Preface

Read *Informatica QuickLook Browser Extension* to learn how to install, configure, and use the Informatica QuickLook browser extension to search for assets present in Data Governance and Catalog.

CHAPTER 1

Introduction to Informatica QuickLook

Informatica QuickLook is a browser extension for Google Chrome and Microsoft Edge web browsers. You can use the browser extension on Microsoft Windows and Mac operating systems.

Use Informatica QuickLook to search for business and technical assets in Data Governance and Catalog without opening the Data Governance and Catalog web page. You can look up assets from your catalog using search keywords. Use the browser extension to look up keywords from a web page to find the matching assets from your catalog.

Supported Files

The following table lists the file types that the Informatica QuickLook browser extension supports when you open the files in a web browser:

File Type	Host Location
PDF	- In an online location such as Google Drive or Microsoft SharePoint. - On your local computer.
- Microsoft Word - Microsoft Excel - Microsoft PowerPoint	In an online location such as, Google Drive or Microsoft SharePoint.

CHAPTER 2

Set up Informatica QuickLook

Set up the QuickLook browser extension to seamlessly interact with the data in your Data Governance and Catalog organization.

Before you begin using the Informatica QuickLook browser extension, ensure that you have access to your Data Governance and Catalog organization. To start using the browser extension, perform the following tasks:

1. "Install the browser extension" on page 6
2. "Configure the browser extension" on page 7
3. "Log in to the browser extension" on page 10

Install the browser extension

Install the Informatica QuickLook browser extension on your web browser. You can install this browser extension only on Windows or Mac operating systems.

- "Install the browser extension on Google Chrome" on page 6
- "Install the browser extension on Microsoft Edge" on page 7

Install the browser extension on Google Chrome

To install the browser extension to your Google Chrome browser, perform the following steps:

1. Go to the Chrome Web Store.
2. Search the store for the 'Informatica QuickLook' extension.
3. Click **Add to Chrome**.
4. Click **Add Extension** to approve the permissions that the extension needs to access the data in your organization.

   The Informatica QuickLook extension is added to your Google Chrome browser.

   Note: The Informatica QuickLook browser extension on Google Chrome uses multiple permissions to access the metadata in your organization. You might see certain warnings displayed by the Chrome Web Store that Informatica can't prevent the Chrome Web Store from displaying.

   For more information on the permissions that the Informatica QuickLook browser extension uses for Google Chrome, see the Knowledge Base article KB 000257452.

Install the browser extension on Microsoft Edge

To install the browser extension on Microsoft Edge:

1. In your Microsoft Edge browser, open the Google Chrome Web Store.
2. Search the store for the 'Informatica QuickLook' extension.
3. Click **Get**.
4. In the **Allow extensions from other stores** dialog box, click **Allow**.

5. To approve the permissions that the extension needs to access the data in your organization, click **Add Extension**.

   The Informatica QuickLook extension is added to your Microsoft Edge browser.

Configure the browser extension

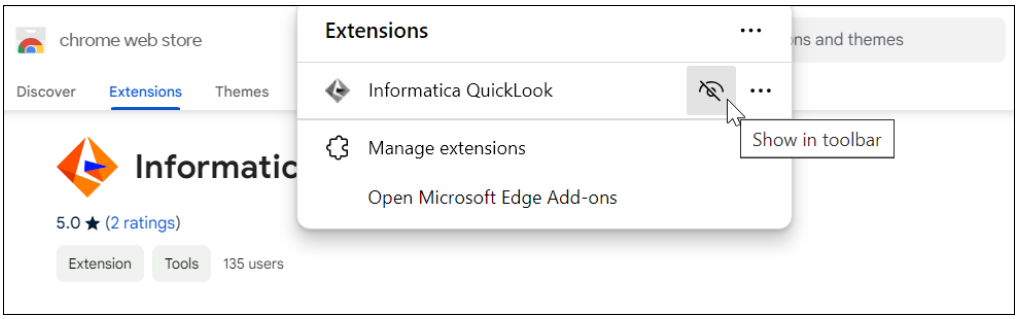

After you install the Informatica QuickLook browser extension to your browser, configure the extension to your organization's POD URL.

1. Click the **Extension** icon on your browser's toolbar.
2. Pin the Informatica QuickLook extension to the toolbar so that the extension is always accessible from the browser toolbar.

