Preface

Read *What's New* to learn about important notices, new features, enhancements, and behavior changes in CLAIRE GPT for the current release.

For information about fixes and known issues, see the *Release Notes*.

CHAPTER 1

October 2026

The following topics provide information about new features and enhancements in the October 2026 release of CLAIRE GPT.

Changelog October 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
October 15, 2026	Deleted	Important notices and upcoming changes
September 10, 2026	Initial publication	

New features and enhancements

The October 2026 release of CLAIRE GPT includes the following new features and enhancements.

Discover and explore Salesforce Data 360 assets

You can now discover and explore Salesforce Data 360 assets in CLAIRE GPT alongside your other data assets. The supported asset types include Data Model Objects, Data Lake Objects, Calculated Insights, Identity Resolution, and Data Streams.

Use the discovery agent and the data quality agent to perform the following tasks:

- Find Salesforce Data 360 assets alongside your other data assets.
- Explore the metadata and lineage of an asset, including its data elements, data profile, related assets, and the upstream and downstream assets in the data flow.
- Ask questions about the data in Salesforce Data 360 assets.
- Assess the data quality of Salesforce Data 360 assets.

For more information about the discovery agent and the data quality agent, see *Discovery Agent* and *Data Quality Agent* in Data Management Agents.

Open search results in Data Governance and Catalog

You can now open search results in Data Governance and Catalog from your CLAIRE GPT conversation to transition seamlessly from your conversation to the full catalog view. CLAIRE GPT conversations display 25 ranked assets from your search results. For broader discovery prompts, such as listing all columns in a large table, the list of matching assets often exceeds what a conversation can show. To view the complete list of assets in your search results without losing context, click **Open in Data Governance and Catalog**.

CLAIRE GPT doesn't generate search queries for lineage or aggregation-related prompts.

For more information about the opening large search results in Data Governance and Catalog , see *Discovery Agent* in Data Management Agents.

Prompt CLAIRE GPT in Japanese

You can interact with CLAIRE GPT in Japanese when you work with the data quality, discovery, and product help agents.

The product help agent generates its Japanese responses through real-time machine translation of the English source content, so it can cover any product help topic. Each response links to its English source so you can verify the details.

CHAPTER 2

July 2026

The following topics provide information about important notices, new features and enhancements in the July 2026 release of CLAIRE GPT.

Changelog July 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
June 18, 2026	Initial publication	

Important notices

The July 2026 release of CLAIRE GPT includes the following important notices.

Data quality agent availability

Effective in July 2026, the data quality agent is available on the following PODs:

- NA West 1 AWS (USW1)
- US West 1 Azure (USW1-1)
- US West 1 GCP
- EM West 1 AWS (EMW1)
- UK AWS (UK1)
- EM Central 1 Azure (EMC1)
- EM Central 2 Azure (EMC2)
- AP SouthEast 1 AWS (APSE1)

To find the dates on which Informatica makes the latest version of CLAIRE GPT available on each POD, visit the Informatica Community page.

For more information about POD availability, see Pod Availability and Networking.

New features and enhancements

The July 2026 release of CLAIRE GPT includes the following new features and enhancements.

Profile a subset of your data

When you ask CLAIRE GPT to run a data profile, you can filter by rows, focus on selected columns, or combine both to target specific records. You get faster, more focused results without profiling an entire data set.

For more information about the data quality agent, see *Data Quality Agent* in Data Management Agents.

CHAPTER 3

April 2026

The following topics provide information about important notices, new features, enhancements, and changes in the April 2026 release of CLAIRE GPT.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
May 25, 2026	Updated	Preview initiatedon page 10
May 18, 2026	Added	Preview initiatedon page 10
April 08, 2026	Deleted	“Important notices” on page 10
April 08, 2026	Updated	“Data quality agent enhancements” on page 10
April 08, 2026	Updated	“Data quality agent changes” on page 11
April 08, 2026	Updated	“Data quality agent enhancements” on page 10
April 08, 2026	Updated	“Data quality agent enhancements” on page 10
March 26, 2026	Added	“Preview lifted” on page 10
March 26, 2026	Added	“Enhanced product help agent with discovery context awareness” on page 11
March 11, 2026	Initial publication	

Important notices

The April 2026 release of CLAIRE GPT includes the following important notices.

Preview lifted

Effective in the April 2026 release, the data cleansing and data quality rule generation skills of the data quality agent in CLAIRE GPT are production ready. Previously, this functionality was only available in preview.

For more information about the data cleansing and data quality rule generation skills of the data quality agent, see *Data Quality Agent* in Data Management Agents.

Preview initiated

Effective in the April 2026 release, the ability to use the product experience agent to extract data from PDFs and enrich records in Product 360 SaaS is available for preview.

You can start a conversation in CLAIRE GPT, navigate to CLAIRE Copilot in MDM - Product 360 SaaS, and enrich records using the product experience agent.

The agent can also enrich and classify records by running data quality objectives. After enrichment, you can view a data completion report that shows the number of enriched fields and the number of objectives applied.

Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

For more information about the product experience agent, see *Product experience agent* in the MDM - Product 360 SaaS help.

New features and enhancements

The April 2026 release of CLAIRE GPT includes the following new features and enhancements.

Consume and reuse artifacts generated by CLAIRE

Agents can now instantly consume and reuse artifacts generated by CLAIRE GPT. This enables you to ask questions about the artifacts instantaneously. Artifacts can include Intelligent Data Management Cloud assets such as mapplets and rule specifications. Using this enhancement, you can access, manage, and reuse artefacts, and promote greater efficiency and collaboration.

For more information, see *Conversations* in *Getting Started with CLAIRE GPT*.

Data quality agent enhancements

This release includes the following data quality agent specific enhancements:

Generate data quality rule for a data set

CLAIRE GPT introduces the capability for the data quality agent to generate data quality rule specifications from a file that contains sample data, or a data set from a specified catalog source. CLAIRE GPT analyzes the critical data elements of a data set to generate rule specifications.

Simplified process steps

When you ask CLAIRE GPT to generate a data quality rule specification or cleanse data, the process steps are presented concisely. The steps now help you distinguish the required steps from optional ones and from steps where you can choose to provide additional inputs. Additionally, if you choose to skip an optional step, the response explicitly explains the impact of skipping that step.

Improved explanation for rule generation

When you ask CLAIRE GPT to generate a data quality rule specification, the **Reasoning** section in the response now clearly explains the rationale behind how the data quality rule was generated. This includes adding comments to the rule scripts that CLAIRE GPT generates as a part of the rule generation plan.

Improved data quality rule recommendations

CLAIRE GPT now considers business context from the user prompt to identify relevant data elements and recommend data quality rules that are contextual to the identified data elements. Additionally, if no rule specifications are available in Data Quality for CLAIRE GPT to recommend for the data set, CLAIRE GPT can generate new rules for the data set.

Improved data quality assessment

When you use CLAIRE GPT to profile data, you can now prompt to analyze a subset of a data set. For example, you can ask CLAIRE GPT to focus on a sample row within the data set, analyze consistent and repeatable subsets of a data set, or to examine a representative subset.

Additionally, you can now ask CLAIRE GPT to profile up to 10,000 rows and 50 columns of data.

For more information about the data quality agent, see *Data Quality Agent* in Data Management Agents.

Enhanced product help agent with discovery context awareness

The product help agent now retains the context from the discovery agent to provide relevant help responses. When you ask help questions related to a discovered asset, the product help agent considers the previous context of the asset while answering the question.

For example, if you ask questions to discover specific assets and then ask a help question related to the discovered asset, the product help agent retrieves asset details and identifies the asset type. It then customizes its response based on the identified asset type and returns the most relevant response.

This enhancement improves user experience by delivering context-aware, asset-specific help, reducing the need for repetitive questions in a conversation.

Changed behavior

The April 2026 release of CLAIRE GPT includes the following changed behavior.

Data quality agent changes

Create dictionary automatically when generating rules

If CLAIRE GPT can't find the specified dictionary in Data Quality when asked to generate a data quality rule specification, it now automatically creates the dictionary for the rule.

Previously, if the dictionary that you specify didn't exist in Data Quality, CLAIRE GPT wouldn't create the rule.

Skip data quality rule testing

When you ask CLAIRE GPT to not test the data quality rules that it generates, it can still publish the rule.

Previously, if you choose not to test a data quality rule or if a rule failed a test, the rule wasn't published.

CLAIRE GPT highlight responses

When you ask CLAIRE GPT to generate a data quality rule specification, the response includes a table that contains information generated by CLAIRE GPT along with information extracted from your prompt. The parts generated by CLAIRE GPT are highlighted in yellow.

