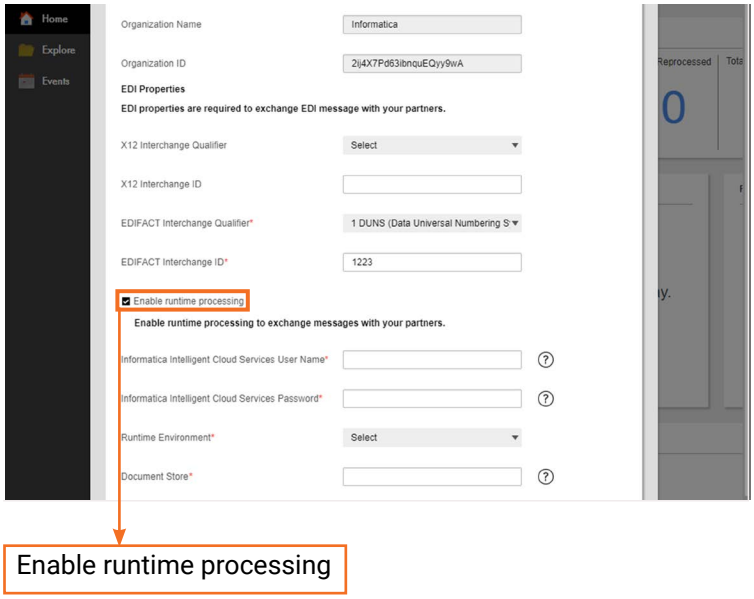

1. Download and install the Secure Agent, and then register the agent.

   Learn about installing Secure Agents here.

2. Optionally, configure the Secure Agent properties for your runtime environment.

Note: If you are not ready to set up a Secure Agent, you can still create partners by completing step 1 below.

Set up your organization in B2B Gateway

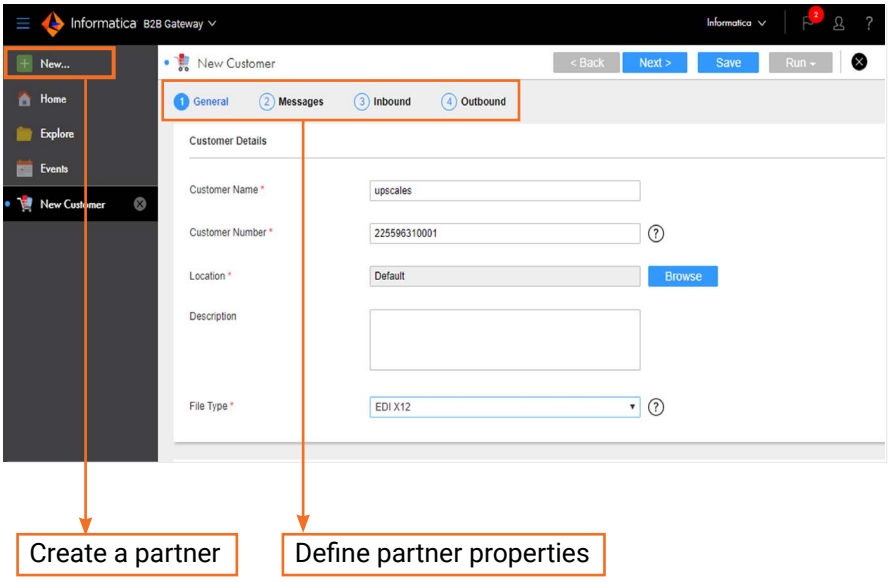

In B2B Gateway:

1. Configure organization settings and EDI properties.
2. Enable runtime processing. Runtime processing is required to exchange messages with your partners.
3. Configure the document store where B2B Gateway stores all the files that you exchange with your partners. The document store must be accessible by the Secure Agent.

Learn about organization settings here.

