NOTICES

This Informatica product (the "Software") includes certain drivers (the "DataDirect Drivers") from DataDirect Technologies, an operating company of Progress Software Corporation ("DataDirect") which are subject to the following terms and conditions:

1. THE DATADIRECT DRIVERS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT.
2. IN NO EVENT WILL DATADIRECT OR ITS THIRD PARTY SUPPLIERS BE LIABLE TO THE END-USER CUSTOMER FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES ARISING OUT OF THE USE OF THE ODBC DRIVERS, WHETHER OR NOT INFORMED OF THE POSSIBILITIES OF DAMAGES IN ADVANCE. THESE LIMITATIONS APPLY TO ALL CAUSES OF ACTION, INCLUDING, WITHOUT LIMITATION, BREACH OF CONTRACT, BREACH OF WARRANTY, NEGLIGENCE, STRICT LIABILITY, MISREPRESENTATION AND OTHER TORTS.

Step 1. Copy and access the recipe 9

Step 2. Configure and publish the Snowflake Cortex AI connection 10

Step 3. Configure and publish the processes 10

Step 4. Invoke the process 11

Preface

Use *Snowflake Cortex AI Chat with File* to learn how to upload a file with context, provide a user prompt, read the text from the file, and answer the user's questions using the file content and the Snowflake Cortex Large Language Model (LLM). This guide assumes that you have an understanding of the Snowflake Cortex AI Connector concepts.

CHAPTER 1

Introduction to Snowflake Cortex AI Chat with File recipe

The Snowflake Cortex AI Chat with File recipe is based on REST and SOAP APIs. You can ask questions to the Snowflake Cortex Large Language Model (LLM) based on the context of the uploaded file.

The recipe allows you to upload a file with context, provide a user prompt, read the file context, and answer the user's questions based on the file context using the Snowflake Cortex LLM.

You can upload files up to 100 MB in size, with a maximum of 300 pages per document. Documents must be encrypted on the server-side, and the font size must be 8 points or larger for optimal results.

You can upload files of the following formats:

`.pdf`, `.pptx`, `.docx`, `.jpeg`, `.jpg`, `.png`, `.tiff`, `.tif`

Note: If the uploaded file is empty or the question is not related to the file context, an error occurs.

Prerequisites

To use the Snowflake Cortex AI Chat with File recipe, the following prerequisites must be met:

You must create a stage in the Snowflake Web UI with the Snowflake server-side encryption enabled and upload your files to the stage.

To create a stage in Snowflake Web UI, use the following snippet in the Snowflake worksheet:

```
CREATE STAGE <stage_name> DIRECTORY = ( ENABLE = true ) ENCRYPTION = ( TYPE =
'SNOWFLAKE_SSE' );
```

To upload a file to the Snowflake stage, you can perform one of the following steps:

- Using the Snowflake Web UI.
  1. Open the stage where you want to upload a file.
  2. Click **Files** > **Browse** and select the file from your local machine.
  3. Click **Upload**.
- Using the PUT command at the command prompt.
  To upload a document to the stage, you must use the following query in the terminal window:

  ```
  snowsql -a <your accountIdentifier> -u <username> -d<database> -s <schema>
  ```

  Enter the password. After that use the following PUT command to add the file to the Snowflake stage:

  ```
  PUT 'file:path' @stage AUTO_COMPRESS = FALSE;
  ```