File size limit update

You can upload a CSV or Microsoft Excel file up to 25 MB in size when asking CLAIRE GPT to generate rule specifications or to assess or cleanse data.

Previously, you could upload a file with a maximum size of 5 MB.

For more information about the data quality agent, see *Data Quality Agent* in Data Management Agents.

CHAPTER 4

November 2025

The following topics provide information about important notices, new features, and enhancements in the November 2025 release of CLAIRE GPT.

Changelog November 2025

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
February 11, 2026	Added	"Explore relationships and hierarchies in MDM SaaS" on page 14
January 6, 2026	Added	"POD availability" on page 13
November 18, 2025	Deleted	"POD availability" on page 13
November 13, 2025	Updated	"Preview initiated " on page 14
November 13, 2025	Updated	"Data quality agent enhancements" on page 15
November 4, 2025	Initial publication	

Important notices

The November 2025 release of CLAIRE GPT includes the following important notice.

POD availability

As of December 2025, CLAIRE GPT is available on the US West 1 GCP POD.

To find the dates on which Informatica makes the latest version of CLAIRE GPT available on each POD, visit the Informatica Community page.

For more information about POD availability, see Pod Availability and Networking.

Preview initiated

Effective in the November 2025 release, the data cleansing and data quality rule generation skills of the data quality agent in CLAIRE GPT are available for preview on the PODs in the US and EMEA regions.

Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

For more information, see "New features and enhancements" on page 14.

New features and enhancements

The November 2025 release of CLAIRE GPT includes the following new features and enhancements.

Explore relationships and hierarchies in MDM SaaS

As of February 2026, we've rolled out support for exploring relationships and hierarchies in MDM SaaS as part of the November 2025 release.

You can now explore relationship and hierarchy metadata in MDM SaaS. Additionally, you can also explore relationship and hierarchy data in Customer 360 SaaS, Product 360 SaaS, and Supplier 360 SaaS. You can view only direct relationships.

You can use the following sample prompts to explore relationship and hierarchy data:

- Show relationship attributes defined for Person.
- Is <name of the person> married?
- Show relationship between <name of the person> and <name of the person> from the Person business entity.
- Does <name of the person> work with <company name>?

For more information about exploring records from MDM SaaS, see *Discovery Agent* in Data Management Agents.

MDM SaaS enhancements

This release includes the following enhancements to MDM SaaS:

- You can now explore field groups and nested field groups with multiple entries. CLAIRE GPT displays the entry that matches the prompt and a link to view additional field group entries. When you click the link, the additional entries appear in a table. For example, when you ask CLAIRE GPT to display the billing address of a person, it displays the billing address of the person along with additional addresses.
- You can now filter data from Customer 360 SaaS, Product 360 SaaS, and Supplier 360 SaaS based on dates or date ranges. For example, you can find records created between October 2025 and November 2025.
  You can enter the following sample prompts to drill down data based on a date or date range:
  - How long has Sara Jones been associated with Informatica?
  - Show customers born in 2020.

- You can start a conversation in CLAIRE GPT, seamlessly switch to an MDM SaaS business application, and continue it in CLAIRE Copilot. In CLAIRE Copilot, you can use the same MDM SaaS prompts that you use in CLAIRE GPT.

For more information about exploring records from MDM SaaS, see *Discovery Agent* in Data Management Agents.

Data quality agent enhancements

This release includes the following enhancements to data quality agent:

- If you upload a CSV or Microsoft Excel file to specify a data set from the catalog, the data quality agent uses the data quality cleansing skill to suggest cleansing rules for your data. It provides a preview of your data, displays profiling insights, and presents a detailed plan to cleanse your data. Once you approve the plan, the agent generates cleansed data, and creates mapplets based on the generated cleansed data. Mapplets enable a streamlined and repeatable data cleansing process for similar data sets in the future.
- If you upload a CSV or Microsoft Excel file containing data quality rule descriptions in natural language, the data quality agent uses the data quality rule generation skill to automatically extract business rules and convert them into data quality rule specifications in Data Quality. The agent can also extract rules from the rule descriptions you provide in your prompt. Once you allow the agent to publish the rules, the rule specifications are generated and you can see them in Data Quality. You can preview the rules that the agent could and couldn't generate in the agent log.

CHAPTER 5

October 2025

The following topics provide information about important notices, new features, enhancements, and changes in the October 2025 release of CLAIRE GPT.

Important notices

The October 2025 release of CLAIRE GPT includes the following important notices.

POD availability

CLAIRE GPT is now available on the EM Central 1 Azure - Germany POD.

To find the dates on which Informatica makes the latest version of CLAIRE GPT available on each POD, visit the Informatica Community page.

For more information about POD availability, see Pod Availability and Networking.

New features and enhancements

The October 2025 release of CLAIRE GPT includes the following new features and enhancements.

Agentic data management with CLAIRE GPT

Today's data teams face escalating demands driven by AI adoption, governance complexity, and increasing regulatory oversight. To help meet these demands, CLAIRE GPT now utilizes CLAIRE agents for efficient autonomous data management.

CLAIRE agents harness advanced AI reasoning and planning models to automate complex data operations that range from data ingestion and lineage tracking to data quality assurance. CLAIRE agents redefine how you interact with Intelligent Data Management Cloud services. Instead of an interface built around specific tasks, the new experience dynamically adapts based on the current context, giving you a more conversational, personalized, and fluid experience to achieve the goal at hand. Each agent is designed to excel at specific aspects of data management, working together to deliver comprehensive solutions.

You can use the following CLAIRE agents for autonomous data management with complex prompts:

- Discovery agent
- Data quality agent
- Data integration agent

- Product help agent

Discovery agent

The discovery agent helps you quickly identify relevant, trusted, and compliant data assets for analytics. The agent performs tasks autonomously, make decisions and interact with the large language model through specific skills to achieve a specific goal with human intervention in case of any ambiguity. This agent can perform data discovery, metadata discovery, data exploration, and metadata exploration.

The discovery agent has the following skills:

- Data discovery. Helps you quickly and easily find assets across Intelligent Data Management Cloud services.
- Metadata exploration. Helps you search and explore the metadata of assets.
- Data exploration. Helps to understand the quality and shape of your source data.

For more information about the discovery agent, see *Discovery Agent* in Data Management Agents.

Data quality agent

The data quality agent continuously monitors and remediates the data quality of assets in the catalog. The agent can assess and diagnose the data quality of assets, summarize data, identify outliers, perform data profiling on demand, and recommend and accept data quality rules.

The data quality agent has the following skills:

- Data quality assessment. Helps you discover and analyze assets based on data quality scores, status, or any specific data quality criteria. You can identify outliers in your data by asking for a detailed summary that includes a comprehensive data profile such as data type, statistics, and null and distinct values.
- Data quality diagnosis. Helps you diagnose the data quality of assets to gain additional insights into your assets. You can identify and remediate the root cause of data quality issues.
- Data quality rule recommendation. Helps you get recommendations for data quality rules for assets that don't have rules associated with them. You can accept recommended rules to instantly create data quality rule occurrences for the data elements in your catalog.

For more information about the data quality agent, see *Data Quality Agent* in Data Management Agents.

Data integration agent

The data integration agent simplifies data transformation by generating ELT pipelines.

The data integration agent has the data transformation skill. This skill is used to generate mappings.

For more information about the data integration agent, see *Data Integration Agent* in Data Management Agents.

Product help agent

The product help agent generates enriched responses when you ask for help with Intelligent Data Management Cloud services.

The product help agent has the product documentation research skill. This skill is used to leverage information available in the Informatica documentation portal, Knowledge Base articles, and How-To Library articles.

For more information about the product help agent, see *Product Help Agent* in Data Management Agents.

Changed behavior

The October 2025 release of CLAIRE GPT includes the following changed behavior.

Human intervention for clarifications

When CLAIRE GPT requires further information or detects ambiguities in a conversation, human intervention is possible to clarify such ambiguities. These human interventions make responses more conversational.

Previously, CLAIRE GPT responses didn't allow human intervention.

Proprietary third-party LLMs for inferences

CLAIRE generative AI services utilize proprietary LLMs from multiple third-party providers to perform specific functions. CLAIRE retrieves relevant metadata based on user requests and uses private and localized deployments of multiple LLMs for inferences.

Previously, LLMs in the CLAIRE global intelligence stack were used for inferences.

For more information, see
Informatica Intelligent Data Management Cloud CLAIRE Security, Privacy, and Compliance Overview.

Perform tasks without discovering assets

CLAIRE GPT can now perform tasks without requiring you to discover assets first.

Previously, you had to perform data discovery before performing other tasks.
