Preface

Read *Introduction and Getting Started with CLAIRE GPT* for information on how to use CLAIRE GPT, Informatica's AI-powered agentic data management solution that helps you manage data through natural language.

CHAPTER 1

Welcome to CLAIRE GPT

CLAIRE GPT is Informatica's AI-powered agentic data management solution that helps simplify, accelerate, and optimize data management operations, driving enormous gains in productivity for data teams.

CLAIRE GPT is built on top of CLAIRE, Informatica's AI machine learning engine that powers data management solutions. With CLAIRE, you can perform a wide range of data management tasks while reducing complexity, enabling scale and speeding data delivery to data teams.

With CLAIRE GPT as the primary interface for data management, you can interact, process, analyze, and manage data through natural language prompts. CLAIRE GPT has a simple and easy-to-use interface and integrates with various Intelligent Data Management Cloud services to help you easily solve your data management business use cases. You can use CLAIRE GPT to improve your organisation's time-to-value and amplify business insights.

Today's data teams face escalating demands driven by AI adoption, governance complexity, and increasing regulatory oversight. To help meet these demands, CLAIRE GPT utilizes CLAIRE agents for efficient autonomous data management. CLAIRE agents can perform tasks autonomously, make decisions, and interact with large language models through specific skills to achieve a goal with human intervention in case of ambiguity. The agents have specific skills that can address challenges head-on by achieving end-to-end data management goals with intelligent autonomy. Each agent is designed to excel at specific aspects of data management, working together to deliver comprehensive solutions.

CLAIRE GPT dynamically adapts based on the current context, giving you a conversational, personalized, and fluid experience to achieve the goal at hand.

You can use the following CLAIRE agents for autonomous data management:

- Discovery agent
- Data quality agent
- Data integration agent
- Product help agent

You can discover data, explore metadata of assets from various sources such as databases, data integration sources, data lakes, and data warehouses. You can explore source data, assess data quality, and transform data of assets spread across various Intelligent Data Management Cloud services. You can then perform data-driven insights based on responses from CLAIRE GPT.

Note: Generative AI models are probabilistic models. There is no guarantee that the models will generate similar summaries for the same question.

Let's explore what CLAIRE GPT agents can do:

 Discovery agent	Quickly identifies relevant, trusted, and compliant data assets for analytics. This agent has the following skills: - Data discovery. Quickly and easily find assets across Intelligent Data Management Cloud services. - Metadata exploration. Search and explore the metadata of assets. - Data exploration. Understand the quality and shape of your source data.
 Data quality agent	Continuously monitors and remediates the data quality of assets in the catalog. This agent has the following skills: - Data quality assessment. Analyze assets based on data quality scores, status, or any specific data quality criteria. - Data quality diagnosis. Diagnose the data quality of assets to gain additional insights into your assets. - Data quality rule recommendation. Get recommendations for data quality rules for assets that don't have rules associated with them.
 Data integration agent	Utilizes the data transformation capability of Data Integration to load, transform, and integrate your data. This agent has the data transformation skill. This skill is used to generate ELT pipelines and run them as mappings in Data Integration to transform your data.
 Product help agent	Answers questions on Informatica's Intelligent Data Management Cloud services. This agent has the product documentation research skill. This skill leverages information available in the Informatica documentation portal, Knowledge Base articles, and How-To Library articles.

Want to learn more about CLAIRE GPT? Check out the getting started video.

Before you begin

Before you use CLAIRE GPT, ensure that your organization administrator sets it up for you.

Perform the following tasks:

- Review the licenses that are set up for your organization. To work with CLAIRE GPT, you must have the Informatica® Intelligent Data Management Cloud™ license.
- Configure runtime environments.
- Add new users in Administrator and assign users to appropriate roles.
- Enable CLAIRE generative AI services.

For more information about how to set up CLAIRE GPT for users in your organization, see *Administration*.

