NOTICES

This Informatica product (the "Software") includes certain drivers (the "DataDirect Drivers") from DataDirect Technologies, an operating company of Progress Software Corporation ("DataDirect") which are subject to the following terms and conditions:

1. THE DATADIRECT DRIVERS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT.
2. IN NO EVENT WILL DATADIRECT OR ITS THIRD PARTY SUPPLIERS BE LIABLE TO THE END-USER CUSTOMER FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES ARISING OUT OF THE USE OF THE ODBC DRIVERS, WHETHER OR NOT INFORMED OF THE POSSIBILITIES OF DAMAGES IN ADVANCE. THESE LIMITATIONS APPLY TO ALL CAUSES OF ACTION, INCLUDING, WITHOUT LIMITATION, BREACH OF CONTRACT, BREACH OF WARRANTY, NEGLIGENCE, STRICT LIABILITY, MISREPRESENTATION AND OTHER TORTS.

Step 2: Configure and publish the Salesforce connection 12

Step 3: Configure and publish the Marketo connection 12

Step 4: Configure and publish the process 13

Preface

Use *Synchronize Salesforce Leads with Marketo Leads* to learn how to synchronize Salesforce leads with Marketo leads. This guide assumes that you have an understanding of the Salesforce Connector and Marketo Connector concepts.

CHAPTER 1

Introduction to Synchronize Salesforce Leads with Marketo Leads recipe

The Synchronize Salesforce Leads with Marketo Leads recipe is a platform event-based recipe.

When a lead is created or updated in Salesforce, a Salesforce Change Data Capture event triggers the process. The process checks whether the email for the Salesforce lead exists in Marketo. If the lead email doesn't exist, the process displays an error. If the lead email exists, the process searches for leads by the Salesforce ID in Marketo and creates or updates the leads based on the search results. The process requires Secure Agent and Salesforce Change Data Capture configuration.

Note: The recipe assumes that email is the only required field for leads.

Prerequisites

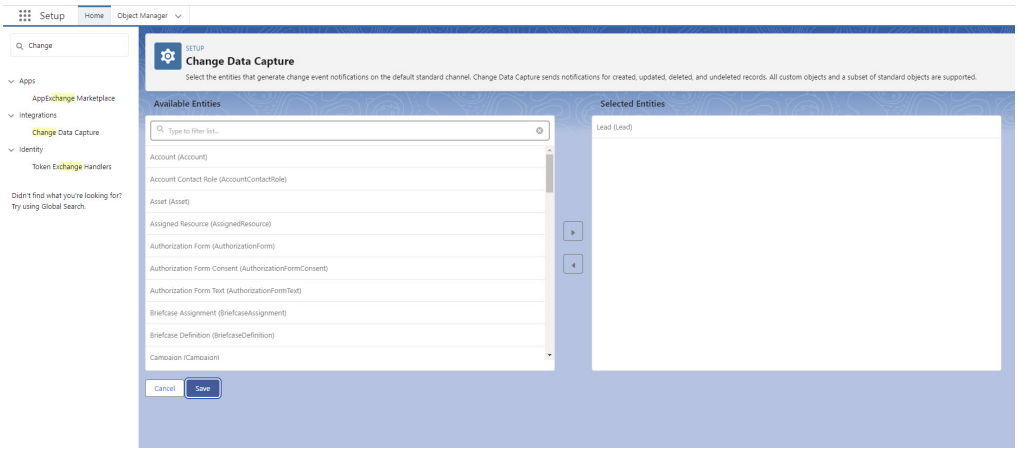

To synchronize a Salesforce lead with a Marketo lead, the following prerequisites must be met:

- Configure Salesforce Change Data Capture (CDC) event.
- Create a custom field in Marketo.

Configuring Salesforce Change Data Capture

Configure Salesforce Change Data Capture (CDC) to send a message when the lead object changes.

1. Log in to the Salesforce account.
2. Go to **Setup** and search for Change Data Capture in the **Find** box.
3. Select **Lead (Lead)** object from the **Available Entities** list and add it to the **Selected Entities** list. The following image shows the **Change Data Capture** page:

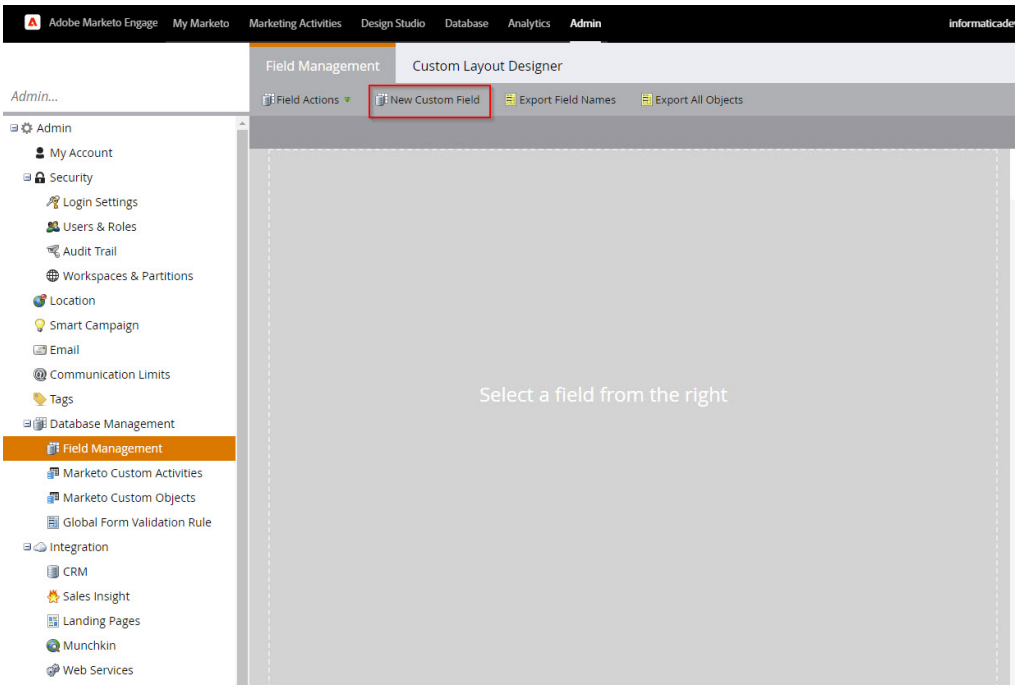

4. Click **Save**.

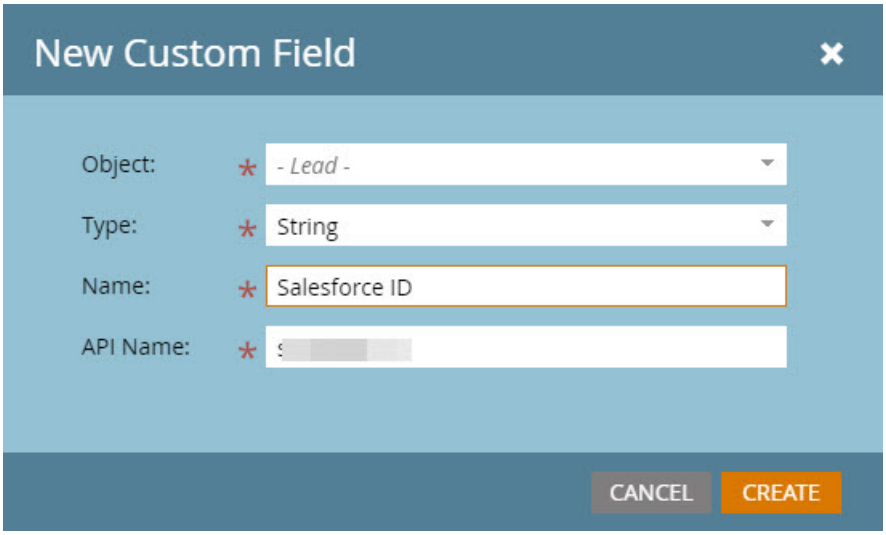

Creating a custom field in Marketo

Create a custom field in Marketo to store the Salesforce ID.

1. Log in to the Marketo organization.
2. Go to **Admin** > **Field Management**, and then click **New Custom Field**.
   The following image shows the **New Custom Field** button on the **Field Management** page:

3. In the **New Custom Field** page, enter the object, type, and name values as shown in the following image, and then click **Create**.

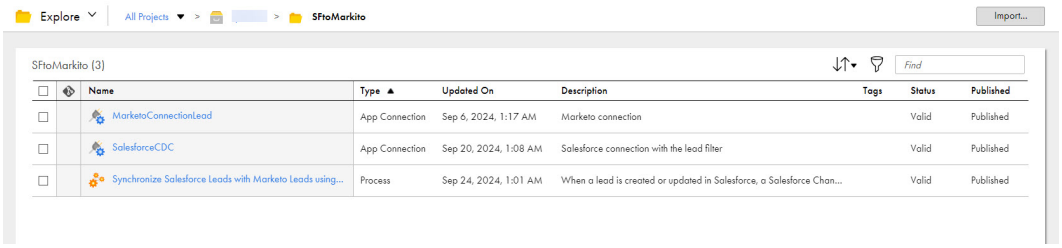

Note: In the **API Name** field, enter the value as **salesforseID**.

CHAPTER 2

Synchronize Salesforce Leads with Marketo Leads recipe contents

The Synchronize Salesforce Leads with Marketo Leads recipe contains app connections and a process.

The following image shows the assets that the Synchronize Salesforce Leads with Marketo Leads recipe package contains:

Synchronize Salesforce Leads with Marketo Leads recipe assets

The following table lists the assets that the Synchronize Salesforce Leads with Marketo Leads recipe package contains:

Asset Name	Asset Type	Description
MarketoConnectionLead	App connection	Marketo connection.
SalesforceCDC	App connection	Salesforce connection with the lead filter.
Synchronize Salesforce Leads with Marketo Leads using CDC	Process	When a lead is created or updated in Salesforce, a Salesforce Change Data Capture event triggers the process. The process checks whether the email for the Salesforce lead exists in Marketo. If the lead email doesn't exist, the process displays an error. If the lead email exists, the process searches for leads by the Salesforce ID in Marketo and creates or updates the leads based on the search results. The process requires Secure Agent and Salesforce Change Data Capture configuration.

