Chapter 2: Product documentation research 6

Sample conversation 6

Preface

Read *Product Help Agent* to learn how to use natural language prompts to quickly discover information about Intelligent Data Management Cloud services from Informatica's official help materials.

CHAPTER 1

Product help agent

Quickly find relevant information about Intelligent Data Management Cloud services.

The product help agent can analyze Informatica's official help materials and assist users with queries pertaining to the functionality of Informatica services.

You can access these capabilities through CLAIRE GPT or CLAIRE Copilot, where the product help agent interprets your query, searches across official help materials, and completes your request.

Product help agent skills

The product help agent has specific skills that can assist users with queries about Intelligent Data Management Cloud services.

The agent uses the product documentation research skill to help you with your queries about Intelligent Data Management Cloud services. For more information, see Chapter 2, “Product documentation research” on page 6.

CHAPTER 2

Product documentation research

Quickly get started and learn about Intelligent Data Management Cloud services.

You can start conversations to quickly search and discover information that helps you get started with an Informatica service, learn key concepts about a service, or understand how to perform specific tasks in a service.

The product help agent retains the context from the discovery agent to provide relevant help responses. When you ask help questions related to a discovered asset, the product help agent considers the previous context of the asset while answering the question. For example, if you ask questions to discover specific assets and then ask a help question related to the discovered asset, the product help agent retrieves the asset details and identifies the asset type. It then customizes its response based on the identified asset type and returns the most relevant response.

The product help agent leverages information available in the following help sources to assist you with your queries:

- Informatica documentation portal
- Knowledge Base articles
- How-To Library articles

Sample conversation

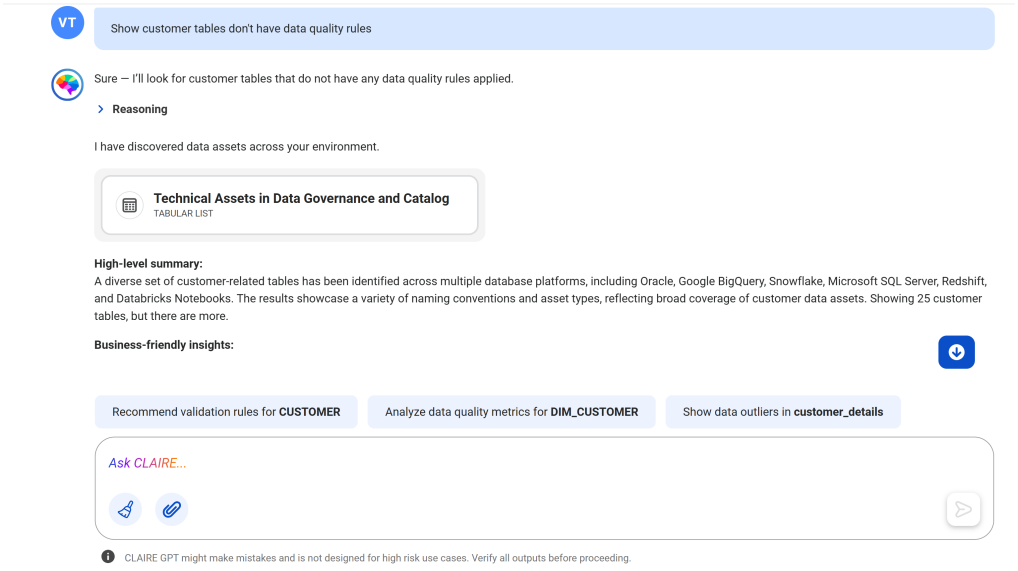

Let's take a look at a sample conversation to help you get started with queries about Informatica services in CLAIRE GPT.

Your organization maintains its catalog in Data Governance and Catalog. As a data steward, you want to discover customer tables that don't have data quality rules and learn how to add data quality rules to them. The tables containing customer information are available across various catalog sources and you want to specifically add data quality rules to a Snowflake table.

1. Log in to CLAIRE GPT.
2. Start a conversation to help you identify tables that contain customer information but don't have data quality rules.
   Enter the following prompt:

   ```
   Show customer tables don't have data quality rules
   ```

The following image shows the response displaying a set of customer tables that don't have data quality rules Data Governance and Catalog:

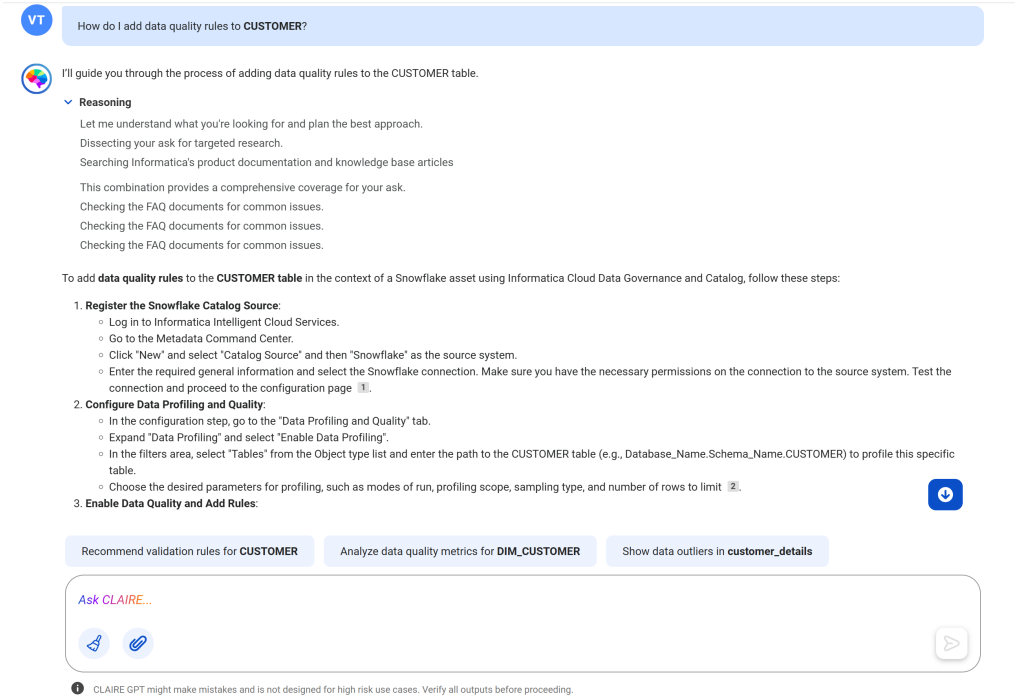

Using the data discovery skill, the discovery agent identifies all customer tables that don't have data quality rules applied. To view all the tables, click the card named **Technical Assets in Data Governance and Catalog**.

3. You have identified the CUSTOMER table from Snowflake and you want to learn how to add data quality rules to the table.
   Enter the following prompt:

   ```
   How do I add data quality rules to CUSTOMER?
   ```

The following image shows the response displaying information about how to create data quality rules for tables that belong to the Snowflake source system:

Using the product documentation research skill, the product help agent identifies that the CUSTOMER table belongs to the Snowflake source system and displays the information that you need to understand how to create data quality rules for a Snowflake table in Data Governance and Catalog. The agent uses the context of the metadata that is catalogued to provide specific responses.

You can navigate to the inline documentation link that CLAIRE GPT provides with each step in the response, get detailed instructions, or explore the other actions suggested by CLAIRE GPT.