The Informatica logo appears on your browser toolbar after you pin the extension. The following image shows the option to pin the browser extension in Google Chrome:

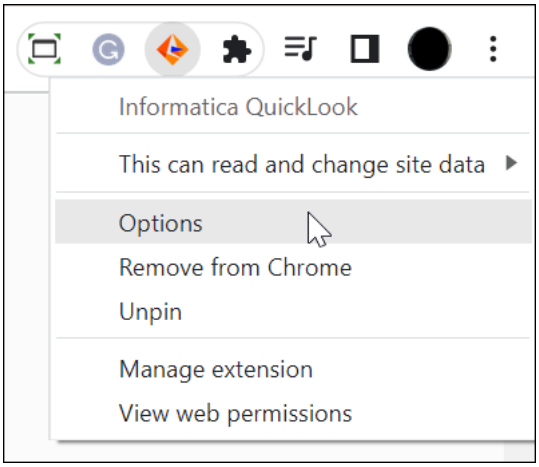

The following image shows the option to pin the browser extension to the toolbar of Microsoft Edge:

If you're logged in to Data Governance and Catalog, the extension can retrieve the POD URL from your login credentials. You can also manually enter the POD URL.

3. If you want to configure the POD URL on the browser extension page, right-click the Informatica logo from the toolbar of your browser, and select **Options** from the menu.

   The following image shows **Options** on the QuickLook menu:

   The Informatica QuickLook browser extension page opens on a new tab.

4. In the Informatica QuickLook dialog box, from the **Select POD Region** menu, select a POD region.

   The following image shows the Informatica QuickLook dialog box on the browser extension page:

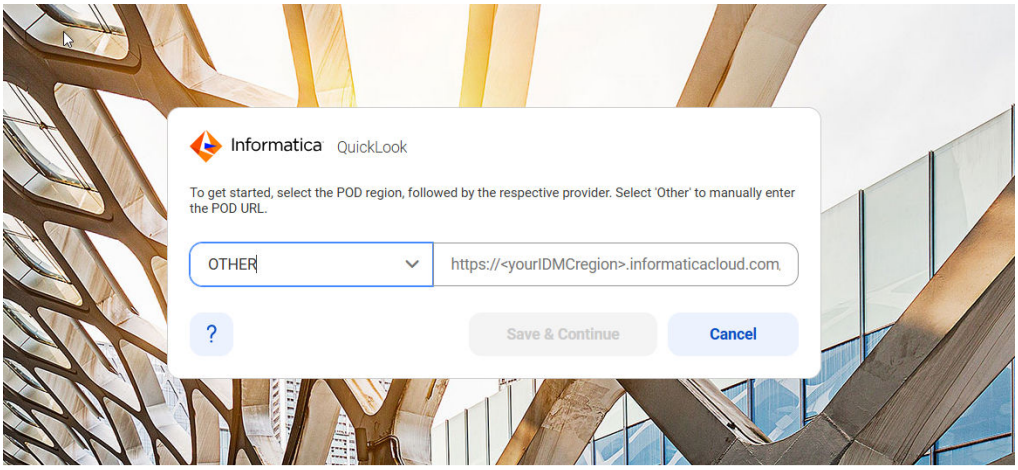

5. From the **Host Ecosystem** menu, select a host ecosystem.

   The browser extension auto-configures a POD URL based on your selection
   See POD Availability and Networking for information about your organization's region.

6. Optionally, select **Other** to manually enter a POD URL.

   The following image depicts the Informatica QuickLook browser extension when set to **Other**:

7. Click **Save & Continue**.

   The URL is saved.

Note: If you are part of a Google Workspace, when you first install the extension, your administrator can publish the default POD URL to QuickLook. For more information about creating a Google Chrome extension policy to configure the default POD URL, see the Knowledge Base article KB 000250060.