Create a partner

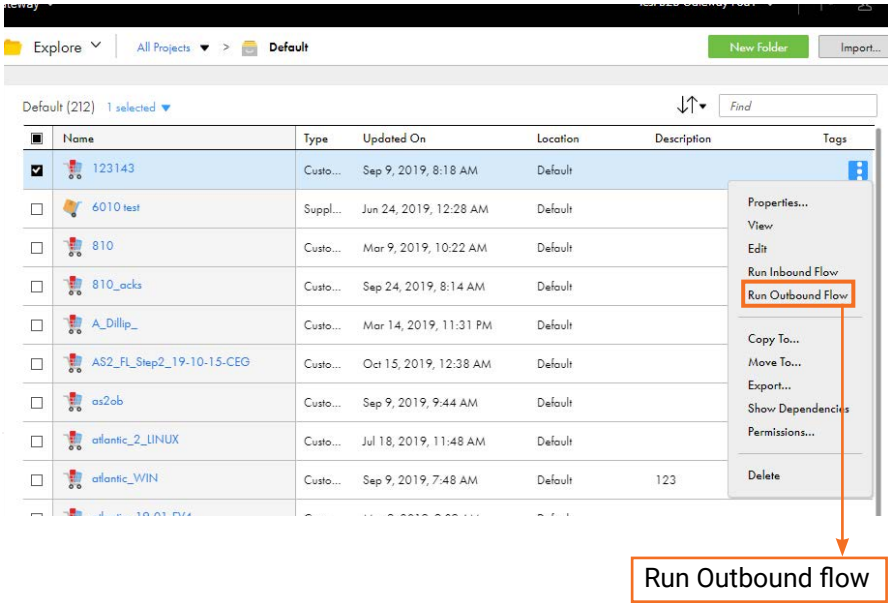

Using B2B Gateway:

1. Define the partner.
2. Select the type of files that you exchange with the partner.
3. Add and configure messages.
4. Define the inbound flow connection details, select a mapping to move files to your backend system, and set the schedule for the flow.
5. Define the outbound flow connection details, select a mapping to move files from your backend system, and set the schedule for the flow.

Learn about creating a partner here.

Run the partner flow

Using B2B Gateway:

Run the partner flow. You can run a flow manually or configure the flow to run by a schedule or file listener.

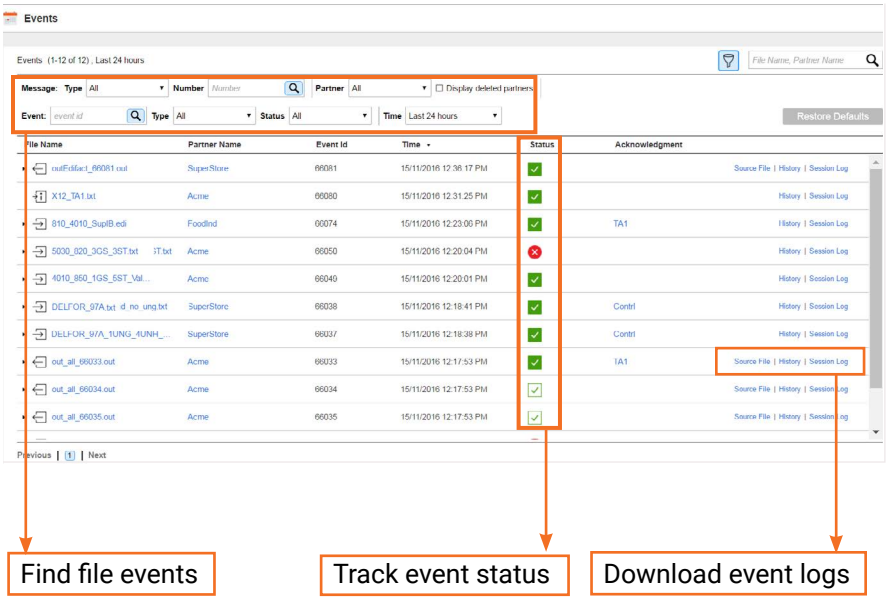

To run a flow manually, perform one of the following tasks:

- After you save the partner, in the partner management wizard, click **Run.**
- On the **Explore** page, open the project that contains the partner. Click **Actions** against the partner and then click **Run Inbound Flow** or **Run Outbound Flow.**

Learn about running a partner flow here.

Monitoring file events

Track and monitor events on the **Events** page. B2B Gateway creates an event for each file that it processes.

Using B2B Gateway:

1. Click **Events**.
   You can view the status of each file event and download session logs to troubleshoot event errors.

2. To view message details for the file event, click the file name.

Learn more about monitoring file events here.
