Preface

Read the *What's New* for a brief overview of new features, enhancements and behavior changes in Data Marketplace.

CHAPTER 1

April 2026

The following topics provide information about new features, enhancements, and changes in the April 2026 release of Data Marketplace.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
April 16, 2026	Added	"Unique tab for each data collection request" on page 9
March 11, 2026	Initial publication	

Important notices

The April 2026 release of Data Marketplace includes the following important notices.

Compare now included in My Cart

The navigation panel on the left no longer shows the **Compare** page. Instead, compare is included within the **My Cart** page which is found in the header on the right corner.

The **My Cart** experience preserves the compare functionality so you can compare data collections that you add to your cart.

New features and enhancements

The April 2026 release of Data Marketplace includes the following new features and enhancements.

Watch the following What's New video to learn about the new features and enhancements in the April 2026 release:

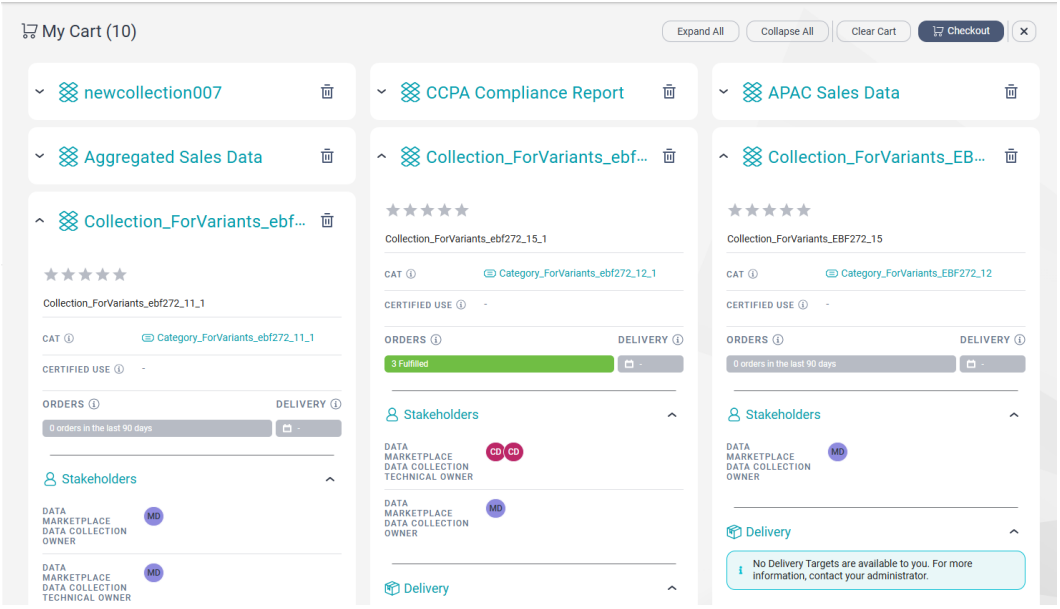

Ordering multiple data collections using My Cart

Data Marketplace introduces the **My Cart** page from where you can order multiple data collections simultaneously.
The **My Cart Checkout** process provides you the flexibility to use the same details for all the data collections that you order, or to specify different information for each data collection in your cart.

You can also use the **My Cart** page to compare data collections that interest you. You can compare and order up to 10 data collections from **My Cart**.

Note: Ordering multiple data collections provides a new capability to how you order data collections. You can still order a single data collection in Data Marketplace using the **Checkout** button.

The following image shows the **My Cart** page:

For more information about ordering data collections, see *Order data collections* in the *Working with Data Collections* help.

Enhancements for Data Governance and Catalog integration

Import all assets from Data Governance and Catalog

You can import all business and technical assets from Data Governance and Catalog into Data Marketplace. The import includes existing business assets, predefined and custom catalog sources, and assets that you add to Data Governance and Catalog.

The new asset types that you import from Data Governance and Catalog after this upgrade will not be available for use by default regardless of their compatibility values. You must manually enable them for use if you want to add additional asset types.