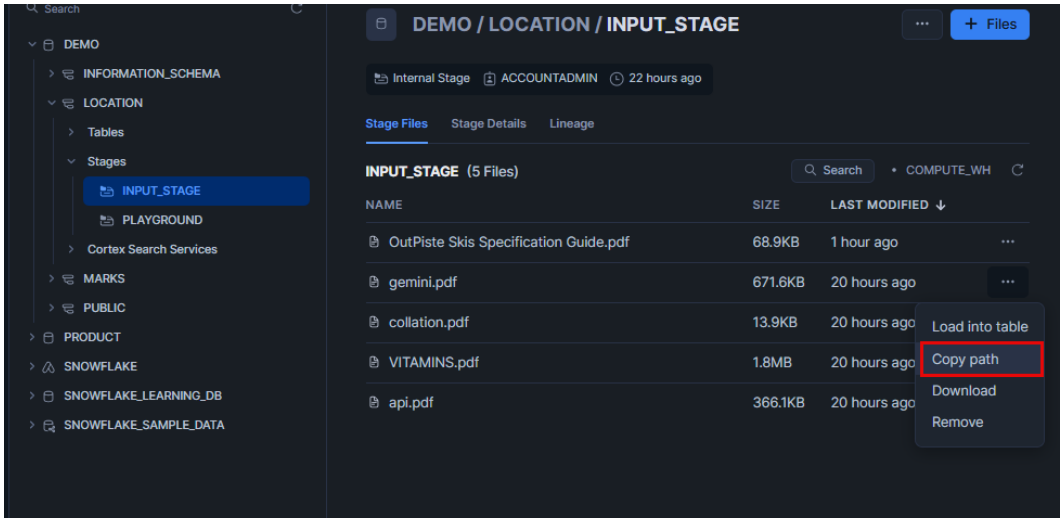

Note: Ensure that you use `AUTO_COMPRESS = FALSE`. Otherwise, the file will be compressed.

The file appears in the **Stage Files** tab of the Snowflake stage.

After uploading the file, you must get the stage path to invoke the process.

To get the stage path, perform the following steps:

1. In the Snowflake Web UI, go to **Data** > **Databases** and select the database.
2. In the **Schemas** tab, select the schema.
3. In the **Stages** tab, select the stage where you have uploaded the file.
4. Click the **Actions** menu corresponding to the file and click **Copy path** as shown in the following sample image:

In this image, `DEMO` is the database, `LOCATION` is the schema, and `INPUT_STAGE` is the stage.

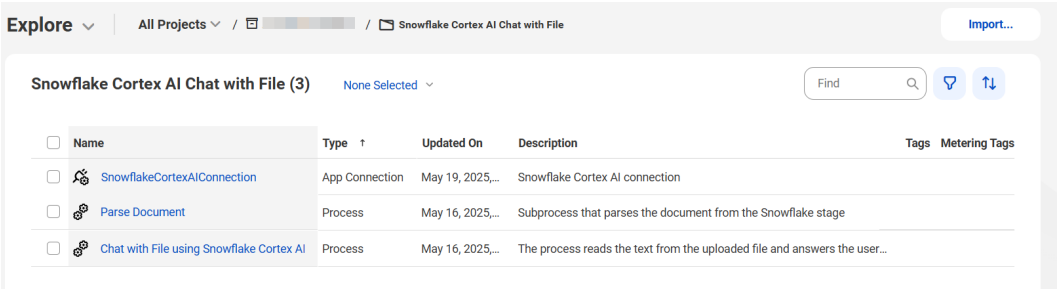

When you copy the path as shown in the above sample image, you will get the path as `'@"DEMO"."LOCATION"."INPUT_STAGE"/collation.pdf'`, where stage path is `@DEMO.LOCATION.input_stage` and the file name is `collation.pdf`. You'll need these values while invoking the process.

CHAPTER 2

Snowflake Cortex AI Chat with File recipe contents

The Snowflake Cortex AI Chat with File recipe contains an app connection and two processes.

The following image shows the assets that the Snowflake Cortex AI Chat with File recipe package contains:

Snowflake Cortex AI Chat with File recipe assets

The following table lists the assets that the Snowflake Cortex AI Chat with File recipe package contains:

Asset Name	Asset Type	Description
SnowflakeCortexAIConnection	App connection	Snowflake Cortex AI connection.
Parse Document	Process	Subprocess that parses the document from the Snowflake stage.
Chat with File using Snowflake Cortex AI	Process	The process reads the text from the uploaded file and answers the user's questions using the file content and the Snowflake Cortex Large Language Model (LLM).

CHAPTER 3

Using the Snowflake Cortex AI Chat with File recipe

To use the Snowflake Cortex AI Chat with File recipe, you must perform the following steps manually:

1. Copy and access the recipe.
2. Configure and publish Snowflake Cortex AI connection.
3. Configure and publish the processes.
4. Invoke the process.

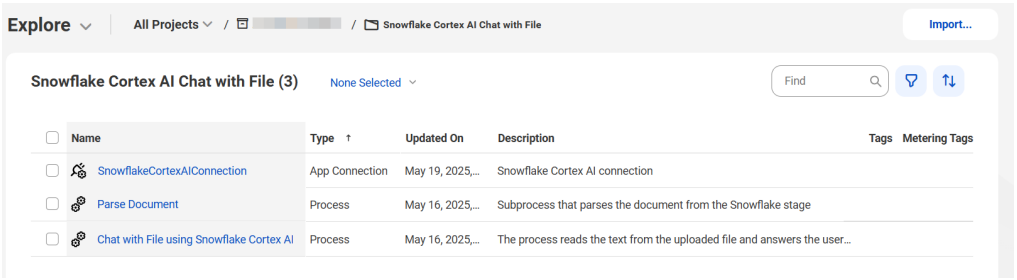

Step 1. Copy and access the recipe

Copy the pre-configured assets in the recipe to a separate project or folder.

1. Open the **Snowflake Cortex AI Chat with File** recipe and click **Use**.
2. Select the location where you want to copy the recipe, and then click **Continue**.
3. In the **Copying the recipe** dialog box, click **OK**.

   It might take some time for the recipe to get copied. You will receive a notification when the recipe is ready for use.
4. After the recipe is copied, click **Explore** to access the recipe content.
5. Navigate to the project or folder where you copied the recipe or enter the recipe name in the **Find** box.

   All the assets in the recipe are displayed as shown in the following image:

Step 2. Configure and publish the Snowflake Cortex AI connection

Configure the account identifier, user name, private key, and public key fingerprint to access the Snowflake instance, and then publish the SnowflakeCortexAIConnection connection.

1. Open the **SnowflakeCortexAIConnection** connection.
2. From the **Type** list, select **Snowflake Cortex AI**.
3. In the **Connection Properties** section, enter values for the following properties:

Property	Description
Account_Identifier	The identifier used to access the Snowflake account. The account identifier must not contain underscores (_). If underscores (_) are present, you must replace them with hyphens (-).
User_Name	The identifier representing a specific user account for authentication.
Private_Key	A secret cryptographic key used to digitally sign authentication requests and prove identity.
Public_Key_Finger_Print	A short, unique representation of the user's public key used to verify the authenticity of the corresponding private key.

4. Save and publish the connection.

Step 3. Configure and publish the processes

Configure the mode if required and publish the process.

1. To publish the **Parse Document** process, click **Actions** in the row that contains the process and select **Publish**.
2. Open the **Chat with File using Snowflake Cortex AI** process.
3. On the **Temp Fields** tab of the Start step, the **Mode** field is set to **OCR** by default. You can optionally change the mode value to **LAYOUT**. If you want to exclude tables from the file, select **OCR**. Otherwise, select **LAYOUT**.
4. Save and publish the process.

Step 4. Invoke the process

When you invoke the Chat with File using Snowflake Cortex AI process, the user sees the answer matching the context that was used in the LLM request.

You must pass the following input parameters:

- Stage Path: Name of the Snowflake stage. The stage must be created externally in advance before invoking the process.
- Document Name: Name of the document available in the Snowflake stage. The document must be added to the stage before invoking the process.
- Prompt: The user's question related to the context of the document.

You can run the process using one of the following options:

- Run Using by passing the input parameters
- REST or SOAP API endpoints in any API client such as cURL, Postman, SOAP UI, or any programming language
- Web browser by passing the input parameters

The following image shows the sample input parameters that you can pass using Postman and the response.
