For information about new features and enhancements, see *What's New*.

Fixed issues

The tables in this section describe recent fixed issues for Data Marketplace.

July 2026 fixed issues

Issue	Description
CDMP-31087	When you update the parent category of a data collection category, Data Marketplace doesn't process the deletion and the relationship persists.
CDMP-31040	If your organization has more than 10 stakeholder roles, some users who are assigned as stakeholders can't see the **Data I Own** tab.
CDMP-31024	Data Marketplace assigns you a predefined role and a custom role simultaneously. Other users can't tag you as a stakeholder in order comments.
CDMP-31012	When you call the GET **/api/v2/data-collections/<dataCollectionId>** endpoint, the response always returns 20 records. Even if the data collection contains more than 20 items, the behavior occurs regardless of the limit value you specify.
CDMP-31010	When you use **My Cart** to submit an order, the stakeholders of the ordered data collections don't receive notifications in Data Marketplace or through email.
CDMP-30939	If a Terms of Use URI or URL contains an ampersand (&), Data Marketplace encodes the character incorrectly and the link breaks. The Terms of Use link reaches a non-functional URL and you can't access the document. For example, the URL `https://example.com/terms?lang=en&version=2` is encoded as `https://example.com/terms?lang=en&ampversion=2`.
CDMP-30936	You can complete a Data Collection Request by linking a collection for which you are not a stakeholder. This sends the request to the completed state with the requester unable to access the associated Data Collection.

Issue	Description
CDMP-30919	On the **Browse** page, you can't select a custom Guide Me layout. When you click the layout button, only the default option appears despite configuring a custom layout in the **Setup** page.
CDMP-30898	When you open a data collection that uses a custom layout with a button element, the page fails to load, and displays an error.

April 2026 fixed issues

Issue	Description
CDMP-30427	If you use an API to add multiple stakeholders with different roles to a data collection, the API adds stakeholders for only one role to the collection.
CDMP-30385	When you use a bulk import template to create consumer accesses for a data collection, the bulk import operation fails if a user group that is added as a stakeholder of the data collection is deleted from Administrator.
CDMP-30344	If you enter a value that contains spaces in the `costCenter` request parameter for the PATCH **/api/v2/orders/<orderId>/fulfill** endpoint, the API call fails.
CDMP-30314	When you modify a label on the **Setup** > **Configuration** page, you can add an image to the **Marketplace Description** field. Images are not allowed in this field.
CDMP-30293	If a SAML user isn't assigned a first name or a last name, Data Marketplace indicates that the user is deleted.
CDMP-30245	If the JW token that you use to authenticate Data Marketplace API calls doesn't include the `client_id=idmc` parameter, the API call fails.
CDMP-30169	When you clone the default layout for a data collection page, if you drag and drop the page component into the layout, the cloned layout doesn't display the name of the **Buttons** page component.
CDMP-30020	When using the **Stakeholders** filter, if you type a search query and then immediately edit it, the search results become inaccurate.
CDMP-29143	When you import an asset from Data Governance and Catalog to Data Marketplace, the import also includes reference assets, which causes duplicate data elements to appear on the asset page.
MDP-12156	On data collection pages, you cannot modify stakeholders in the **Stakeholders** tab. The stakeholder propagation job fails intermittently and fails to recover.

January 2026 fixed issues

Issue	Description
CDMP-29050	On the **Setup** > **Integration** tab, Data Marketplace doesn't display all the Data Governance and Catalog technical assets that are imported from the Qliksense source system into Data Governance and Catalog.

November 2025 fixed issues

Issue	Description
CDMP-29414	When you try to preview a custom layout, Data Marketplace displays an error if the layout contains a page component that has a multi-select type custom attribute.
CDMP-29280	When you use a bulk create template to create data assets, Data Marketplace displays an error if the template file that you used contains empty rows on which formatting is applied.
CDMP-29177	When you create a custom layout for the **Search** page and hide the **Additional Information** section on the **Other Items** tab, the **Other Items** tab on the actual search results page continues to display the **Additional Information** section.
CDMP-29006	On the **Setup** > **Layouts** tab, the **Layouts** grid does not load if it contains a custom layout that is associated with a custom role that is deleted in Administrator.
CDMP-28922	On a consumer access page, Data Marketplace displays the **Edit** button even when no custom attributes that you can modify are configured for the consumer access.
CDMP-28872	When you configure the Stakeholders page component on a custom layout, Data Marketplace doesn't display the component correctly on the page for which you created the custom layout.
CDMP-27018	When you use a REST API to modify a data collection, the API call fails, but the changes that you made to the data collection are still applied. However, if you modify the stakeholders of the data collection, your changes are not applied.

Known issues

The tables in this section describe recent known issues for Data Marketplace.

July 2026 known issues

Issue	Description
CDMP-30967	On the **Browse** page, you can't expand or compress the category tree side panel to adjust your view of the category tree.
CDMP-26711	As a category owner, you can't create an unpublished data collection. The operation fails with a server error.

February 2025 known issues

Issue	Description
CDAM-4045	When using Managed Access in Data Marketplace with an Oracle source system, if the Oracle connection permissions are incorrect, it might fail silently, not presenting any tables to the user.
CDAM-1447	An error occurs when you attempt to query a data source with certain PostgreSQL data types. For a list of data types that you can use, see "Data Types" in the Data Governance and Catalog help.

November 2024 known issues

Issue	Description
CDMP-26685	When you try to assign a parent to a category that is assigned an asset group that is a child to another asset group, the **Parent Category** field displays only the categories that are within the category's asset group. The field doesn't display the categories within the category's own asset group's parental hierarchy. For example, consider a category `US-Retail` that is added to the asset group `US-Personnel`. The `US-Personnel` asset group contains 2 other categories and the `US-Personnel` asset group is a child of another asset group `Global-Personnel` that contains 8 categories. When you try assign a parent category to `US-Retail`, the **Parent Category** field displays only the 2 categories within the `US-Personnel` asset group instead of 10 categories from both the `US-Personnel` and `Global-Personnel` asset groups. **Workaround**: Remove the asset group from the category to which you want to assign a parent category. After you have assigned a parent category, you can add the asset group back to the category.
CDMP-26509	You can't create an unpublished data collection in a category for which you are responsible even if you are assigned the Category Owner user role.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link: https://www.informatica.com/services-and-training/customer-success-services/contact-us.html.

To find online support resources on the Informatica Network, visit https://network.informatica.com and select the Support option.