CHAPTER 3

Using the Synchronize Salesforce Leads with Marketo Leads recipe

To use the Synchronize Salesforce Leads with Marketo Leads recipe, you must perform the following steps manually:

Step 1: Copy and access the recipe

Step 2: Configure and publish the Salesforce connection

Step 3: Configure and publish the Marketo connection

Step 4: Configure and publish the process

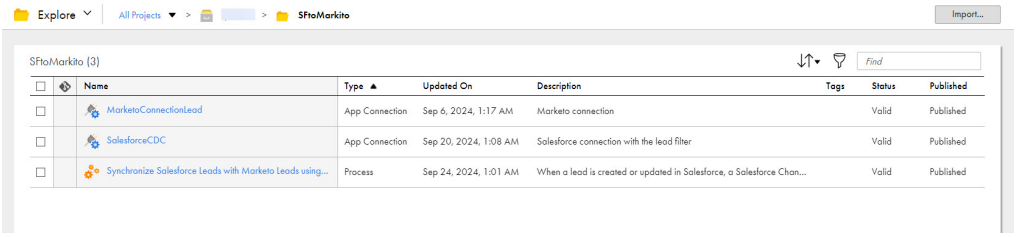

Step 1: Copy and access the recipe

Copy the pre-configured assets in the recipe to a separate project or folder.

1. Open the **Synchronize Salesforce Leads with Marketo Leads** recipe and click **Use**.
2. Select the location where you want to copy the recipe, and then click **Continue**.
3. In the **Copying the recipe** dialog box, click **OK**.

   It might take some time for the recipe to get copied. You will receive a notification when the recipe is ready for use.
4. After the recipe is copied, click **Explore** to access the recipe content.
5. Navigate to the project or folder where you copied the recipe or enter the recipe name in the **Find** box.

   All the assets in the recipe are displayed as shown in the following image:

Step 2: Configure and publish the Salesforce connection

Configure the user credentials, object filter, and event consumer details in the SalesforceCDC connection, and then publish the connection.

1. Open the **SalesforceCDC** connection.
2. From the **Runtime Environment** list, select the **Secure Agent**.
3. In the **Authentication Type** field, select **OAuth** or **Password** as required.

   Based on the authentication type selected, perform one of the following steps:

   - For **Password** authentication, enter values for the following properties:
     - User Name: Salesforce developer account user name.
     - Password: Salesforce developer account password.
     - Security Token: Salesforce security token.
   - For **OAuth** authentication, enter values for the following properties:
     - Authentication URL: Endpoint used to make OAuth authorization requests to Salesforce.
     - Token Request URL: Endpoint used to make OAuth token requests to Salesforce.
     - Session Duration: Number of minutes after which the OAuth token expires.
     - Authorize access: Click **Authorize** > enter Salesforce developer account credentials > click **Allow**.

     The OAuth authentication process starts. You can check the current authorization status in the **Authorization Status** property.
4. In the **Connection Properties** section, enter the **Object Filter** field value as **Lead**.
5. Add an event source on the **Event Sources** tab, and in the **Event Consumer** field, enter `/data/LeadChangeEvent`. With this, the CDC sends a message when the lead object changes.
6. Save and publish the connection.

Step 3: Configure and publish the Marketo connection

Configure the host name, client details, and grant type in the MarketoConnectionLead connection, and then publish the connection.

1. Open the **MarketoConnectionLead** connection.
2. From the **Type** list, select **Marketo**.
3. From the **Runtime Environment** list, select **Cloud Server or any Secure Agent**.

4. In the **Connection Properties** section, enter values for the following properties:

Property	Description
hostName	The munchkin ID of the Marketo instance.
client_id	The Marketo client ID to generate a valid access token. You can find the client ID under the **Admin** > **Integration** > **Launchpoint** menu in Marketo.
client_secret	The Marketo client secret that you generated under the **Admin** > **Integration** > **Launchpoint** menu in Marketo.
grant_type	The grant type that is used by the Marketo instance to get an access token for authorizing third-party clients. Enter the value as **client_credentials**.

5. Save and publish the connection.

Step 4: Configure and publish the process

Configure the Secure Agent and publish the process.

1. Open the **Synchronize Salesforce Leads with Marketo Leads using CDC** process.
2. On the **Start** tab of the Start step, select **Event** in the **Binding** field.
3. In the **Event Source Name** field, select the event source that you added in the **SalesforceCDC** connection.
4. From the **Run On** list, select the Secure Agent.
5. Save and publish the process.

When a lead is created or updated in Salesforce, a Salesforce Change Data Capture event triggers the process. The process receives a message from Salesforce with an event. The process extracts the lead ID and retrieves full information based on the lead ID. The process then checks whether the record contains an email. If the email is missing, the process displays an error. Otherwise, the process performs a search in the database using the custom Salesforce ID field in Marketo. If the Salesforce ID exists in Marketo, the lead is updated. Otherwise, a new record is created and the lead details are synchronized with a Marketo lead.