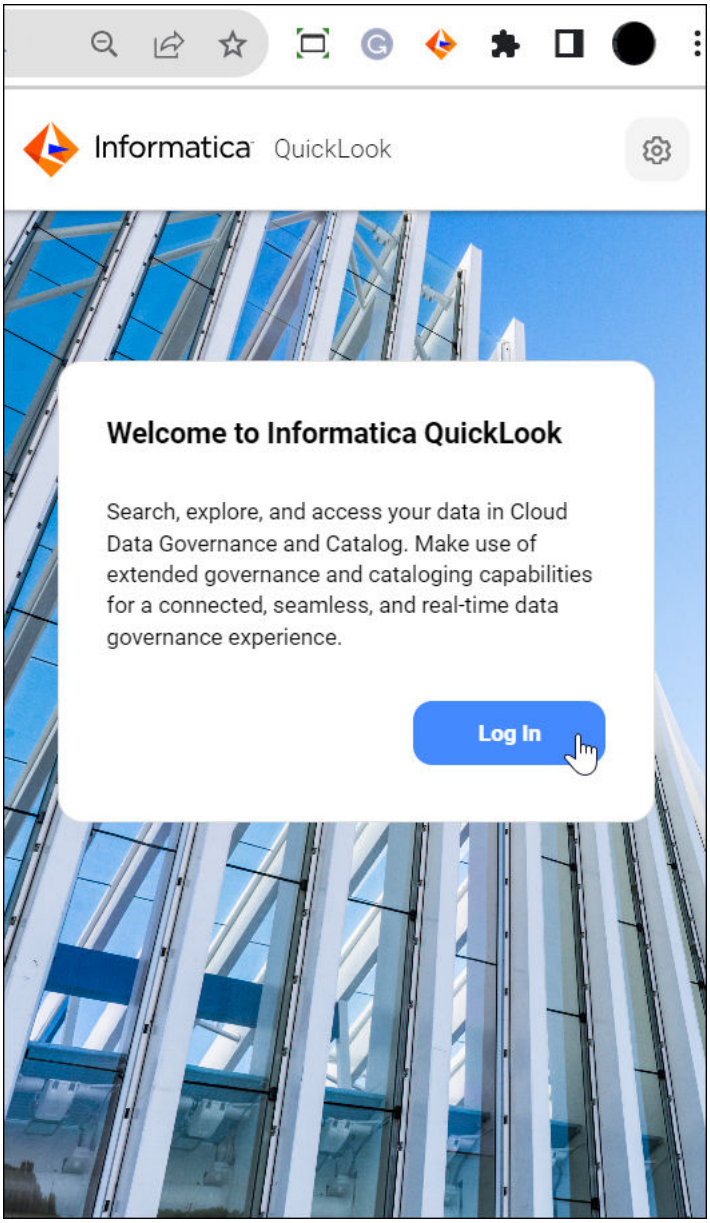

Log in to the browser extension

Log in to the Informatica QuickLook browser extension with your Intelligent Data Management Cloud™ (IDMC) credentials. If you are already logged in to the Data Governance and Catalog web instance, the QuickLook browser extension automatically logs you in.

To launch the browser extension, open a web page in the browser. You can't launch the extension unless a browser page is open. If you have a web page that is already open, refresh the web page to launch the browser extension.

You can start searching for assets in the Informatica QuickLook browser extension only after you log in.

1. On the browser toolbar, click the Informatica QuickLook logo.
2. Click **Log In**.

A new window opens and you are redirected to the IDMC Log In page for the configured region URL.

3. Enter your IDMC user name and password or log in using Single Sign-On (SSO).
4. Click **Log In**.

   Note: Similarly, if you log out of the Data Governance and Catalog instance linked to the extension, the QuickLook browser extension logs you out.

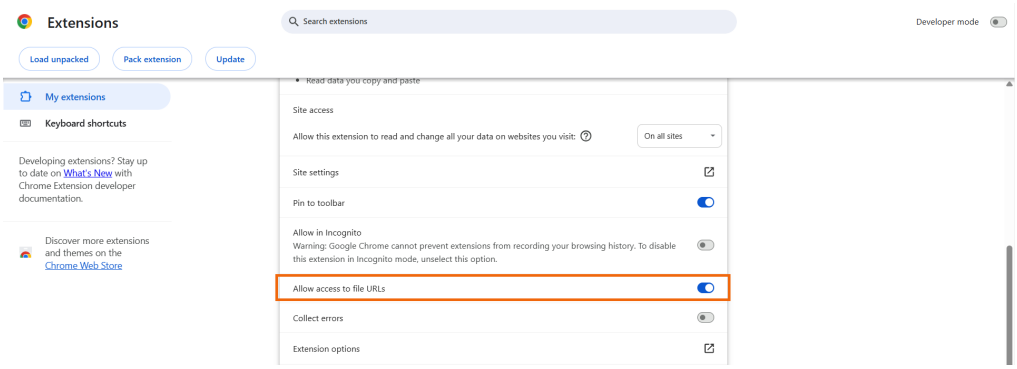

After you log in, you can start searching for assets.

Configure keyboard shortcuts

Configure keyboard shortcuts to interact with Informatica QuickLook. Use a unique combination of keys for each shortcut setting.

Configure keyboard shortcuts to activate the extension and search for assets. You can use the shortcuts on a web page or a file that you open in Google Chrome to search for a copied or selected keyword. For more information about how to search using keywords from a web page, see "Search in the context of a web page" on page 17.

1. Right-click the Informatica logo from the toolbar of your browser, and select **Manage extensions** from the menu.
2. On the **Extensions** page of the browser, select the **My extensions** option.
3. Enable the **Allow access to file URLs** option.

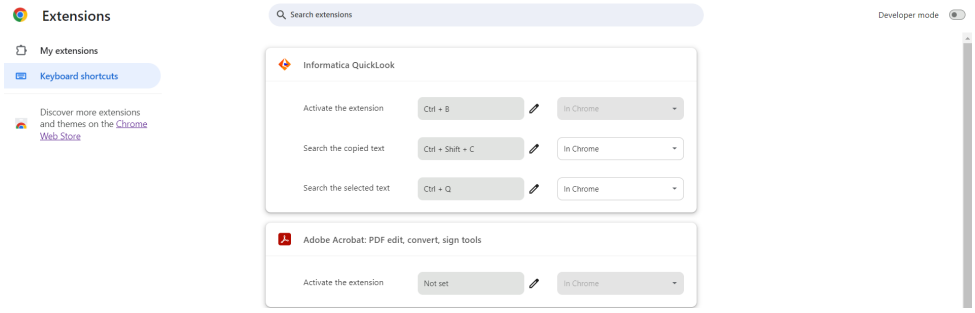

4. On the **Extensions** page of the browser, select the **Keyboard shortcuts** option.
5. On the **Keyboard shortcuts** tab, enter the following keyboard shortcut combinations:
   a. Enter `Ctrl + B` in the **Activate the extension** field to open or close Informatica QuickLook.

      Note: `Ctrl + B` is not the default keyboard shortcut.

   b. Enter `Ctrl + Shift+ C` in the **Search the copied text** field to search for any text in Informatica QuickLook that you copied to the clipboard from a web page.

c. Enter `Ctrl + Q` in the **Search the selected text** field to search for any text in Informatica QuickLook that you copied to the clipboard from a web page.

Note: In PDF files and Microsoft Office files that you open in a browser, you can search only for copied text. The keyboard shortcuts might not work on websites that have disabled right-clicks or impose other restrictions.

CHAPTER 3

Search and view assets in Informatica QuickLook

You can use the Informatica QuickLook extension in many ways to search for assets.

When you search for assets in the Informatica QuickLook extension, you can view assets and their attributes depending on the permissions that your organization administrator assigns to you through access policies in Metadata Command Center. For information about how administrators manage access to assets, see the *Asset Management* help.

After you log in, you can search for assets in the Informatica QuickLook browser extension in one of the following ways:

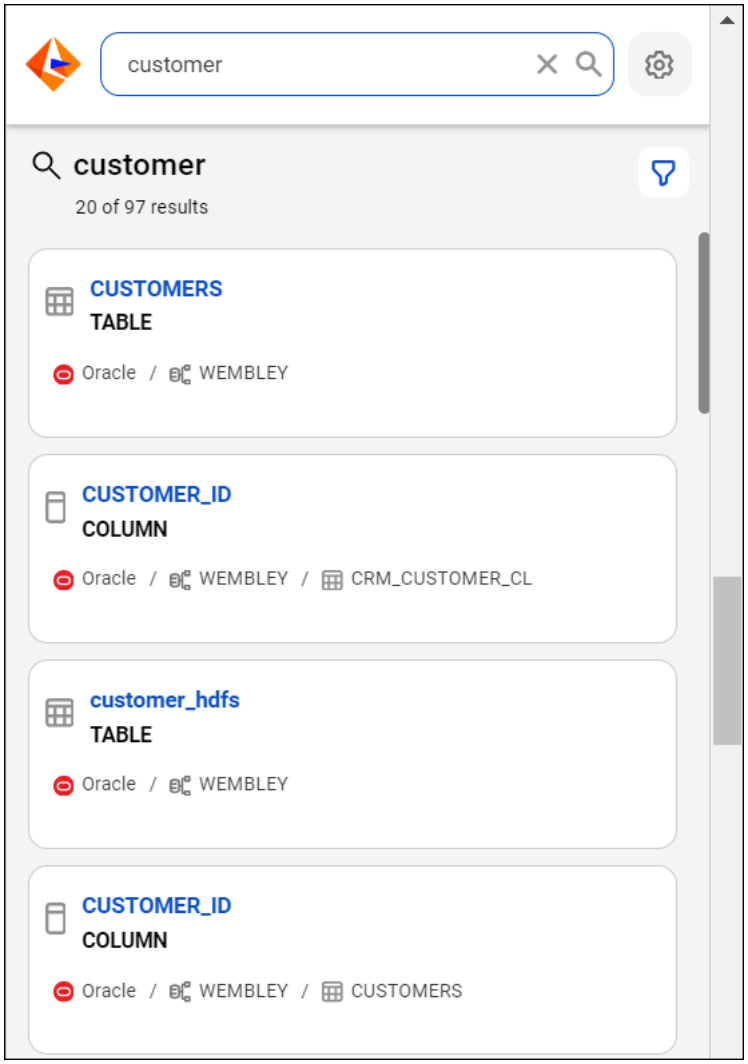

- "Search using keywords" on page 13
- "Search in the context of a web page" on page 17
- "Detect assets from Power BI " on page 18

Search using keywords

Use keywords to look up assets in Informatica QuickLook.

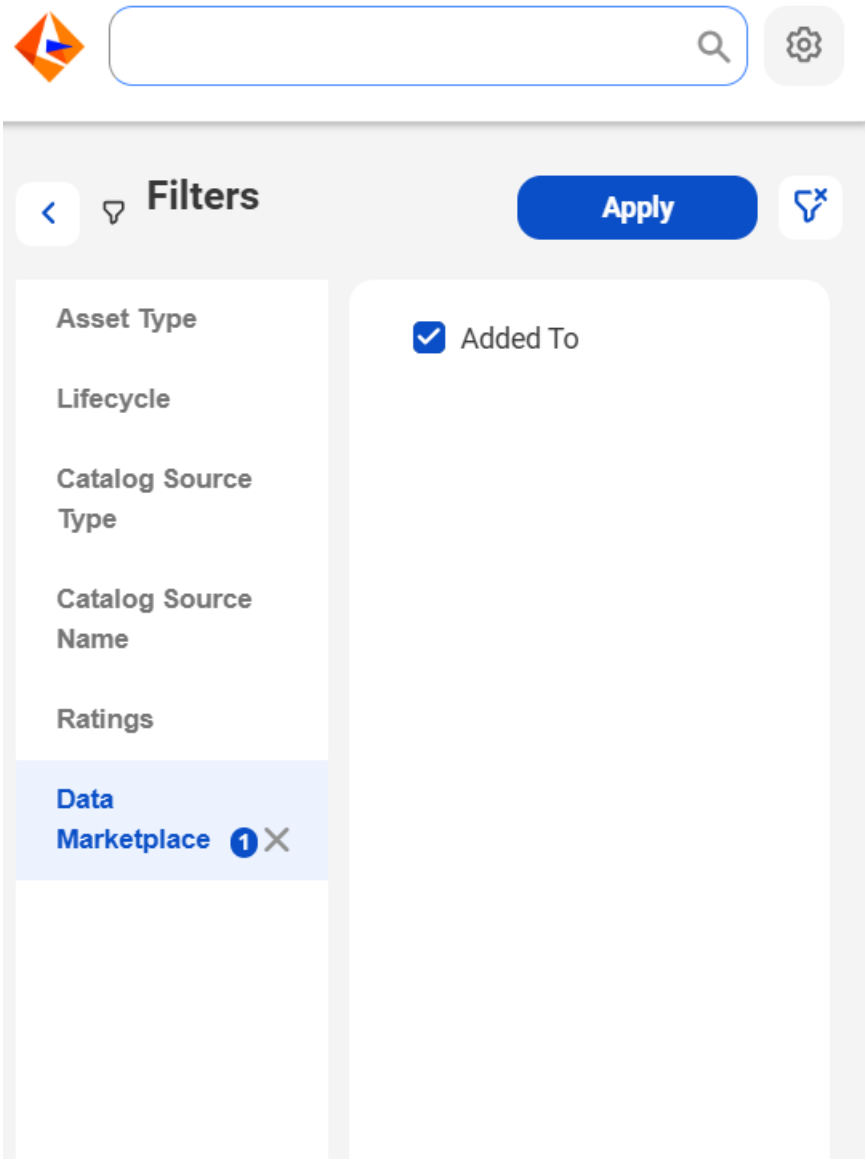

After you log in to Informatica QuickLook, enter keywords in the **Search** bar. The browser extension displays relevant results from your catalog. The search is limited to 100 results.

The following image shows up to 100 results of a search made using a keyword in the Informatica QuickLook browser extension:

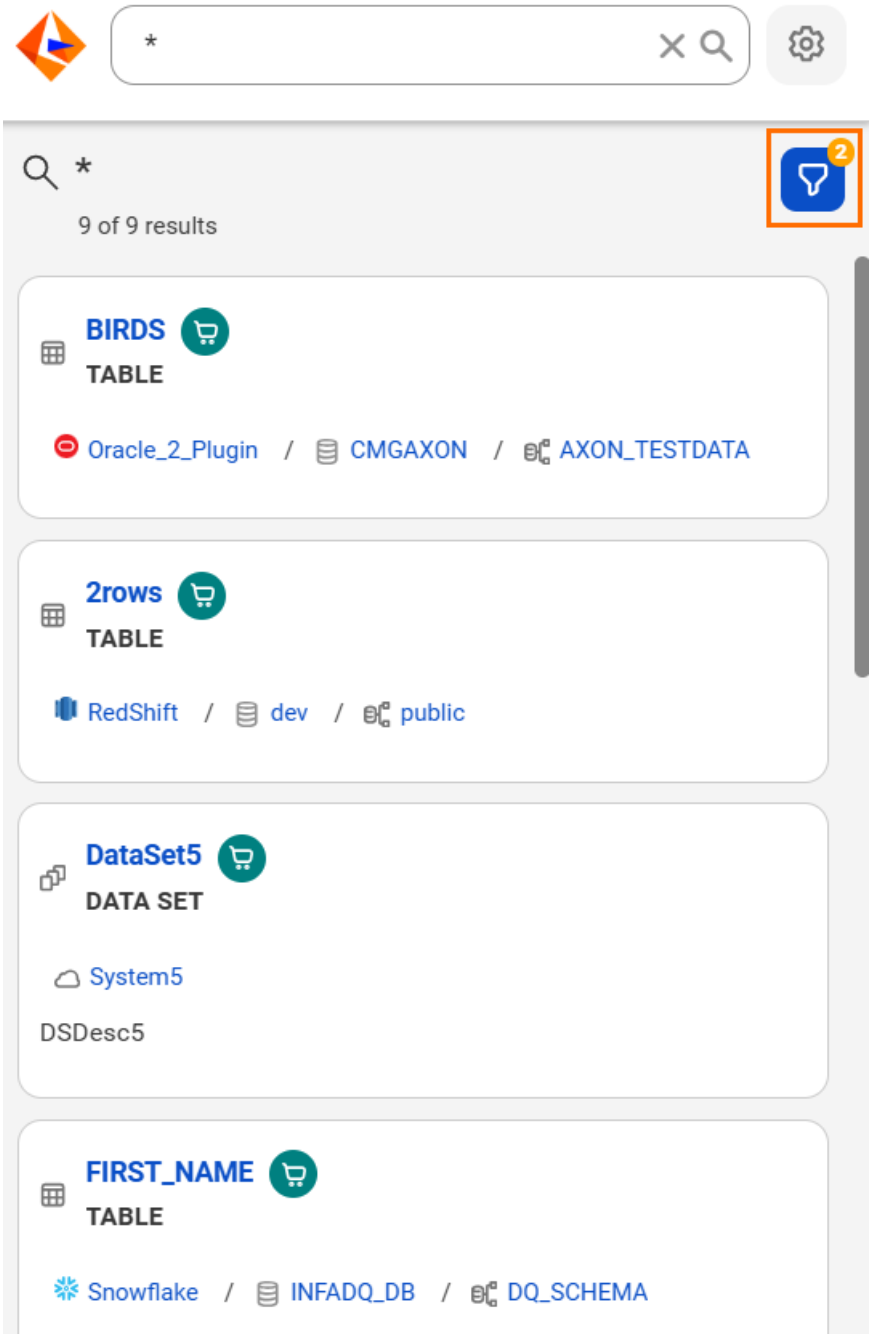

To narrow down the search results to specific assets, click the **Filters** icon and apply the necessary filter options. The filter options that appear depend on the search keywords that you enter in the search bar.

The following image shows the possible filter options available for business and technical assets in Informatica QuickLook:

If the Data Marketplace Administrator connected Data Marketplace to Data Governance and Catalog, the **Filters** pane displays the **Data Marketplace** filter. Use **Data Marketplace** > **Added To** filter to discover Data Governance and Catalog assets added by stakeholders to data collections in Data Marketplace. You can also view the data collections that are associated with these assets and open the data collections in Data Marketplace.

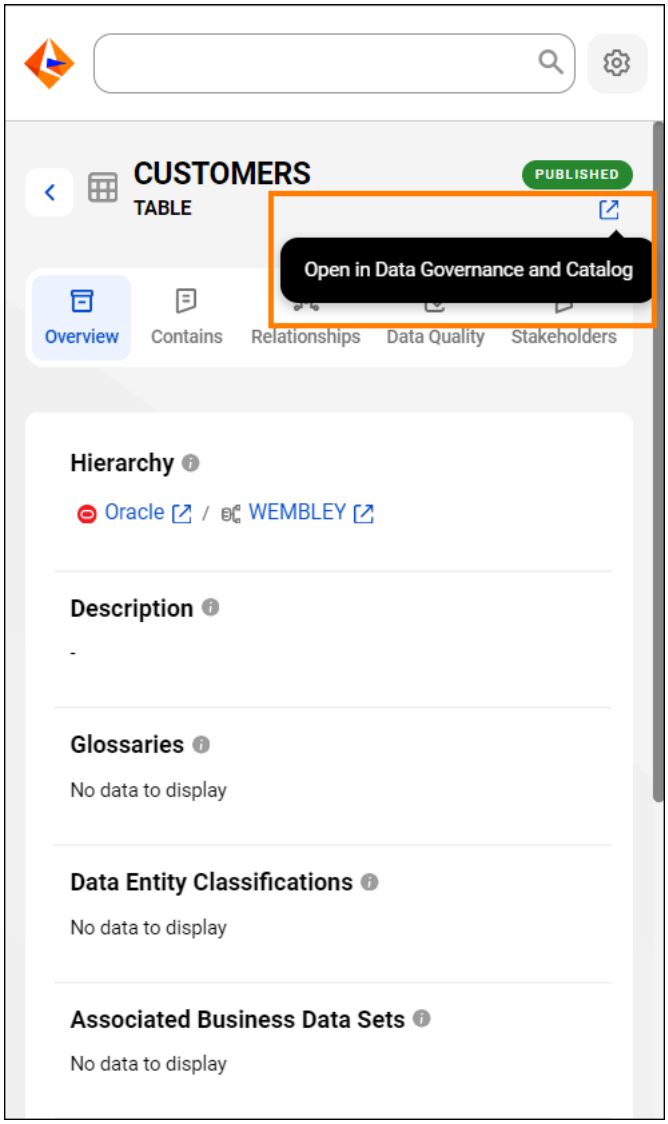

After you apply the filters, the **Filters** icon displays the total number of filter options that you applied. The following image highlights the total number of filter options applied on the search:

Click any asset name to see all the details of the asset. The asset opens on a new page in Informatica QuickLook. To understand what each tab on the asset page means, see the *Understanding Business Assets* and *Understanding Technical Assets* help modules. The end of each asset page displays up to 10 more search results that you can access without returning to the search results page.

To see complete details of an asset, such as the lineage of any asset, click the **Open in Data Governance and Catalog** icon next to the asset name. The extension redirects you to the asset page in Data Governance and Catalog.

The following image highlights the **Open in Data Governance and Catalog** icon on an asset page in the browser extension:

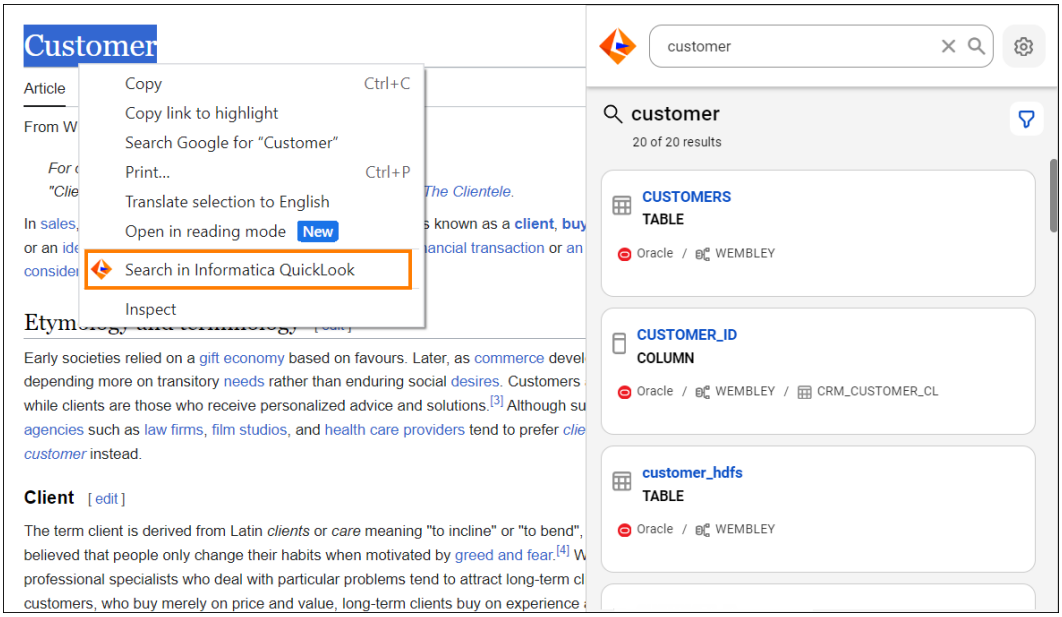

Note: You can see the details of all business and technical asset types in the Informatica QuickLook browser, except for Data Quality Rule Template and Data Quality Rule Occurrence.

Search in the context of a web page

Look up keywords from a web page and find the relevant assets in your catalog.

To look up keywords from a web page, select the text to query and right-click the text. From the menu, select **Search in Informatica QuickLook**. The browser extension window displays the results of the search related to the selected text. Alternatively, you can select the text and use a keyboard shortcut to search the selected text. The default hotkey to search the selected text in Informatica QuickLook on Windows is `Ctrl + Q`. See "Configure keyboard shortcuts" on page 11.

The following image shows the selected text on a web page and the option to search in Informatica QuickLook along with the result of the search in the browser extension:

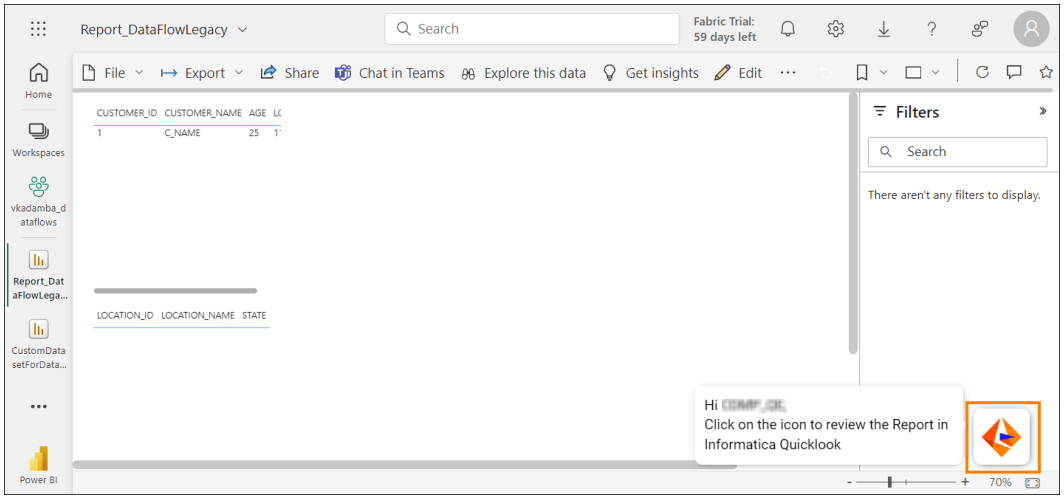

Detect assets from Power BI

The Informatica QuickLook browser extension automatically detects matching assets in Data Governance and Catalog from your Power BI web application.

When you log in to the Microsoft Power BI web application, the browser extension detects the Power BI reports and dashboards. It then matches them against the Power BI reports and dashboards in your Data Governance and Catalog organization. When a successful match is found, it displays the Informatica icon on the right corner of the Power BI asset page in the web application. You can click this icon to open the matching Power BI asset in the browser extension.

Note: To detect assets from an existing Power BI catalog source, you run a full scan of the existing catalog source after you upgrade to the November 2023 version.

The following image shows a sample report in the Power BI web application and the Informatica icon on the right corner of the page:

The following image shows a sample dashboard in the Power BI web application and the equivalent Power BI dashboard in Informatica QuickLook:
