Abstract

Read the *Release Notes* to learn about fixes and known issues for CLAIRE GPT. For more information about new features and enhancements, see *What's New*.

Fixed issues

The tables in this section describe recent fixed issues for CLAIRE GPT.

February 2026 fixed issues

Issue	Description
CGPT-29872	You can't preview sample data from Microsoft SQL Server source systems. This issue occurs if the runtime environment includes an SQL Server connection with Windows Authentication V2 and a Microsoft Azure Synapse SQL connection.

November 2025 fixed issues

Issue	Description
CGPT-26151	The 'Created By' field on the canvas displays the user ID instead of the user name.
CGPT-25645	When you enter a prompt to count records based on specified values from MDM SaaS, CLAIRE GPT doesn't return any results.

Issue	Description
CGPT-25022	When you enter a prompt to explore records in MDM SaaS, the response includes records that fully match the search query and additional records that partially match the search terms. For example, if you enter Show Person records with "Project Manager" as designation, CLAIRE GPT treats project and manager as different search terms. It returns records that contain both the terms in the designation field from MDM SaaS.
CGPT-24494	When you enter a prompt to return records with distinct field values from MDM SaaS, CLAIRE GPT incorrectly returns records with all field values.

July 2025 fixed issues

Issue	Description
CGPT-10155	If you create an ELT pipeline, log out of CLAIRE GPT, and then log back in from the same browser tab, an internal error occurs when you open mappings in Data Integration. **Workaround**: Log out, close your browser tab, and then log in again using a new browser tab.

April 2025 fixed issues

Issue	Description
CGPT-15543	CLAIRE GPT might not provide an accurate response to an Informatica help prompt that contains multiple questions covering different aspects of a topic.
CGPT-15225	The data discovery prompts that query assets based on their creation, updation, or modification dates may return inaccurate results or an error.
CGPT-14236	The data discovery prompts that query the lineage between two seed assets fail with an error.

November 2024 fixed issues

Issue	Description
CGPT-7630	The Data Integration mapping is not generated for data transformation prompts that are subqueries correlated with the previous prompts.

October 2024 fixed issues

Issue	Description
CGPT-9877	The data exploration prompts for full joining of columns return an error. This issue might happen when a joinable column is defined as a NOT NULL constraint in the database and one of the column values in the resulting set is NULL.
CGPT-9469	When you agree to use CLAIRE services, and click the **Yes, I agree** button on the **Welcome to CLAIRE GPT!** consent dialog box, the dialog box reloads indefinitely and you can't access CLAIRE GPT. To resolve this issue, contact Informatica Global Customer Support.

July 2024 fixed issues

Issue	Description
CGPT-7646	The data exploration prompts return null values for timestamp or current date data types.

May 2024 fixed issues

Issue	Description
CGPT-7483	When mappings are generated for the Amazon Redshift source system, the **Open in Data Integration** button does not open the mappings in Data Integration.
CGPT-7613	Data exploration prompts fail if the shared runtime environment that you are using belongs to another sub-organization.
CGPT-7617	For data transformation prompts, the mapping is not generated if you use the alias name for data elements.

April 2024 fixed issues

Issue	Description
CGPT-7703	The data transformation prompts querying the Synapse source systems are failing with `SQL_PARSING_ERROR`.

Known issues

The tables in this section describe known issues for CLAIRE GPT.

February 2025 known issues

Issue	Description
CGPT-15567	When you install a Secure Agent and enable the Data Governance and Catalog service, data exploration prompts fail for the following connections: - Oracle - Microsoft Azure SQL Server - Microsoft SQL Server This happens because the JDBC JAR files are not placed in the required location: `<Informatica Secure Agent installation directory>\ext\connectors\thirdparty\informatica.jdbc_v2\common` **Workaround**: Ensure that the Data Integration Service is up and running and then restart the IDMC Data Gateway Service in the Secure Agent. This places the files in the required location.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:
https://www.informatica.com/services-and-training/customer-success-services/contact-us.html.

To find online support resources on the Informatica Network, visit https://network.informatica.com and select the Support option.