Search, activate, and filter asset types

In the **Data Governance and Catalog Asset Types** section, you can search for asset types that are imported from Data Governance and Catalog.

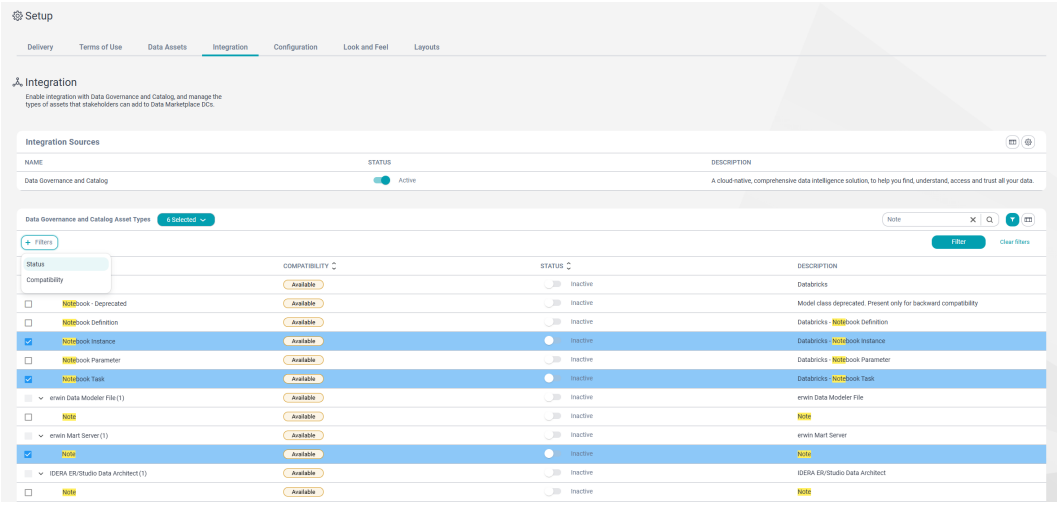

For assets that are not activated, you can select multiple inactive asset types and activate them simultaneously.

You can also apply filters based on status and compatibility to refine your search results.

Hierarchy for asset types

When you search for an asset type, the **Data Governance and Catalog Asset Types** section shows assets in an hierarchical view. If you select assets, you select only the searched asset and not the parent assets.

The following image shows the **Integration** tab:

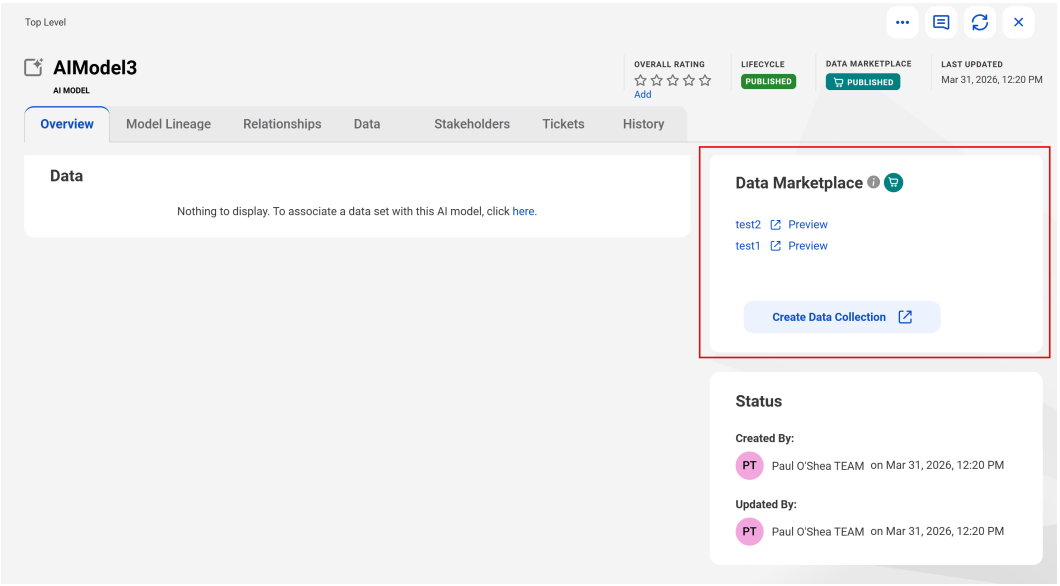

For more information about integrating Data Governance and Catalog, see *Enrich data collections with Data Governance and Catalog* in the *Set Up Data Marketplace* help.