Logging in to CLAIRE GPT

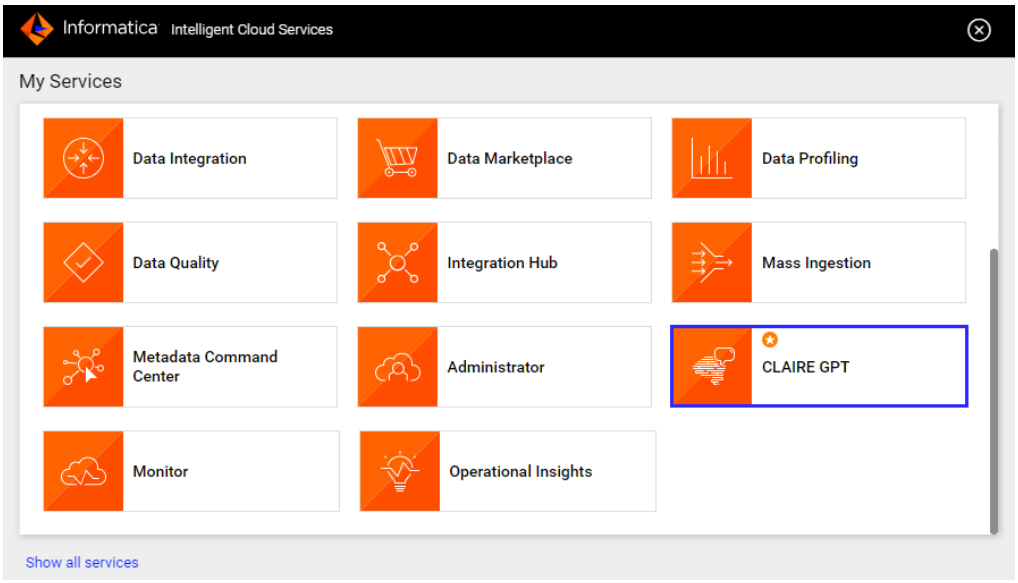

Log in to IDMC from a web browser to access CLAIRE GPT.

1. Log in to IDMC.

   The **My Services** page appears.

2. Click CLAIRE GPT.

   The following image shows the CLAIRE GPT box on the **My Services** page:

   The **Home** page of CLAIRE GPT appears with a few sample prompts to help you get started.

Home page

The **Home** page helps you start conversations to discover and manage data with CLAIRE GPT.

Use the prompt text box to type your questions or choose from sample prompts and categories. These sample prompts and categories help you ask effective questions specific to Intelligent Data Management Cloud services. You can view your previous conversations and pin important conversations. Additionally, you can view helpful tips to make tasks easier and stay updated with the latest features.

The following image shows the CLAIRE GPT **Home** page and its panels:

The **Home** page displays the following panels:

1. Sample prompts
2. Prompt text box
3. Categories
4. Navigation bar
5. What's new
6. Join the CLAIRE community
7. Quick reference
8. Notifications and user settings

Sample categories and prompts

Use the sample categories and prompts to get started with CLAIRE GPT. You can click a sample prompt or a sample prompt within a category, modify it in the prompt text box, and then press ENTER or click **Submit**.

Categories organize sample prompts to help you quickly find the right set of questions for your business needs. Categories include prompts related to specific Intelligent Data Management Cloud services and CLAIRE security and privacy.

Sample prompts provide easy examples that help you quickly start with CLAIRE GPT. These prompts save time and show you how to ask relevant questions.

The following categories contain prompts that you can use:

CLAIRE Security and Privacy

Includes sample prompts about data access control, compliance, security standards, data sharing, training data, and handling AI bias and hallucinations.

The following list provides some sample prompts in the CLAIRE Security and Privacy category:

- What are the data retention policies of Informatica and CLAIRE GPT?
- How does CLAIRE GPT handle hallucinations and bias?
- Provide details about Informatica IDMC certifications and compliance.

- How does CLAIRE GPT mitigate risks associated with AI usage?

Data Governance

Includes sample prompts about project overviews, identifying glossary terms lacking definitions, finding outdated or undocumented tables, tracking reports of data sources, and listing recent data quality rules.

The following list provides some sample prompts in the Data Governance category:

- Show me the data sets that have sensitive data elements from the <system name> system.
- Display a pie chart for the top five data sets in terms of the concentration of sensitive data elements.
- How many data sets have missing business descriptions? Show me the count, percentage, and breakdown by system?
- Show me the assets that are subject to GDPR regulations.

Data Quality

Includes sample prompts to identify data sets with poor quality scores, create data quality rules, analyze missing values, and track stale quality scores across tables and schemas.

The following list provides some sample prompts in the Data Quality category:

- Which categorical columns in the <table name> table have more than 10% missing values?
- Provide data quality insights for the data set <data set name>.
- What could have led to the poor DQ for the <data set name> data set?
- List the data sets that have poor data quality scores from the <system name> system.

Data Analysis

Includes sample prompts for analyzing data completeness, previewing recent records, identifying duplicates in tables, and use cases with prompts for data analysts.

The following list provides some sample prompts in the Data Analysis category:

- Analyze the critical columns of the <table name> table to determine their data sparsity or completeness.
- Show random sample data from the <table name> table.
- Show a data preview of the last 10 records from the <table name> table.
- What is the date range for the important date columns in the <table name> table?

Master Data Management

Includes sample prompts about viewing business entity records by source or status, managing Directed AI match rules, creating Customer 360 records, and tracking data quality rules and source systems.

The following list provides some sample prompts in the Master Data Management category:

- How do I create a record in Customer 360?
- Show all <BE_name> business entity records with headquarters located in <state>.
- Show all Directed AI match rules configured for the <BE_name> business entity.
- Show all <BE_name> business entity records with headquarters located in <city>.

The following list provides some sample prompts that you can use with CLAIRE GPT

- Give an overview of the contents in the <project name> project.
- List the assets with high business criticality but low data quality scores.

- What mechanisms does Informatica use to ensure transparency around data access when CLAIRE GPT performs real-time data exploration from customer data sources?
- Show all <BE_name> business entity records that don't belong to any category.

Note: The sample prompts vary based on the data available in the catalog and MDM SaaS.

Prompt text box

Enter your prompts in the prompt text box to interact with, process, analyze, and manage data. To access a list of sample prompts, type # in the prompt text box.

Use CLAIRE GPT's intelligent prompt completion to quickly refer to assets, artifacts, users, and user groups from the suggestions that appear based on your conversation history. Intelligent prompt completion gives you suggestions based on the intent of your previous prompts and the last seen or explored assets in the conversation.

To use the intelligent prompt completion functionality, you need to first search and discover assets, artifacts, users, or user groups in the conversation and then type @ in the prompt text box. A list of suggestions based on your conversation history appears. If you continue to type the asset name, the list shortens, and you can select a suggestion from the list.

You can filter the suggestions based on the following categories:

All

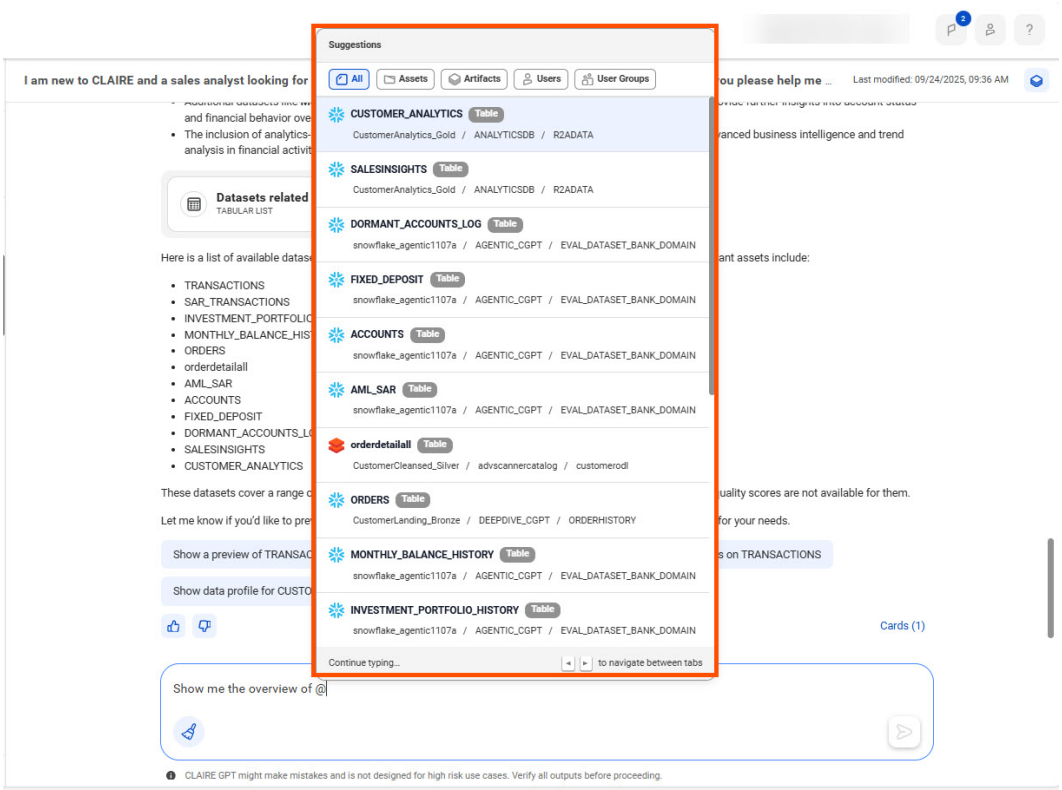

Assets

Artifacts

Users

User groups

The following image shows the suggestions that appear based on the conversation history:

If you wish to reuse a previous prompt, you can use the up and down arrow keys and recall prompts within the conversation. To try the same prompt again, you can modify it further or type retry or refresh.

If you don't want CLAIRE GPT to generate a response, you can cancel the response generation. To cancel the response generation, click the **Stop generating response** icon before CLAIRE GPT displays the response.

Navigation bar

Navigate to the various components of CLAIRE GPT to start conversations and view previous conversations.

Click a previous conversation to view the conversation history. You can also rename, delete, and pin a conversation.

For more information about conversations, see Chapter 2, " Conversations" on page 12.

Notifications and user settings

View important notifications and view or modify user settings.

You can view notifications in CLAIRE GPT and receive email notifications. You can view alerts for unread notifications on the toolbar. Click **Notifications** to view the latest unread notifications in the notification tray. Click a notification to mark it as read. To view all unread notifications on the **Notifications** page, click **View all Unread**.

You can also view the user profile, user settings, and log out of CLAIRE GPT.

CHAPTER 2

Conversations

CLAIRE GPT has a simple natural language conversation interface. You can send prompts to start a conversation to easily discover and manage data across Intelligent Data Management Cloud services.

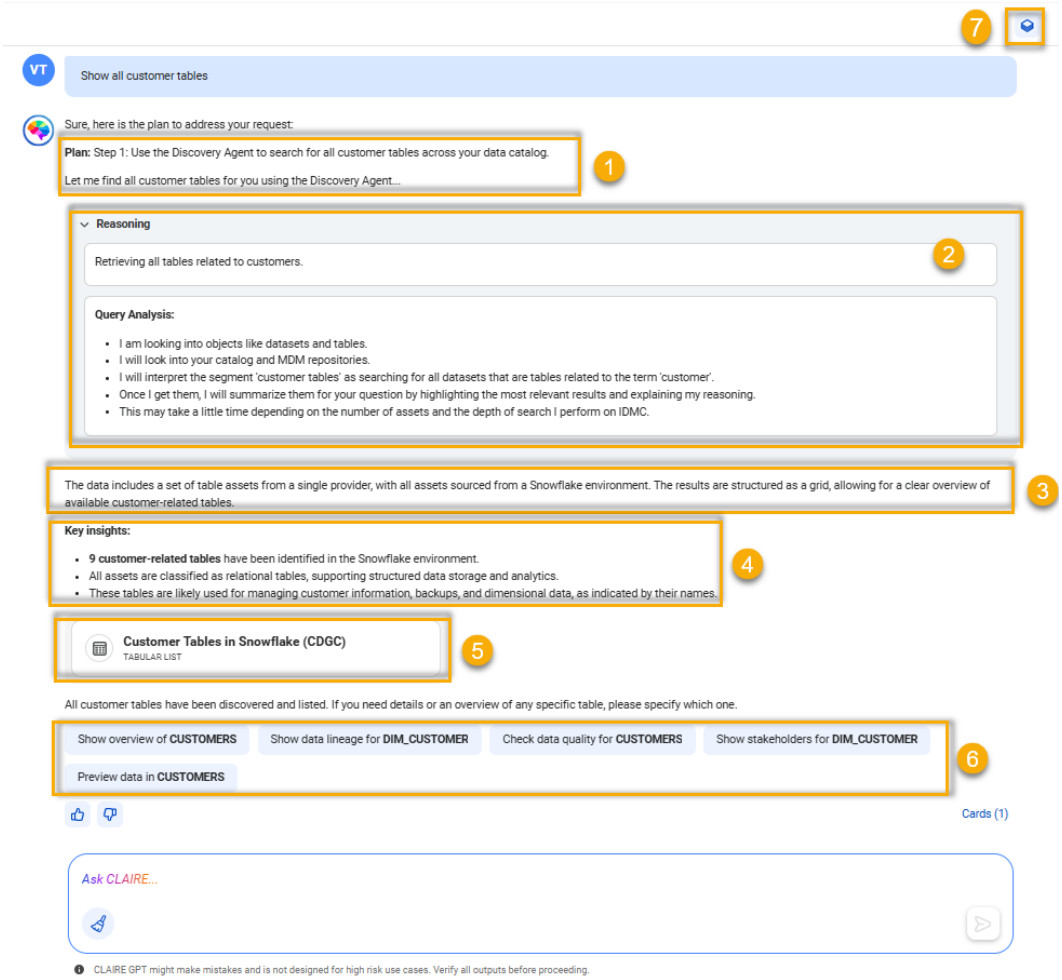

To start a conversation, type a prompt in the prompt text box, modify a sample prompt, or select and modify a sample prompt from categories such as Data Governance, Data Analysis, Data Quality, and Master Data Management. After you enter a prompt, press ENTER or click **Submit**. You can also type # in the prompt text box to view the sample prompts.

You can rename, delete, pin, and search conversations. Additionally, you can rate responses within a conversation and provide feedback. To clear the conversation context, use a natural language prompt such as `Clear conversation memory` or click the **Clear conversation memory** icon, and then continue with your next request.

Data discovery responses include explanations for each item in the response. The explanation provides information such as why particular items appear in the response, as well as unique insights for different asset types. Responses depend on the privileges that the organization administrator assigns to you.

Note: CLAIRE GPT displays saved conversations prior to the October 2025 release in read-only mode.

The following image shows a conversation page with a response from CLAIRE GPT:

CLAIRE GPT displays the following sections in a response:

1. Reasoning. Explains the approach and methodology for analyzing relevant data sets based on the prompt query.
2. Cards. Includes visual components such as tables and charts arranged in various layout formats to display data and metadata based on your prompt. These provide a better user experience and allow quicker exploration of complex prompts that generate multiple assets.
3. Summary. Summarizes the response briefly.
4. Analysis and insights. Provides key findings, including the number and types of data sets identified as relevant to the query. This section might not appear in some responses, depending on the types of prompts.
5. Business-friendly insight. Provides insights to make technical information more accessible, relevant, and actionable for business users. This section might not appear in some responses, depending on the types of prompts.
6. Suggestions. Provides new prompt suggestions you can send based on your conversation history.
7. Uploaded files. Includes all files you upload in a conversation.

8. Artifacts. Artifacts are outputs that CLAIRE GPT generates, such as Intelligent Data Management Cloud mapplets and rule specifications. CLAIRE agents can instantly consume and reuse artifacts. This enables you to ask questions about the artifacts immediately. This also streamlines how you can access, manage, and reuse artefacts, promoting greater efficiency and collaboration.

Note: To enhance system reliability and optimize performance, conversations older than six months are archived. Archived conversations don't appear in CLAIRE GPT.

Start a conversation

Start a conversation with CLAIRE GPT and send prompts to easily discover and manage data across Intelligent Data Management Cloud services.

1. On the **Home** page, you can start a conversation in any of the following ways:
   - Type a prompt in the prompt text box.
   - Click and modify a sample prompt.
   - Select and modify a sample prompt from the following categories:
     - CLAIRE Security and Privacy
     - Data Governance
     - Data Analysis
     - Data Quality
     - Master Data Management

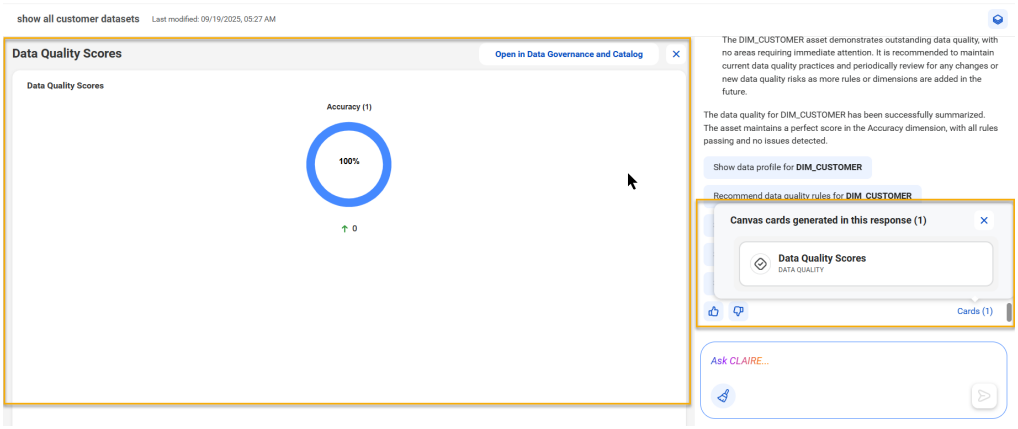

2. After you enter your prompt in the prompt text box, press ENTER or click **Submit**.

   A new conversation page appears with the response.
   To view generated canvas cards, click **Cards** in the response . When you open a canvas card, you can view data or metadata details based on your prompt.

   On the canvas, you can interact with the responses and switch between charts and raw data in tabular format to meet your business requirements. You can compare and engage with data. For example, responses appear in a comparative tabular format, and you can copy an entire table or specific sections of the table. You can download the responses for further analysis.

   To view more information about assets in the corresponding Intelligent Data Management Cloud service, you can click the asset name or the service name.

   The following image shows a sample canvas card and its details on the canvas:

Working with conversations

You can like or dislike responses to provide feedback, rename conversations, delete unwanted conversations, and pin important conversations for easy access.

Like or dislike responses in conversations

You can add a comment only after you rate a response. You can add one comment per response, and you can't modify your rating or comment later.

1. Go to the response of a conversation that you want to rate.
2. Click **Like** or **Dislike**.
3. To provide feedback, click **Add comments**.

Rename conversations

Conversations are saved with the first prompt as the title. You can rename conversations to make them easier to identify, find, and organize.

1. From the navigation bar on the CLAIRE GPT **Home** page, hover over the conversation that you want to rename.
2. Click **Edit**.
3. Update the conversation name.
4. Confirm the updated conversation name.

Delete conversations

CLAIRE GPT stores all conversations you start. If you don't want to keep a conversation, you can delete it. When you delete conversations, you delete the entire conversation history.

1. From the navigation bar on the CLAIRE GPT **Home** page, hover over the conversation that you want to delete.
2. Click **Delete**.
3. Confirm deletion of the conversation.

Pin conversations

You can pin conversations to keep them at the top of your list for quick and easy access. When you pin a conversation, the conversation appears on the **Pinned** tab.

1. From the navigation bar on the CLAIRE GPT **Home** page, hover over the conversation that you want to pin.
2. Click **Pin**.
3. To unpin a conversation, hover over the conversation and click **Unpin**.

Clear conversation memory

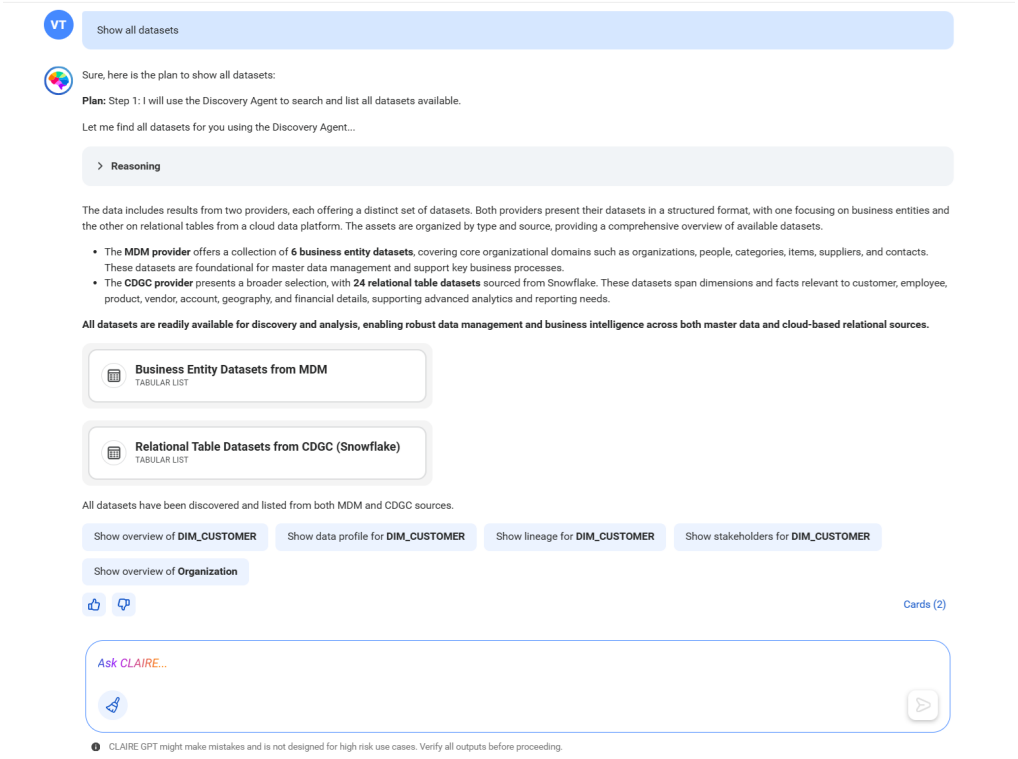

CLAIRE GPT retains memory based on your conversation history. If you don't want to keep the conversation memory, you can clear it.

After sending a few prompts and establishing context, you may want to clear the conversation's context. You can ask CLAIRE GPT to clear the conversation memory with natural language and then follow up with the next request, or you can click the **Clear conversation memory** icon in the prompt text box. This action clears the context established in the conversation but retains the conversation history. After you clear the conversation

memory, CLAIRE GPT's subsequent responses won't infer from the preceding prompts and responses in the conversation.

1. Go to the conversation you want to clear the memory of.

   The following image shows a conversation page with a response from CLAIRE GPT that displays all available data sets:

2. Type a natural language prompt to clear the conversation memory along with the next request, or simply click the **Clear conversation memory** icon in the prompt text box.

   The following image shows the same conversation page with a response from CLAIRE GPT after clearing the memory set on data sets and displaying an overview of the DIM_CUSTOMER table:
