Preface

Use *CLAIRE Copilot for Application Integration* to learn how to use natural language prompts to create and summarize assets in Application Integration.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

IDMC Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the IDMC Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Data Integration connector documentation

You can access documentation for Data Integration Connectors at the Documentation Portal. To explore the Documentation Portal, visit https://docs.informatica.com.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security, compliance, and privacy practices.

You can access the trust center at https://trust.informatica.com/.

IDMC Pulse Dashboard

The IDMC Pulse Dashboard provides system status and upgrade information for all PODs and services across IDMC.

Follow the services you use and subscribe to alerts to receive notifications about upgrades, maintenance, production incidents, and upcoming releases. The IDMC Pulse Dashboard displays the production status of all the IDMC products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single service or all IDMC services. Subscribing to all services is the best way to be certain you never miss an update.

For more information, see the Service Status and Communications guide.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Getting started with CLAIRE Copilot

CLAIRE Copilot is a conversational user interface that you can use to create and understand assets in your organization using natural language prompts.

CLAIRE Copilot is available for the following services:

- Application Integration
- Data Integration
- Data Ingestion and Replication
- Customer 360 SaaS
- Product 360 SaaS
- Supplier 360 SaaS
- Multidomain MDM SaaS

You can use CLAIRE Copilot for the following tasks:

Create assets

CLAIRE Copilot can create assets based on a natural language prompt, making it easier and faster than configuring the asset from scratch. If you're just beginning to create assets in your organization, CLAIRE Copilot can help you get started.

In Application Integration, CLAIRE Copilot can help you create processes.

Summarize processes

You can ask CLAIRE Copilot to provide a summary of an existing process. A brief summary returns a high-level overview of the process, and a detailed summary returns information about how every step in the process is configured.

Generate XQuery expressions

Use CLAIRE Copilot in the Process Designer to quickly generate an XQuery expression for any existing process.

Ask questions about IDMC

CLAIRE Copilot can answer questions about information available in the Informatica documentation portal, Knowledge Base articles, and How-To Library articles.

CLAIRE Copilot can't help you with other tasks that aren't listed here.

Enable CLAIRE generative AI services

As an organization administrator, you need to authorize users of your organization to utilize Informatica's CLAIRE services either by enabling CLAIRE generative AI services in Administrator or by providing consent to use CLAIRE services in CLAIRE Copilot.

You can enable CLAIRE generative AI services for your organization in one of the following ways:

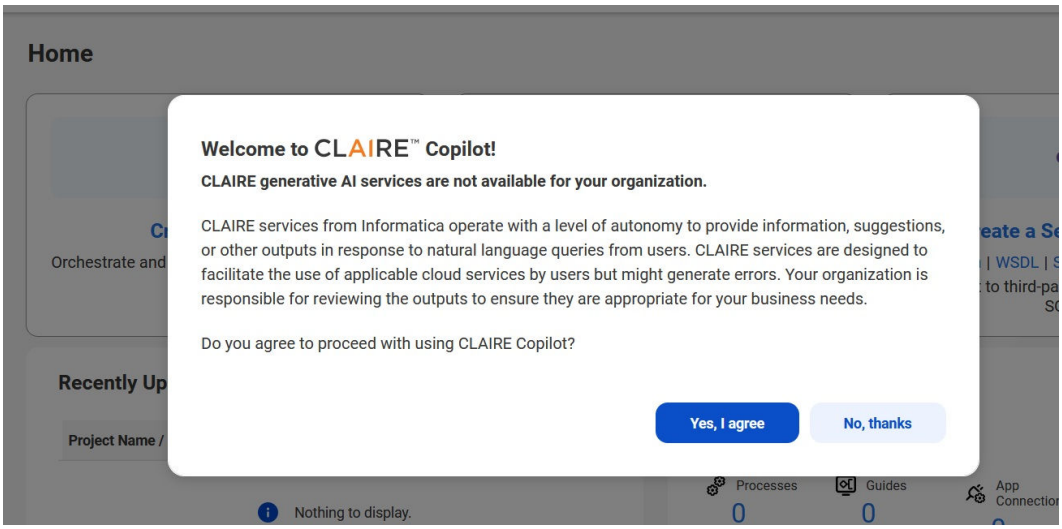

- In Administrator > **Settings**, select **Enable CLAIRE Generative AI Services**.
- Click **Yes, I agree** on the **Welcome to CLAIRE Copilot!** dialog box in your service.

  Note: After you give consent to use CLAIRE services, the **Enable CLAIRE Generative AI Services** check box in Administrator appears enabled.

After you enable CLAIRE generative AI services, tasks run in the background to make CLAIRE available for all users in your organization, and this could take several minutes to complete. You can continue to use other services during this time.

CLAIRE services from Informatica operate with a level of autonomy to provide information, suggestions, or other outputs in response to natural language queries from users. CLAIRE services are designed to facilitate the use of applicable cloud services by users but might generate errors. Your organization is responsible for reviewing the outputs to ensure they are appropriate for your business needs.

The following image shows the consent dialog box in CLAIRE Copilot:

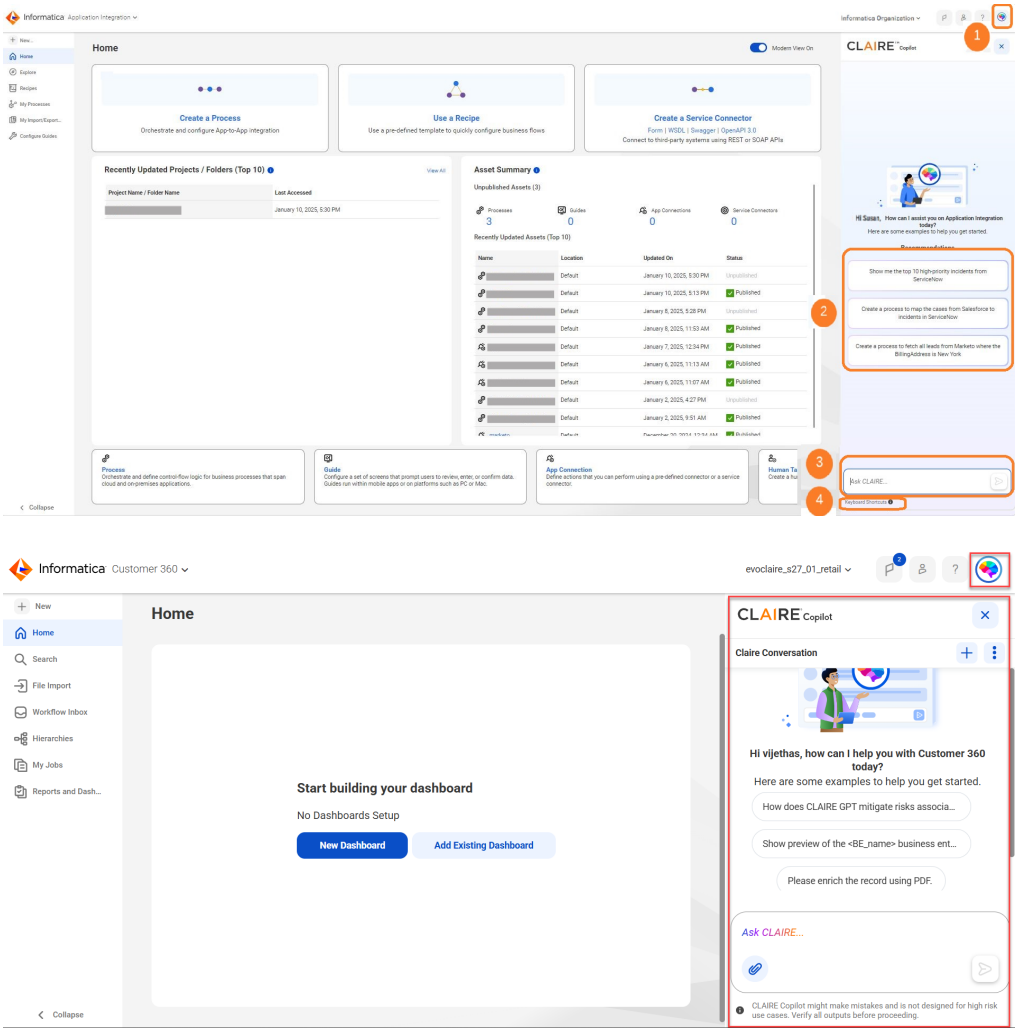

For more information about how to enable CLAIRE generative AI services in Administrator, see *Organization Administration* in Administrator.

Open CLAIRE Copilot and start a conversation

Open CLAIRE Copilot from the **Home** page of your service. When you open CLAIRE Copilot, a conversation window appears where you can start or continue a conversation.

1. On the **Home** page of your service, select the CLAIRE Copilot icon to open the conversation window.

   The following image shows the CLAIRE Copilot icon and the conversation window:

2. Select one of the sample prompts, or type your own prompt in the prompt text box.

   Optionally, hover over the keyboard shortcuts to help you write a prompt.

3. Submit the prompt and wait for CLAIRE Copilot to return a response.

   To cancel a prompt, select **Stop generating response** before CLAIRE Copilot displays the response.

Create an asset

Use CLAIRE Copilot to create an asset by describing your use case in the conversation window. When CLAIRE Copilot processes the use case, it determines the best asset type for the use case, configures the asset, and creates it.

You can specify all of the asset details in the first prompt, or you can let CLAIRE Copilot ask you for the details it needs. Then, you can ask CLAIRE Copilot to create the asset and open it. In the asset editor, you can edit the asset manually and save it, or you can discard it and start a new conversation with CLAIRE Copilot.

If you make changes to the asset and the asset is saved and valid, you can ask CLAIRE Copilot to summarize the updated asset.

When you open the asset in the future, the conversation history with CLAIRE Copilot remains available. To view the conversation history that's associated with an asset, open the asset and then open CLAIRE Copilot.

Summarize an asset

CLAIRE Copilot can summarize assets to help you understand how they're configured. To summarize an asset, the asset must be saved and valid.

CLAIRE Copilot can create the following types of summaries:

Brief summary

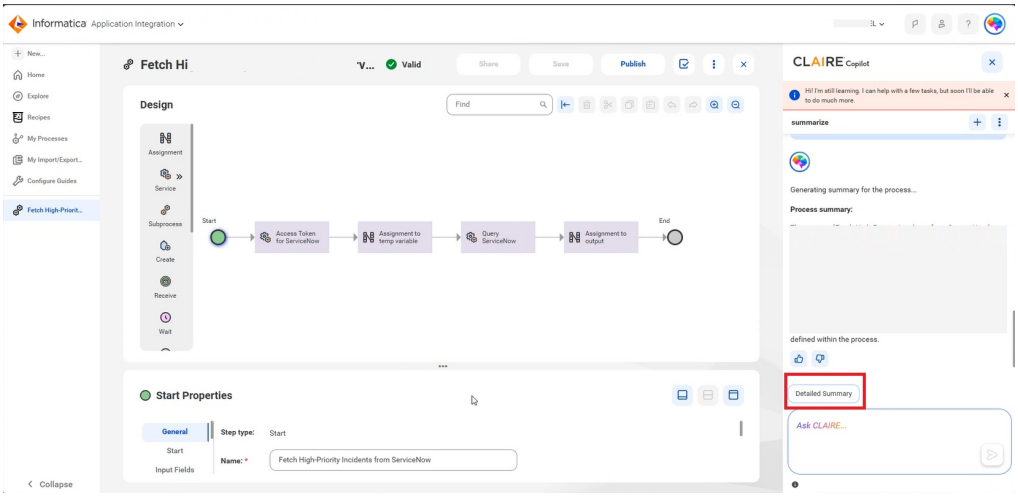

A brief summary is a high-level summary that helps you quickly understand what a process does, the data sources it uses, and its purpose.

To get a brief summary, enter the prompt `Summarize` or `Summarize this process`.

Detailed summary

A detailed summary explains every step of the process to help you understand how each part is configured.

To get a detailed summary, click the **Detailed Summary** option as shown in the following image:

You can ask CLAIRE Copilot to summarize an asset while CLAIRE Copilot is helping you create it so that you can understand the configurations that have been made so far.

Note: The types of summaries that CLAIRE Copilot can create depend on each service. For more information, see the help for the appropriate service.

Ask questions about the Informatica help

CLAIRE Copilot can answer questions about IDMC on the Informatica Documentation Portal, in Knowledge Base articles, and in How-To Library articles.

CLAIRE Copilot has access to the following documentation:

- Informatica Documentation Portal
- Knowledge Base articles
- How-To Library articles

You can ask CLAIRE Copilot questions about the functionality that's available in IDMC, how to create assets, how to resolve errors, and best practices. You can also ask CLAIRE Copilot about its own capabilities.

For example, you can ask the following question:

```
What can CLAIRE Copilot do today in Application Integration?
What can CLAIRE Copilot do today in Master Data Management?
```

Use the following guidelines to improve responses:

Provide context for the question.

Provide the the context, details, and service name for CLAIRE Copilot to understand how and where it can find the answer to your question in the Informatica help.

For example, the following questions specify the service name:

```
How do I use CLAIRE Copilot to create a process in Application Integration?
How to manage hierarchical relationships for customers in Customer 360?
```

Rephrase the question.

CLAIRE Copilot answers questions based on the information that's available in the Informatica help. If CLAIRE Copilot doesn't return the answer you expected, try rephrasing the question or using terminology from the Informatica help.

For example, if CLAIRE Copilot doesn't understand `basic summary`, try `brief summary`.

Get the best results from CLAIRE Copilot

To get the best results from CLAIRE Copilot, use the guidelines to learn how to interact with CLAIRE Copilot and submit prompts that improve the output you receive.

Interacting with CLAIRE Copilot

Use the following guidelines to improve how you interact with CLAIRE Copilot:

Open CLAIRE Copilot in the appropriate service.

To create or summarize a process, open CLAIRE Copilot in Application Integration.

Create assets on the Home page.

Before asking CLAIRE Copilot to create an asset, navigate to the **Home** page of your service and then open the conversation window.

Validate, save, and run assets manually.

CLAIRE Copilot can't validate, save, publish, or run assets. To validate, save, publish, or run an asset, open the asset editor and select the appropriate option.

Open a process, and then summarize it.

For existing processes, open the process in the Process Designer, and then ask CLAIRE Copilot to summarize it.

Creating assets

Use the following guidelines to improve the prompts that you use to create assets:

Gather all details to create the asset.

Before you ask CLAIRE Copilot to create an asset, gather all the details you need. To create an asset in Application Integration, gather details about the connections and objects.

Provide all details in the first prompt.

To improve performance, provide all details in the first prompt that you submit to CLAIRE Copilot.

Be clear and concise in prompts.

Be clear and concise when you write prompts. Tell CLAIRE Copilot exactly what you want it to do and in the appropriate order.

Use keyboard shortcuts to help you write prompts.

You can use the following keyboard shortcuts:

- To view the sample prompts, type `#` in the prompt text box.
- To reference objects in the organization, type `@` in the prompt text box. CLAIRE Copilot displays a list of objects that you can select from.
- To access previously sent prompts, use the **Up** and **Down** arrow keys. You can resend the same prompt, or press **Tab** to modify it first.

Review the asset description before opening the asset.

Before you ask CLAIRE Copilot to open the asset, review the asset description to make sure that all configurations are present and correct.

After you open an asset, CLAIRE Copilot can't make any more changes to the asset and you can edit it only manually.

Leave feedback

We welcome feedback on your experience with CLAIRE Copilot. You can use the **Like** and **Dislike** icons to rate responses. To provide more details, select **Add Comments** or send an email to `copilot-feedback@informatica.com`.

If you need to report an issue, you can copy the conversation ID from the **Actions** menu of the conversation window. Include the conversation ID in the issue.

Informatica carefully reviews your feedback and uses it to improve CLAIRE Copilot for everyone.

Clear conversation memory

CLAIRE Copilot remembers the prompts and responses during your conversation so it can help you continue working on the same asset.

If you don't want CLAIRE Copilot to refer to information in previous prompts and responses, you can clear the conversation memory. For example, you might want to clear the conversation memory if you want to start working on a new asset.

You can clear the conversation memory in one of the following ways:

- Start a new conversation. To start a new conversation, click the **Plus** icon. CLAIRE Copilot clears its memory and resets the conversation window.
- Enter the prompt `Start Over`. CLAIRE Copilot clears its memory but you can still see the previous conversation in the conversation window.

CHAPTER 2

Using CLAIRE Copilot with Application Integration

Use CLAIRE Copilot to help you create and summarize processes in Application Integration, and to answer questions about the Informatica help. You can specify a use case and CLAIRE Copilot configures a process with the required objects and connections based on the use case.

You can use CLAIRE Copilot for the following tasks:

Create processes

You can ask CLAIRE Copilot to create a process by describing a use case and data flow in the conversation window.

Summarize processes

You can ask CLAIRE Copilot to provide a summary of an existing process. A brief summary returns a high-level overview of the process, and a detailed summary returns information about how every step in the process is configured.

Generate XQuery expressions

Use CLAIRE Copilot in the Process Designer to quickly generate an XQuery expression for any existing process.

Ask questions about Application Integration

CLAIRE Copilot can answer questions to help you use Application Integration. For example, you can ask CLAIRE Copilot about processes and connections so that you can use the information to write a process prompt.

Prerequisites

Complete prerequisite tasks to use CLAIRE Copilot in Application Integration.

Before you use CLAIRE Copilot in Application Integration, perform the following tasks:

- Configure a runtime environment that's up and running. You can use a Secure Agent group or the Hosted Agent.
- Ensure that the connections and service connectors that you want to use in the process are published.

For more information, see *Getting Started* or see the Administrator help.

Rules and guidelines

Consider the following rules and guidelines when you use CLAIRE Copilot to create a process:

- CLAIRE Copilot runs the process on the Cloud Server by default. However, you can change the runtime environment manually.
- You can create only one process at a time. If you access CLAIRE Copilot from multiple tabs or windows concurrently, the results might be inaccurate.

Create a process

In CLAIRE Copilot, you can quickly and easily create a process by describing a use case and data flow in the conversation window.

CLAIRE Copilot guides you through the following high-level configuration steps:

1. Select an object.
2. Select a connection. CLAIRE Copilot can create processes using the following connections:

   Amazon Bedrock

   Azure OpenAI

   Coupa

   Gemini

   Jira

   Marketo

   Microsoft Dynamics 365

   NetSuite

   OpenAI

   Salesforce

   ServiceNow

   Slack

   Published service connectors
3. Review the generated summary of the process. If it's correct, click **Yes** to create the process and open it in the Process Designer.

Note: If the process integrates two or more applications, you might need to repeat steps 1 and 2.

CLAIRE Copilot generates and opens the process in the Process Designer. You can finalize it by customizing the process or adding fields. Then, save, publish, and run the process.

For best results, provide as much detail as possible in the first prompt that you submit. If you don't provide all the required details that CLAIRE Copilot needs to create a process in the first prompt, CLAIRE Copilot asks you to provide them, such as the connections or objects. If CLAIRE Copilot gives you a list of options for connections and objects to choose from, you can enter the name or number of the list item. Otherwise, you can type of the name of the connection or object in the prompt text box.

When CLAIRE Copilot has enough information to create the process, it generates a brief summary that you can review. You can continue making changes to the process in the conversation window, or you can ask CLAIRE Copilot to create it and open it.

Note: After CLAIRE Copilot opens the process, you can no longer edit the asset in the conversation window, but you can continue to make edits manually.

Generate XQuery expressions for processes

Use CLAIRE Copilot in the Process Designer to quickly generate an XQuery expression for a process. The process must be saved and valid.

You can use natural language to provide field information and describe the XQuery that you want to generate. CLAIRE Copilot then generates the XQuery expression and displays it in the conversation window.

When you enter a prompt for an XQuery, CLAIRE Copilot processes the fields, such as input, output, temporary; and process objects, and generates the corresponding query. CLAIRE Copilot helps you work with complex data structures without writing manual XML inputs. CLAIRE Copilot validates every XQuery that it generates.

You can then copy the validated XQuery and use it in your process without writing complex code yourself.

Let's take a look at an example that demonstrates how CLAIRE Copilot generates an XQuery expression based on your prompt.

Note: The XQuery results might vary based on your inputs.

You submit the following prompt for an existing process:

```
Give me the XQuery expression to extract the first 19 characters for the current date
and time
```

CLAIRE Copilot replies with the following statement:

```
(
: Assumption: The current date-time is retrieved using the date:now() function, which
returns the current time in milliseconds.:
)
(
: Instruction: The date:millisToDate() function is used to convert milliseconds to a
date-time format. :) (: The substring() function is used to extract the first 19
characters of the date-time string. :
)
substring(xs:string(date:millisToDate(date:now())), 1, 19)
```

You can copy the generated XQuery and paste it in the required process.

Sample prompts for processes

Let's take a look at a few sample prompts that you can use to create a process.

The following sample prompts show the types of use cases and data flows that CLAIRE Copilot can configure in a process:

```
Get Salesforce accounts whose name contains United.

List Salesforce Opportunities filtered by the lead generation source, sorted by the
probability of successful closure and last modified date.

Get the top 10 Salesforce Opportunities by the expected close date filtered by a
particular opportunity type.

Create a process that syncs new or updated accounts from Salesforce to customer object
in NetSuite.

Create a process that synchronizes new or updated accounts from Salesforce to the
Customer object in NetSuite.

Create a process that synchronizes new or updated contacts from NetSuite to Salesforce.
```

Example: Find contacts in ServiceNow and generate leads in Marketo

You want to find contacts in ServiceNow and create leads in Marketo.

To do this, let's create a process in CLAIRE Copilot.

1. On the **Home** page, open CLAIRE Copilot.
2. In the prompt text box, type `Create a process to find contacts in ServiceNow and create leads in Marketo.`
   A list of objects available for ServiceNow appears.
3. Type the name of the object that you want to synchronize from ServiceNow. In this example, let's type `on_call_user_contact_preference`.
   CLAIRE Copilot lists the objects available for Marketo in your organization with the following statement:
   ```
   Please choose an object to sync from Marketo: Leads, Activity New Lead.
   ```
4. Type the name of the object that you want to synchronize from Marketo. In this example, let's type `Activity New Lead`.
   A list of frequently used ServiceNow connections appears.
5. Type the number of the ServiceNow connection that you want to use. In this example, let's type `1`.

   Note: If the connection isn't listed, you can type the name of a valid ServiceNow connection. Specify an existing connection that you've previously tested.

   A list of frequently used Marketo connections appears.
6. Type the number of the Marketo connection that you want to use. In this example, let's type `1`.

   Note: If the connection isn't listed, you can type the name of a valid Marketo connection. Specify an existing connection that you've previously tested.

   CLAIRE Copilot replies with the following statement:
   ```
   "Create a process to query on_call_user_contact_preference in ServiceNow and create
   Activity New Lead in Marketo (ServiceNow<=> Marketo)".
   The following connection(s) and object(s) are used:
   ```

```
* ServiceNow:
    * Connections:
        * SN
    * Objects:
        * on_call_user_contact_preference
* Marketo:
    * Connections:
        * marketo
    * Objects:
        * Activity New Lead
The process is ready. Would you like to create it?
```

7. To create the process, click `Yes`.
   The process is generated and opens in the Process Designer, as shown in the following image:

8. Verify the process definition. You can edit field values.
9. Save, publish, and then run the process.

Example: Extract and map Salesforce opportunity fields to ServiceNow ticket fields

You want to extract and map Salesforce opportunity fields to ServiceNow ticket fields.

To do this, let's create a process in CLAIRE Copilot.

1. On the **Home** page, open CLAIRE Copilot.
2. In the prompt text box, type `Extract and map Salesforce opportunity fields to ServiceNow ticket fields.`
   CLAIRE Copilot lists the frequently used Salesforce connections with the following statement:

```
Here's a list of your most frequently used Salesforce connections.
1. SF
   Salesforce
   /Default/
2. SFDC
   Salesforce
   /Default/
```

3. Type the number of the Salesforce connection that you want to use. In this example, let's type `2`.

Note: If the connection isn't listed, you can type the name of a valid Salesforce connection. Specify an existing connection that you've previously tested.

A list of frequently used ServiceNow connections appears.

4. Type the number of the ServiceNow connection that you want to use. In this example, let's type `1`.

   Note: If the connection isn't listed, you can type the name of a valid ServiceNow connection. Specify an existing connection that you've previously tested.

   A list of objects available for Salesforce appears.

5. Type the name of the object that you want to extract from Salesforce. In this example, let's type `Opportunity`.
   A list of objects available for ServiceNow appears.

6. Type the name of the object that you want to map in ServiceNow. In this example, let's type `ticket`.
   CLAIRE Copilot replies with the following statement:

```
"Extract and map Salesforce opportunity fields to ServiceNow ticket fields
(Salesforce<=> ServiceNow)".
The following connection(s) and object(s) are used:
* Salesforce:
    * Connections:
        * SFDC
    * Objects:
        * Opportunity
* ServiceNow:
    * Connections:
        * SN
    * Objects:
        * ticket
The process is ready. Would you like to create it?
```

7. To create the process, click `Yes`.
   The process is generated and opens in the Process Designer, as shown in the following image:

8. Verify the process definition. You can edit field values.
9. Save, publish, and then run the process.