Create data collections from Data Governance and Catalog

From an asset page in Data Governance and Catalog, you can create a data collection in Data Marketplace. You can create data collections for asset types that are enabled for use from the **Integration** tab on the **Setup** page in Data Marketplace.

The following image shows a Data Governance and Catalog asset page:

For more information about creating a data collection, see *Creating data collections* in the *Working with Data Collections* help.

Changed behavior

The April 2026 release of Data Marketplace includes the following changed behavior.

Enhancements to custom layouts

When you modify an item with a custom layout applied, Data Marketplace displays only the attributes that are also visible outside edit mode.

The following items have a consistent experience between view and edit modes:

- Category
- Consumer access
- Data asset
- Data collection

Previously, in edit mode, Data Marketplace displayed all configured attributes for an item, including the attributes that were excluded from the custom layout.

Auto-population of asset type descriptions

When you import assets from Data Governance and Catalog, asset type descriptions are auto-populated from the source. The asset type descriptions provide context that is consistent with the source.

Previously, asset type descriptions were inconsistent with the integration source.

Unique tab for each data collection request

When you request a new data collection, Data Marketplace opens a new tab for each request.

Previously, opening a new data collection request while one was already open in a tab would cause Data Marketplace to update the existing tab.

CHAPTER 2

November 2025

The following topics provide information about new features, enhancements, and changes in the November 2025 release of Data Marketplace.

Changelog November 2025

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
November 21, 2025	Updated	"Invoke an API without using Application Integration " on page 11
November 13, 2025	Added	"Data Marketplace asset discovery in QuickLook" on page 13
November 13, 2025	Added	"Generating JSON Web Token (JWT) to authenticate REST API requests" on page 15
November 13, 2025	Modified	"Invoke an API without using Application Integration " on page 11
November 4, 2025	Modified	"Changes to metrics calculation updates" on page 16
November 4, 2025	Modified	"Microsoft Azure private link on Azure Japan POD" on page 11
October 28, 2025	Initial publication	

Important notices

The November 2025 release of Data Marketplace includes the following important notices.

Microsoft Azure private link on Azure Japan POD

You can use Azure private link with Data Marketplace on the AP NorthEast 1 and AP NorthEast2 Microsoft Azure PODs.

For more information about Microsoft Azure private link configuration, see the following How-To Library article: *Microsoft Azure Private Link Onboarding Guide for Informatica Intelligent Cloud Services*.

New features and enhancements

The November 2025 release of Data Marketplace includes the following new features and enhancements.

Watch the following What's New video to learn about the new features and enhancements in the November 2025 release:

Invoke an API without using Application Integration

You can use REST APIs to perform the following tasks by using JSON web token authentication:

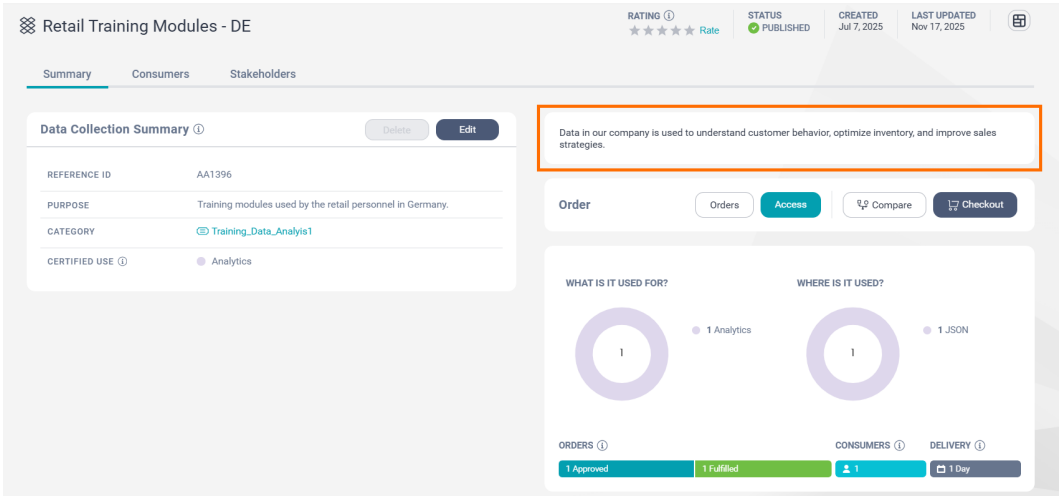

- Create, retrieve, modify, or delete a category.
- Create, retrieve, modify, or delete a data collection.
- Add or remove data assets from a data collection, and retrieve the data assets of a data collection.
- Retrieve the consumer accesses of a data collection.
- Create, retrieve, modify, or delete a delivery target.
- Create, retrieve, approve, fulfill, cancel, reject, or delete an order.
- Create, retrieve, modify, or delete a consumer access.
- Submit a consumer access withdrawal request, cancel a withdrawal request, or withdraw a consumer access.

For more information about how you can use JWT authentication to invoke APIs, see the *Authenticate using JWT* topic in the *API Reference* help.

Customization enhancements

A new **Text Box** page component is introduced for Data Marketplace layout customization. You can use this page component to specify additional information beyond what is already available on a page and also tailor the information that is displayed on the page component to each Data Marketplace role.

The following image shows a sample **Text Box** page component on a data collection page:

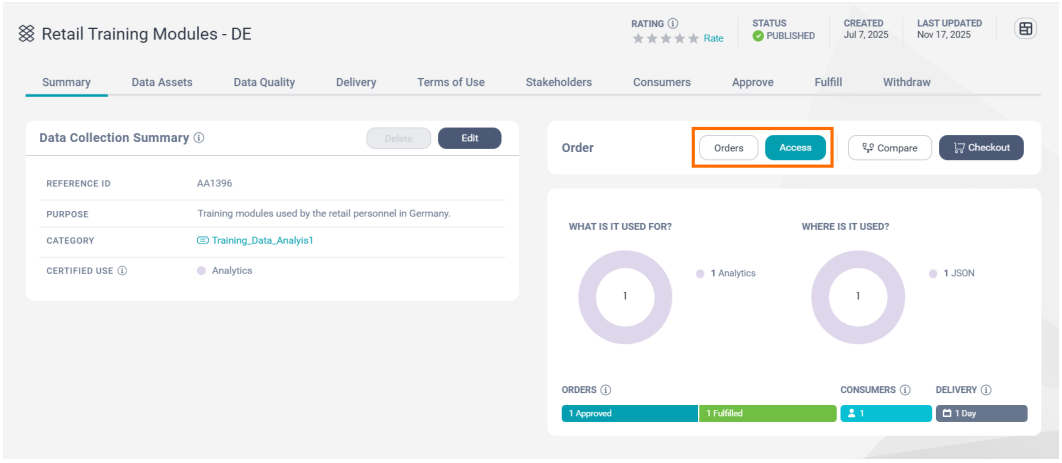

For more information about how you can configure layouts in Data Marketplace, see the *Customize Data Marketplace* topic in the *Set Up Data Marketplace* help.

View your orders and accesses on a collection

If you have an active order or access for a data collection, the **Order** section on a data collection page displays the **Orders** and **Access** buttons next to the **Checkout** button. The additional buttons open your active orders and latest active access for the data collection. If you have only an order or only an access, the **Order** section displays only the corresponding button.

The following image shows the **Order** section on a data collection page:

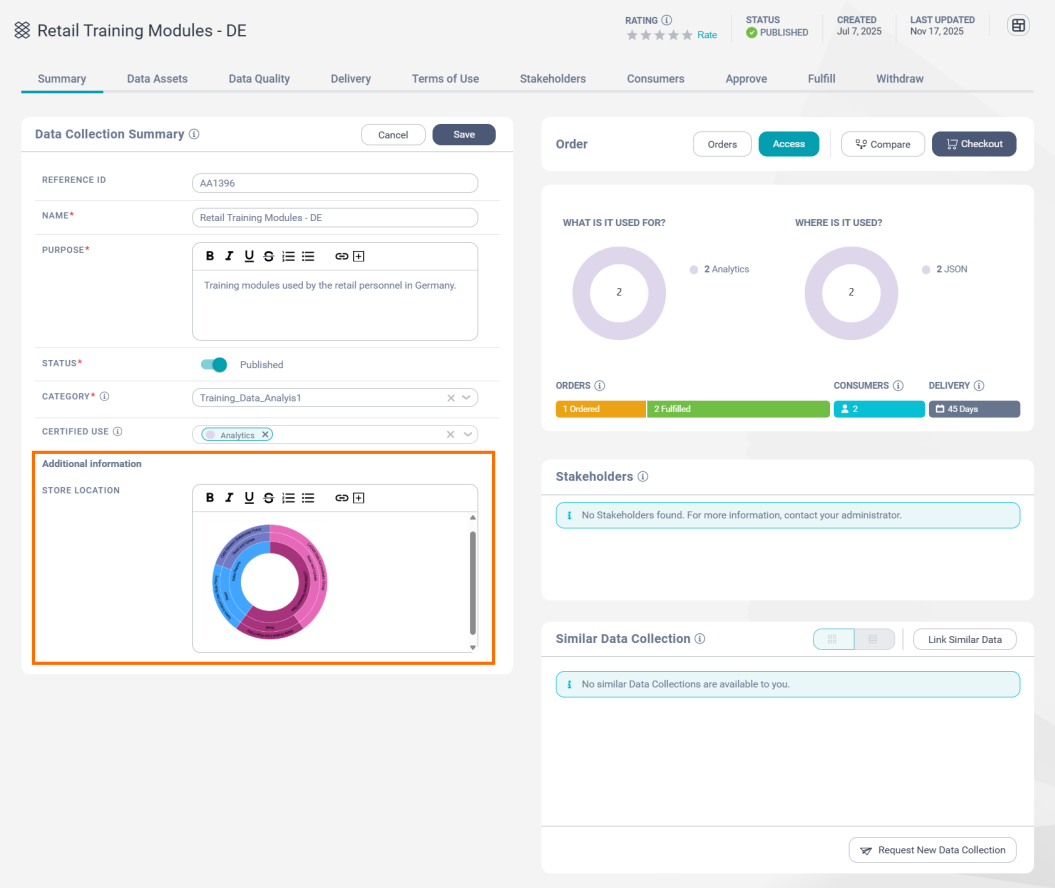

For more information about the **Order** section, see the *Order section* topic in the *Introduction and Getting Started* help.

Add images to custom attributes

For custom attributes that support rich text, you can upload images.

The following image shows a custom attribute of a data collection page:

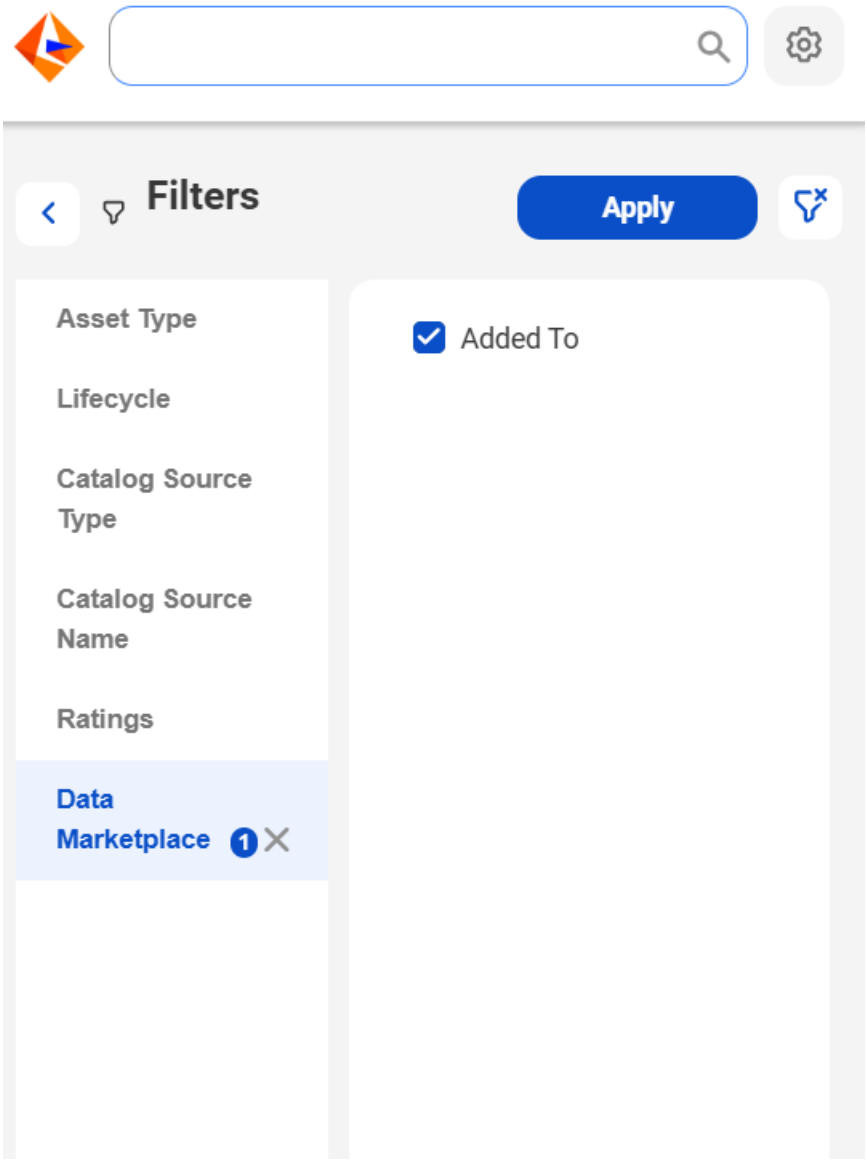

Data Marketplace asset discovery in QuickLook

Informatica QuickLook is a browser extension for Google Chrome and Microsoft Edge web browsers. You can use Informatica QuickLook to search for assets in Data Governance and Catalog without opening the Data Governance and Catalog web page.

The QuickLook browser extension introduces the **Data Marketplace** filter that enables you to discover Data Governance and Catalog assets that are added by stakeholders to data collections in Data Marketplace. You can also view the data collections that are associated with these assets and open the data collections in Data Marketplace.

The following image shows the **Data Marketplace** filter in the Informatica QuickLook browser extension:

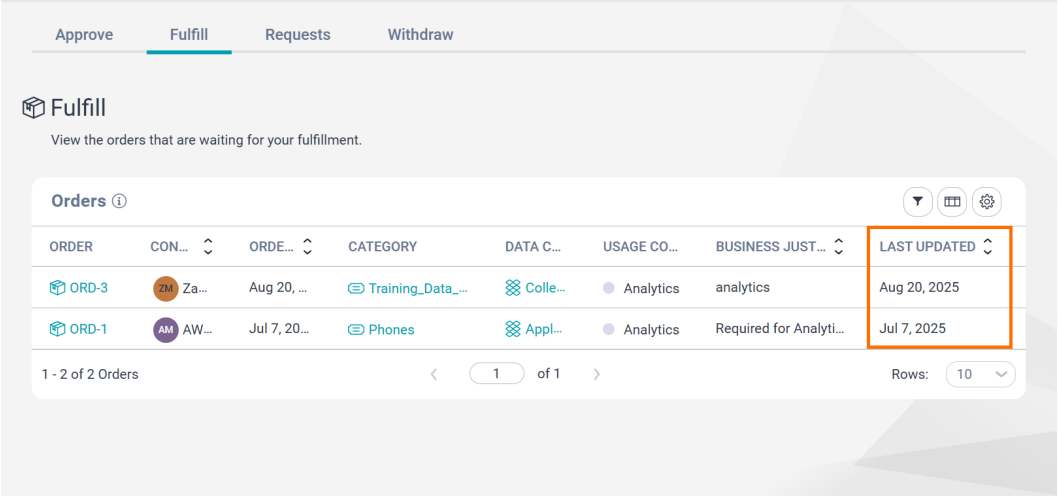

For more information about how you can search for assets in QuickLook, see the *Informatica QuickLook Browser Extension* help in Data Governance and Catalog.

View the latest modified orders

You can use the **Last Updated** field to view the latest date on which the orders were modified. You can view the field on the following pages:

- The **Orders** tab on the **History** page
- The **Approve** tab on the **Tasks** page
- The **Fulfill** tab on the **Tasks** page

The following image shows the **Last Updated** field on the **Fulfill** tab on the **Tasks** page:

Generating JSON Web Token (JWT) to authenticate REST API requests

To authenticate users to REST API endpoints, your organization administrator might choose the JSON Web Token-based authentication method in Administrator. This method doesn't require the session ID to generate the JWT token. However, generating the JWT token from the session ID remains the default.

If the organization administrator has configured JSON Web Token authentication in Administrator, the login API in Data Marketplace returns the JWT value in the `IDS-SESSION-ID` field. With this method, you can authenticate to REST API endpoints with only the JWT token.

For more information, see the JWT Support Knowledge article.

Changed behavior

The November 2025 release of Data Marketplace includes the following changed behavior.

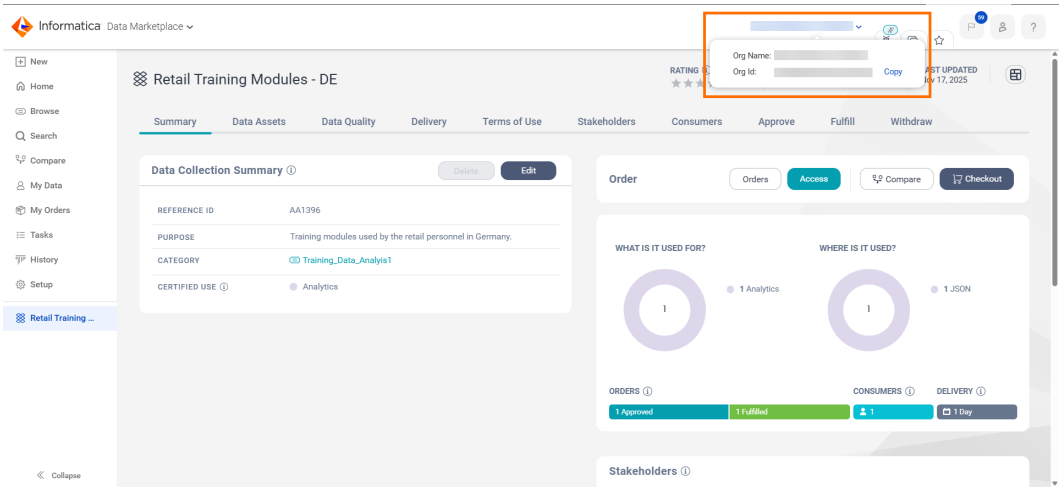

Changes to delivery location in delivery targets

When you hover over the **Location** field of a delivery target, Data Marketplace no longer displays the complete delivery location. As a consumer, you can still view the delivery location on the consumer access page for the data after you are granted access to the data collection.

View the organization ID

Data Marketplace now displays the organization ID at the top of the user interface. For more information about the organization ID, see the Administrator help.

The following image shows the organization ID of a sample organization:

Changes to metrics calculation updates

On the **My Data** page and the data collection pages, the metrics are now aggregated and updated on a scheduled basis through a job that executes every six hours. Previously, the metrics on the Data Marketplace interface were aggregated after each update.
