Preface

Read *Administration* to learn how to set up CLAIRE GPT for users in your organization.

CHAPTER 1

Administer CLAIRE GPT

As an organization administrator, to set up CLAIRE GPT for users in your organization, you need to review the licenses that are set up for your organization, configure runtime environments, manage users and roles in your organization, and enable CLAIRE generative AI services.

Review licenses

To access CLAIRE GPT, ensure that you have set up the Informatica® Intelligent Data Management Cloud™ license for your organization.

To view the licenses set up for your organization, see the **Licenses** page in Administrator.

Configure runtime environments

A runtime environment is the execution platform where you run CLAIRE GPT tasks. A runtime environment consists of one or more Secure Agent services.

The runtime environment that your organization uses depends on your licenses and the Informatica Intelligent Cloud Services that your organization uses.

You can configure runtime environments on the **Runtime Environments** page in Administrator. For more information about configuring runtime environments and installing a Secure Agent, see *Runtime Environments* in the Administrator help.

To perform tasks in CLAIRE GPT, enable the Intelligent Data Management Cloud services for the runtime environment that your organization uses.

Add users and assign roles

Add new users in Administrator and assign users to appropriate roles so that users in your organization can work with CLAIRE GPT.

Add users

Create a user on the **Users** page in Administrator. The **Users** page lists all the users in your organization. For information about creating users, see *User Administration* in the Administrator help.

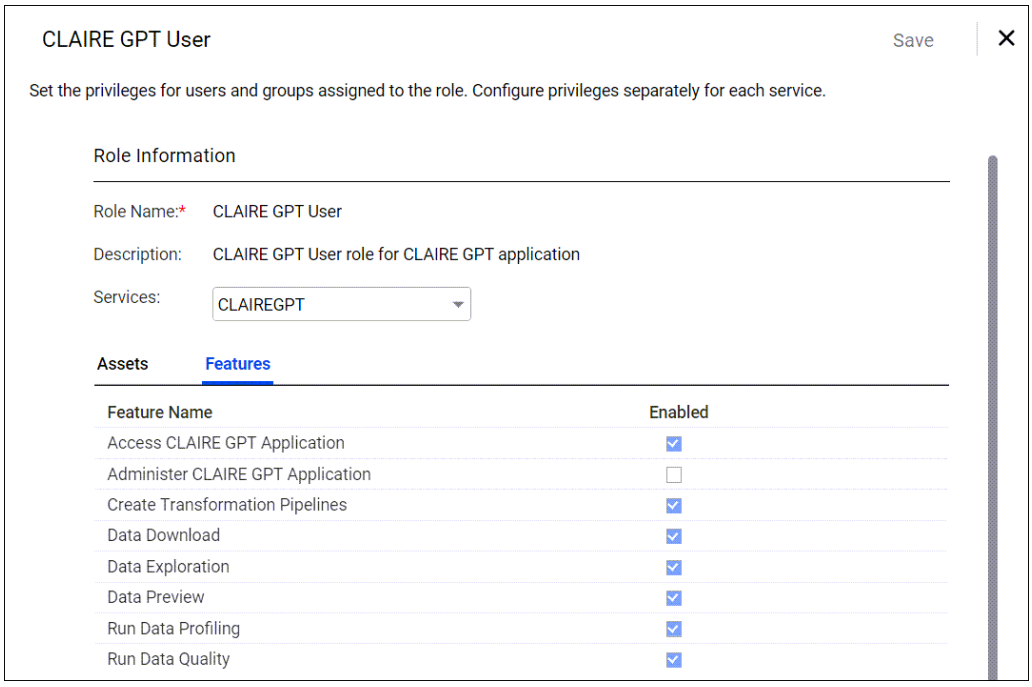

Assign roles

Assign predefined roles and custom roles to users and user groups based on your business needs. You can't change or modify the predefined roles. You can use the following predefined user roles for CLAIRE GPT users:

- **CLAIRE GPT User**
  This predefined role provides full access to all the capabilities of CLAIRE GPT. The following feature privileges are enabled by default for the **CLAIRE GPT User** role:

  - Access CLAIRE GPT Application
  - Create Transformation Pipelines
  - Data Download
  - Data Exploration
  - Data Preview
  - Run Data Profiling
  - Run Data Quality

  The following image shows the features enabled for the **CLAIRE GPT User** role:

Along with the above privileges, the **CLAIRE GPT User** role also provides the Read privilege for the Connection asset type for the Administrator service. This privilege allows CLAIRE GPT users access to various connections that are configured in Administrator in order to perform data exploration tasks.

The following image shows the Read privilege that is enabled by default for the Administrator service for the **CLAIRE GPT User** role:

- **Designer**
  To allow CLAIRE GPT users to perform data transformation tasks, assign this role along with the **CLAIRE GPT User** role. The **Designer** role allows a user to open, save, and run a mapping in Data Integration.

Enable CLAIRE generative AI services

As an organization administrator, you need to authorize users of your organization to utilize Informatica's CLAIRE services either by enabling CLAIRE generative AI services in Administrator or by providing consent to use CLAIRE services in CLAIRE GPT.

You can enable CLAIRE generative AI services for your organization in one of the following ways:

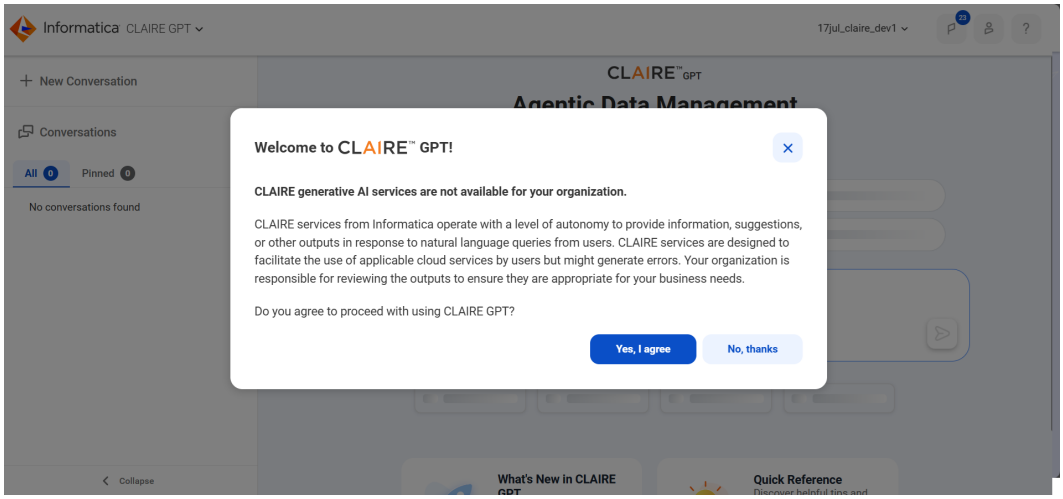

- In Administrator > **Settings**, select **Enable CLAIRE Generative AI Services**.
- Click **Yes, I agree** on the **Welcome to CLAIRE GPT!** dialog box in CLAIRE GPT.

  Note: After you give consent to use CLAIRE services, the **Enable CLAIRE Generative AI Services** check box in Administrator appears enabled.

After you enable CLAIRE generative AI services, tasks run in the background to make CLAIRE available for all users in your organization, and this could take several minutes to complete. You can continue to use other services during this time.

CLAIRE services from Informatica operate with a level of autonomy to provide information, suggestions, or other outputs in response to natural language queries from users. CLAIRE services are designed to facilitate the use of applicable cloud services by users but might generate errors. Your organization is responsible for reviewing the outputs to ensure they are appropriate for your business needs.

The following image shows the consent dialog box in CLAIRE GPT:

For more information about how to enable CLAIRE generative AI services in Administrator, see *Organization Administration* in Administrator.

Send 'Welcome' emails to new users

After you've added new users and assigned them access to CLAIRE GPT features through roles, you can send them emails to help them get up and running.

You can use the following sample email template to onboard new users. Customize the placeholder text and add any additional information before you send the email to new users.

Hi [user name],

We're glad to let you know that we have enabled your access to CLAIRE GPT. We encourage you to explore the features and capabilities of CLAIRE GPT. Please let us know if you have any questions or issues. We would really appreciate your feedback.

Here's some information to help you get started:
