Preface

Read *Working With Data Collections* to learn how to create, find, modify and deliver data collections.

Note: If some of the terms that are used on this help differ from what is displayed on the Data Marketplace interface, contact your Data Marketplace Administrator to understand the terminology defined for your organization. For more information, see the *Label Customizations* topic in the *Set Up Data Marketplace* help.

CHAPTER 1

Access data collections

In Data Marketplace, you can find data collections, compare them, and place orders to access the relevant data. You can use data collections to support business decisions with the appropriate data.

When viewing a data collection, you also view the data assets it might contain. You can use these assets to discover associated data collections that are worth exploring.

If multiple data collections are of interest, you can compare them to decide on the collections that you need. If you find no data collection for your purpose, you can request a new data collection from a similar data collection or from a related category. You can also rate and add comments to help other users evaluate a data collection and inform stakeholders of the quality of data.

Search and view data collections

You can search for data collections and view their properties to determine which collections meet your requirements.After you find suitable data collections, you can place an order to gain access to them.

On the **Search** page, enter a search query or a keyword in the search box for the data that you want to find.

You can create search queries using a combination of reserved words and keywords or characters that describe the data collection you want to find. For example, to search for data collections that contain the letter 'A', enter `'ALL A'` in the search box. For more information about reserved words, see "Reserved words" on page 13.

When you search for data collections, consider the following guidelines:

- Enter a search term of 1000 characters or fewer.
- If you want to use a reserved word to search for a data collection, enter the reserved word in quotes. For more information about reserved words, see "Reserved words" on page 13.
- If your search query contains a special character, ensure that you enter your search query in quotes.

If you want to view the data assets or data elements that relate to one or more data collections, open the **Other Items** tab. For more information about the **Other Items** tab, see "Other Items tab" on page 9. Additionally, you can use the data assets or data elements on the **Other Items** tab to find relevant data collections. For more information, see "Related Data Collections tab" on page 11.

To clear the search box, click **Clear Search**.

Ranking of search results

When you search for data, Data Marketplace ranks your search results according to the following conditions:

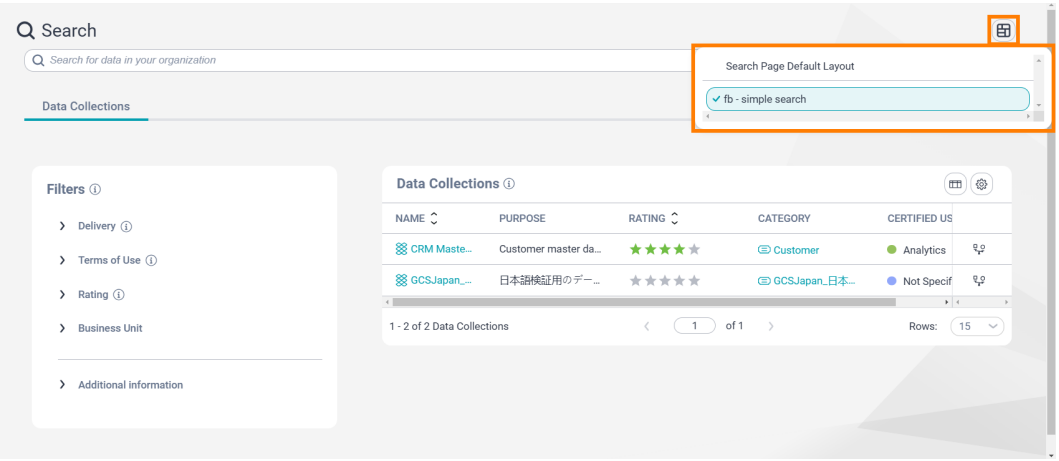

- Search term match with one or more data collection names or descriptions.

- Search term match with properties within data collections.
- Frequency with which the search term appears across data collections.
- Similarity with other terms across Data Marketplace.
- Relevant results based on other matching criteria.

Switch between page layouts

Your administrator can customize the data search experience by creating a different layout for the **Search** page. If you have multiple layout options available to you, you can use **Switch Layout** to switch between the layouts to view a different presentation of information on each layout. You can click **Set As Default** next to a particular layout to set it as your personal default.

The following image shows the **Switch Layout** icon on the **Search** page:

Data Collections tab

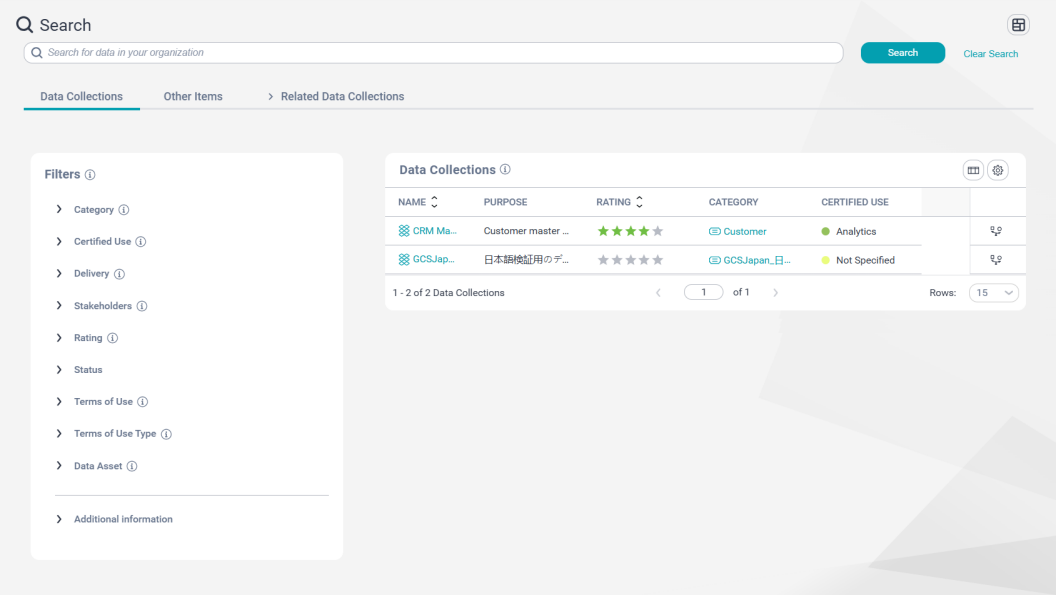

On the **Data Collections** tab of the **Search** page, you can view the data collections that are published in Data Marketplace.

Prerequisites

To search for data on this tab, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories and data collections is enabled in Metadata Command Center.

The following image shows the **Data Collections** tab listing some data collections in response to a search query:

The **Data Collections** grid displays all the data collections whose names or descriptions contain a keyword that matches your search query. When you search for data collections and their categories, consider the following guidelines:

- When you use the **Category** filter, the filter displays only effectively active categories.
- If a data collection is present in an effectively inactive category, the **Data Collections** grid won't display the data collection.
- If a data collection is added to an asset group for which you aren't assigned the required permissions, the **Data Collections** grid won't display the data collection. For more information about asset groups, see the *Implement access controls on metadata* topic in the *Set Up Data Marketplace* help.

It's possible that more than one data collection meets your requirements. In such a situation, you can compare these data collections for differences in content, usage, and available locations for consumption. To compare the data collections that you find, click **Add to Cart** to add a data collection to the **My Cart** page. For more information about how you can compare data collections, see "Compare data collections" on page 15.

Filter search results

To use the filters on this tab, ensure your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.

Alternatively, ensure that your user profile is assigned a role for which the following privileges and permissions are enabled:

- **Access Data Marketplace** privilege is enabled in Administrator.
- **Read** permission for data assets, delivery targets, terms of use and usage contexts is enabled in Metadata Command Center.

You can use one of the filters in the **Filters** panel to assist you with your search for data. For example, to include terms of use in your search from the **Terms of Use** list, select the terms of use that best describes the rules around the data usage suitable to you.

If your administrator has configured custom attributes in Metadata Command Center for the data collections in Data Marketplace, you can use the custom attributes to filter the search results. In the **Additional Information** section of the **Filters** panel, you can view the custom attribute filters that are available to you. The custom attribute filters are displayed only if in Metadata Command Center the administrator has configured them to be usable for search purposes. For more information about custom attributes, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

Note: You can use the **Status** filter only if your user profile is assigned the Data Marketplace Administrator role.

Other Items tab

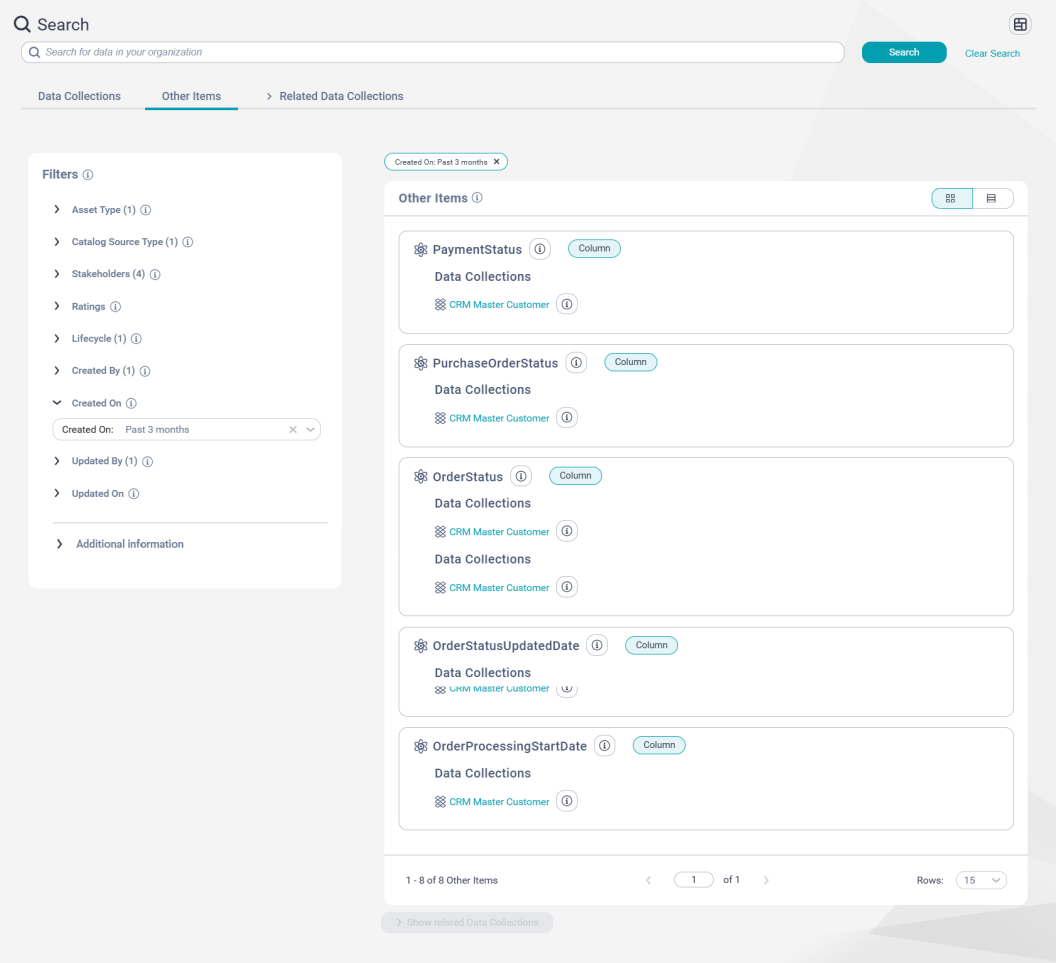

On the **Other Items** tab of the **Search** page, you can view the data assets or data elements that relate to one or more data collections.

Prerequisites

To search for data on this tab, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see *Predefined roles* in the *Introduction and Getting Started* help.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories, data assets, data collections and data elements is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets and technical assets is enabled in Metadata Command Center.

The following image shows the **Other Items** tab on the **Search** page listing a data asset and some data elements in response to a search query:

The **Other Items** grid displays all the data elements or data assets whose names or descriptions contain a keyword that matches your search query. To view more information about the data collection that is associated with a data element or a data asset, click the data collection to open its details page.

Note: If you aren't assigned the required permissions for an asset group to which a data collected is added, you can't view the associated data asset and the data elements in the **Other Items** grid. For more information about asset groups, see *Implement access controls on metadata* in the *Set Up Data Marketplace* help.

If a data asset or data element is associated with fewer than three data collections, you can use **Compare All** to compare the data collections for differences in content, usage, and available locations for consumption. For more information about how you can compare data collections, see "Compare data collections" on page 15.

To review all the data collections that contain the listed data assets or data elements, click **Show related data collections**. This button is clickable only when you have a maximum of 25 data assets or data elements available on this tab. To reduce the number of data assets or data elements that are displayed on this tab, use the filters in the **Filters** panel.

If you disabled the **Advanced Search** option on the **Setup** > **Configuration** tab, Data Marketplace won't display the **Other Items** tab on the **Search** page, and will run your search query on only the names or descriptions of data collections. For more information about how you can configure advanced search, see *Advanced Search* in the *Set Up Data Marketplace* help.

Filter search results

You can use one of the filters in the **Filters** panel to assist you with your search for data. For example, to view only the data assets that are created in Data Marketplace, select the **Native Data Asset** option in the **Asset Type** filter.

For an asset that was imported from Data Governance and Catalog into Data Marketplace, you can use its custom attributes to filter the search results. In the **Additional Information** section of the **Filters** panel, you can view the custom attribute filters that are available to you. The custom attribute filters are displayed only if in Metadata Command Center the administrator has configured them to be usable for search purposes. For more information about custom attributes, see *Asset customization* in the *Administration* help for Metadata Command Center.

Changing the search result layout

You can use the layout buttons to change the layout of the **Other Items** grid. You can select either a **Table** layout or a **Card** layout for the **Other Items** grid. The **Card** layout is selected by default.

Related Data Collections tab

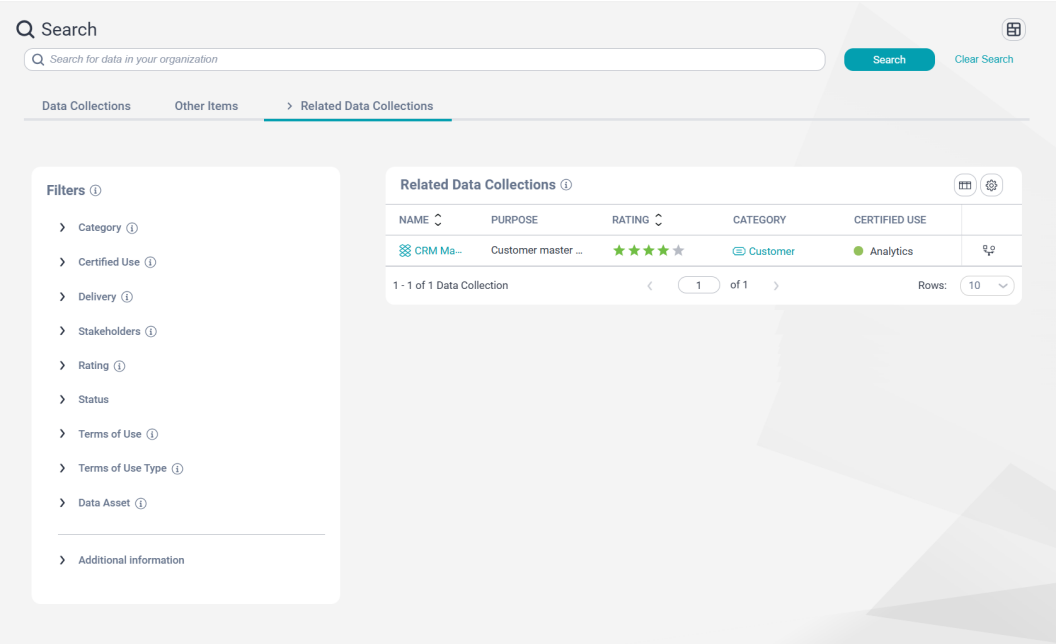

When you click **Show related data collections** on the **Other Items** tab, the **Related Data Collections** tab opens. On the **Related Data Collections** tab, you can view the data collections that are associated with the data assets or data elements on the **Other Items** tab.

Prerequisites

To search for data on this tab, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories and data collections is enabled in Metadata Command Center.

The following image shows the **Related Data Collections** tab on the **Search** page:

If none of the data collections meet your requirements, you can update the item selection on the **Other Items** tab to get a new set of data collections that you can assess for your business needs. When updating the item selection on the **Other Items** tab, ensure that you click **Show related data collections** again to refresh results in this tab.

Note: If you aren't assigned the required permissions for an asset group to which a data collected is added, you can't view the data collection in the **Related Data Collections** grid. For more information about asset groups, see *Implement access controls on metadata* in the *Set Up Data Marketplace* help.

It's possible that more than one data collection meets your requirements. In such a situation, you can compare these data collections for differences in content, usage, and available locations for consumption. To compare the data collections that you find, click the **Add to Cart** icon to add a data collection to the **My Cart** page. For more information about how you can compare data collections, see "Compare data collections" on page 15.

Filter search results

To use the filters on this tab, ensure your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.

Alternatively, ensure that your user profile is assigned a role for which the following privileges and permissions are enabled:

- **Access Data Marketplace** privilege is enabled in Administrator.
- **Read** permission for data assets, delivery targets, terms of use and usage contexts is enabled in Metadata Command Center.

You can use one of the filters in the **Filters** panel to assist you with your search for data. For example, to include terms of use in your search from the **Terms of Use** list, select the terms of use that best describes the rules around the data usage suitable to you.

Note: You can use the **Filters** panel only if the **Related Data Collections** tab displays fewer than 200 results.

If your administrator has configured custom attributes in Metadata Command Center for the data collections in Data Marketplace, you can use the custom attributes to filter the search results. In the **Additional**

Information section of the **Filters** panel, you can view the custom attribute filters that are available to you. The custom attribute filters are displayed only if in Metadata Command Center the administrator has configured them to be usable for search purposes. For more information about custom attributes, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

Note: You can use the **Status** filter only if your user profile is assigned the Data Marketplace Administrator role.

Reserved words

Reserved words are words that are reserved for specific functions in Data Marketplace.

Data Marketplace reserves the following words:

- `ALL`
- `ARE`
- `TYPE`
- `AND`
- `ANY`
- `AS`
- `CONTAINING`
- `DAY`
- `DAYS`
- `EQUALS`
- `GREATER`
- `HOUR`
- `HOURS`
- `HAS`
- `IN`
- `INBOUND`
- `IS`
- `LAST`
- `LESS`
- `BETWEEN`
- `MATCHING`
- `NOT`
- `NULL`
- `OR`
- `OUTBOUND`
- `RELATED`
- `TRAVERSE`
- `REPEAT`
- `UNTIL`

- HOPS
- UNBOUNDED
- RELATIONSHIPS
- ROLE
- THAN
- THROUGH
- TO
- WHERE
- WHICH
- WITH
- WITHIN
- WITHOUT
- HAVING
- STAKEHOLDER

Note: If you want to use a reserved word to search for a data collection, enter the reserved word in quotes.

Explore data collections in your cart

The **My Cart** page is a centralized location in Data Marketplace where you can add data collections to compare and order the data collections that are of interest to you.

Add data collections to your cart

To add a data collection to your cart, use **Add to Cart** on a data collection grid from the **Browse** and the **Search** pages, or from within a data collection. You can add up to 10 data collections to your cart.

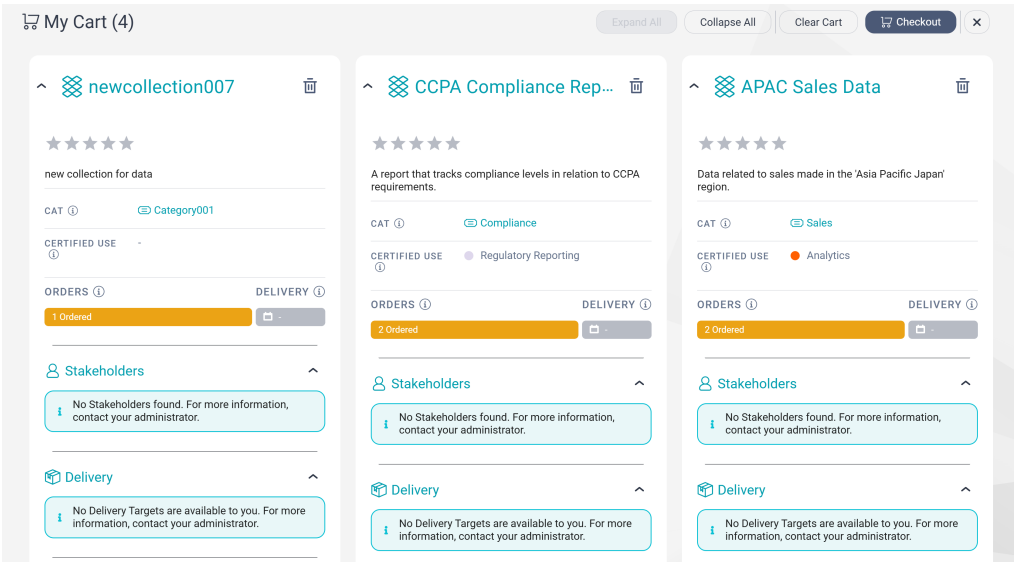

If you can't find a data collection that meets your requirements, you might request the creation of a new data collection. For more information about how you can submit a request for a new data collection, see “Requesting new data collections” on page 28.

Compare and check out data collections

On the **My Cart** page, you can compare data collections that you have added to your cart and check out multiple data collections simultaneously.

When comparing the data collections in your cart, you can collapse and expand collection details to better understand and identify the collections that meet your requirements. If you want to remove a data collection, click **Remove** or click **Clear Cart** to empty your cart. After you have determined the data collections you need, click **Checkout** to proceed to the **My Cart Checkout** page. On the checkout page, there are multiple rows where you can provide order information to data collection stakeholders for the items that you want to order. For more information about the information you can provide in an order, see “Ordering a data collection” on page 18.

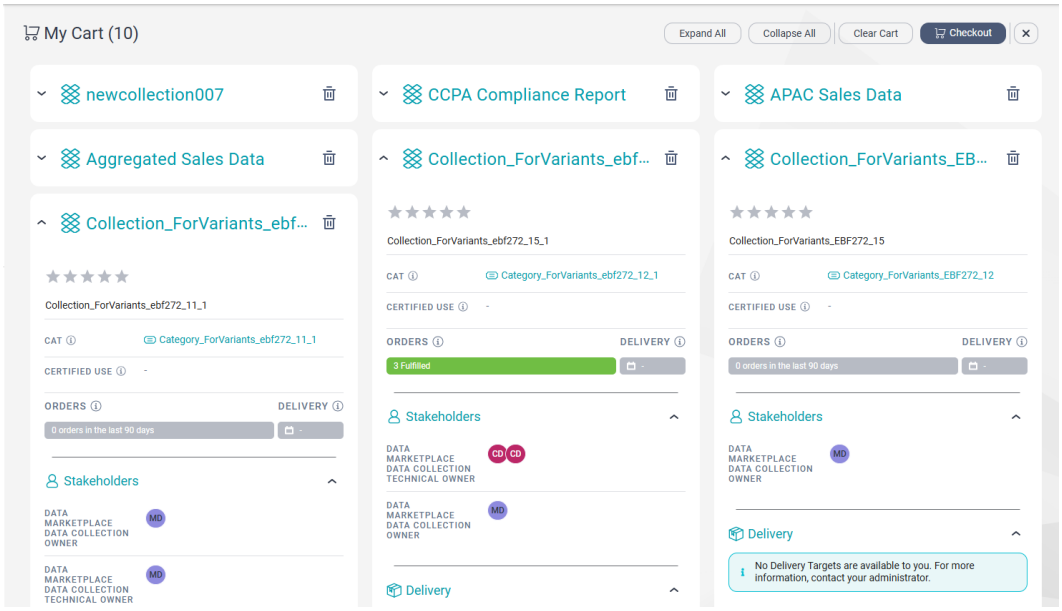

The following image shows data collections on the **My Cart** page:

Compare data collections

On the **My Cart** page, you can compare data collections to determine the collection that best suits your needs.

The following image shows data collections on the **My Cart** page:

How do I use My Cart to compare data collections?

To compare data collections in **My Cart**, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.

- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories, data assets, data collections, delivery targets, terms of use and usage contexts is enabled in Metadata Command Center.

Use **Add to Cart** to add a data collection to the **My Cart** page. You can compare data collections based on stakeholdership, categorization, certified use, and delivery options. You can also use statistics around recent orders and average delivery time to compare data collections, and also compare the data assets that the data collections contain. If your Administrator has configured custom attributes in Metadata Command Center for data collections in Data Marketplace, you can view additional fields in the **Additional Information** section and use these fields as another point of comparison.

Note: As a Data User, you can't add an unpublished data collection to the **My Cart** page. As a stakeholder, you can add an unpublished data collection to the **My Cart** page only if you are responsible for the unpublished data collection.

As a Data User, how does the compare feature benefit me?

As a Data User, when more than one data collection seems to meet your requirements, you can add multiple data collections to your cart and compare them using **My Cart**'s compare feature. On the **My Cart** page, you can view helpful information about the data collections that you have added, such as certified use, delivery options, and stakeholders. The information can help you home in on the data collections that meet your requirements.

After you have identified the data collections you want to order, you can proceed to the checkout wizard from the **My Cart** page to simultaneously order all the data collections in your cart.

As a stakeholder, how does the compare feature benefit me?

As a stakeholder of a data collection, you can use the compare capability in **My Cart** to evaluate how your data collections relate to other data collections in Data Marketplace. If you discover overlaps between data collections, you can link the data collection to your own data collection. This improves the data discovery experience for Data Users. For more information about how you can link similar data collections, see "Linking data collections" on page 54.

Order data collections

You can order a single data collection or order multiple data collections simultaneously.

Prerequisites for ordering a data collection

To order a data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Create** and **Read** permissions for orders are enabled in Metadata Command Center.
  - **Read** permission for cost centers, data collections, delivery targets, terms of use and usage contexts is enabled in Metadata Command Center.

Note: Your administrator might tailor the data ordering experience according to the needs of your organization by creating a different layout for the wizard. If you have multiple layout options available to you, you can use the **Switch Layout** icon to switch between the layouts to view a different presentation

of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

Order data collections

Depending on your requirements, you can check out a single data collection or add and check out multiple data collections from your cart. Checking out collections takes you to the checkout wizard, which leads you through a step-by-step process.

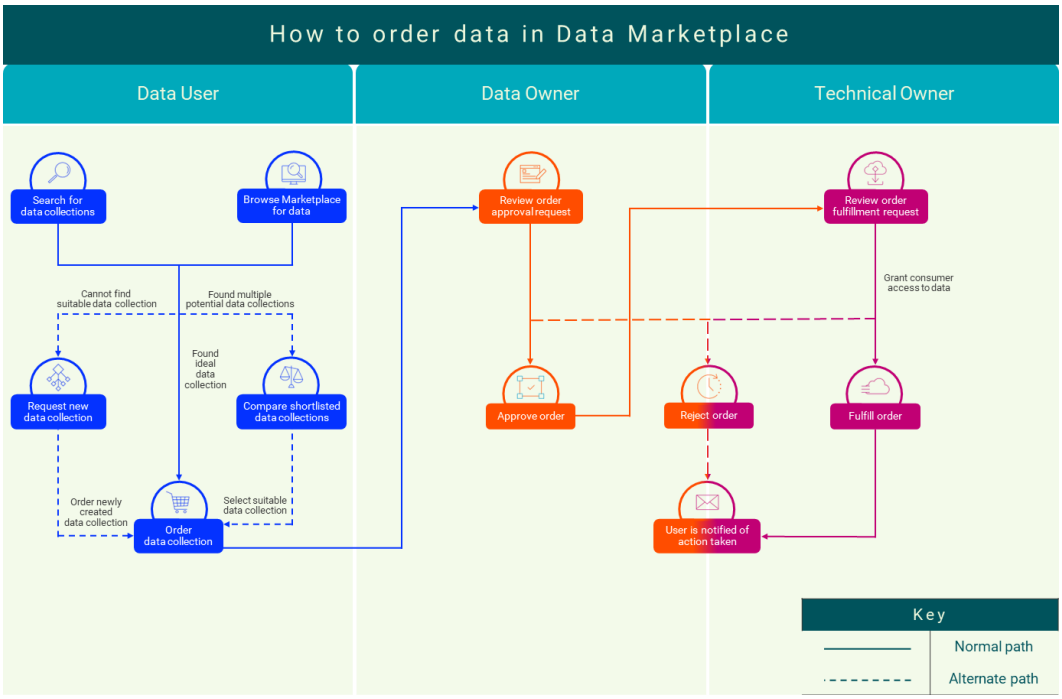

Navigate the checkout wizard

When you check out one or more data collections, the **Request Details** stage of the check out wizard opens. Here, you can provide various details related to your order. The details include information such as the intended use of the data, the business justification for ordering the data, and where you would like to use the data. Enter values for all required fields to proceed to the **Usage Guide** stage of the wizard.

The **Usage Guide** stage provides the general terms of use for data collections in Data Marketplace, and terms of use that are specific to the data collections you are ordering. You must review the terms of use for all data collections. Some data collections might require explicit agreements to place your orders.

After submitting your orders, you are taken to the **Orders Placed** stage where you can see if your orders were placed successfully. You can review the status of the different orders. Successful orders show timeline, summary, and delivery details of the data collection for which you have requested access. You can also view if any orders have failed. These orders are resent to your cart so you can retry ordering for them.

The following image shows the overall process of ordering a data collection in Data Marketplace:

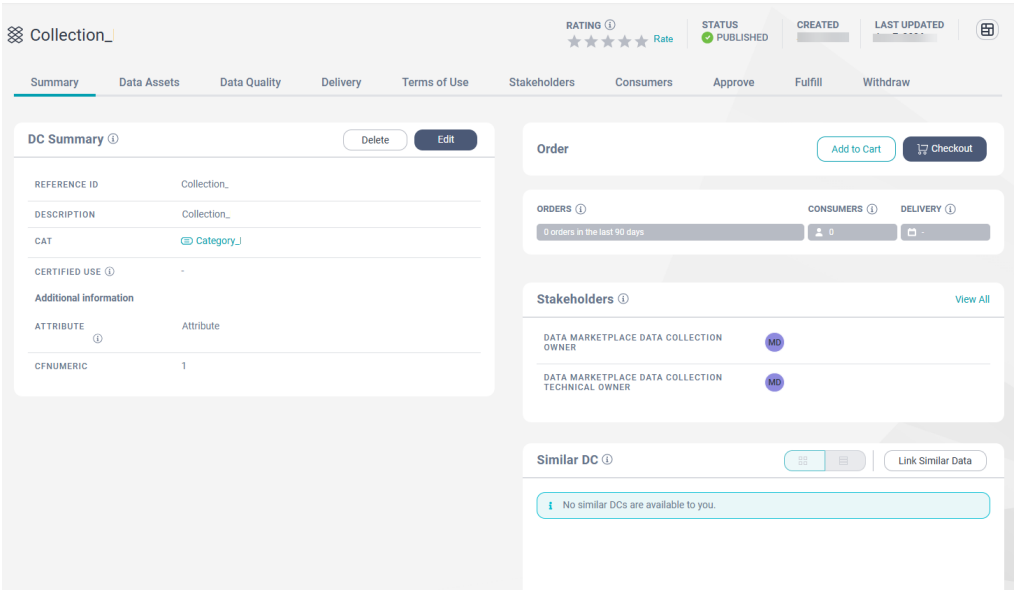

Note: The process flow is illustrated using the predefined roles for Data Marketplace.

Ordering a data collection

After you find a data collection that meets your requirements, you can place an order to gain access to the data collection.

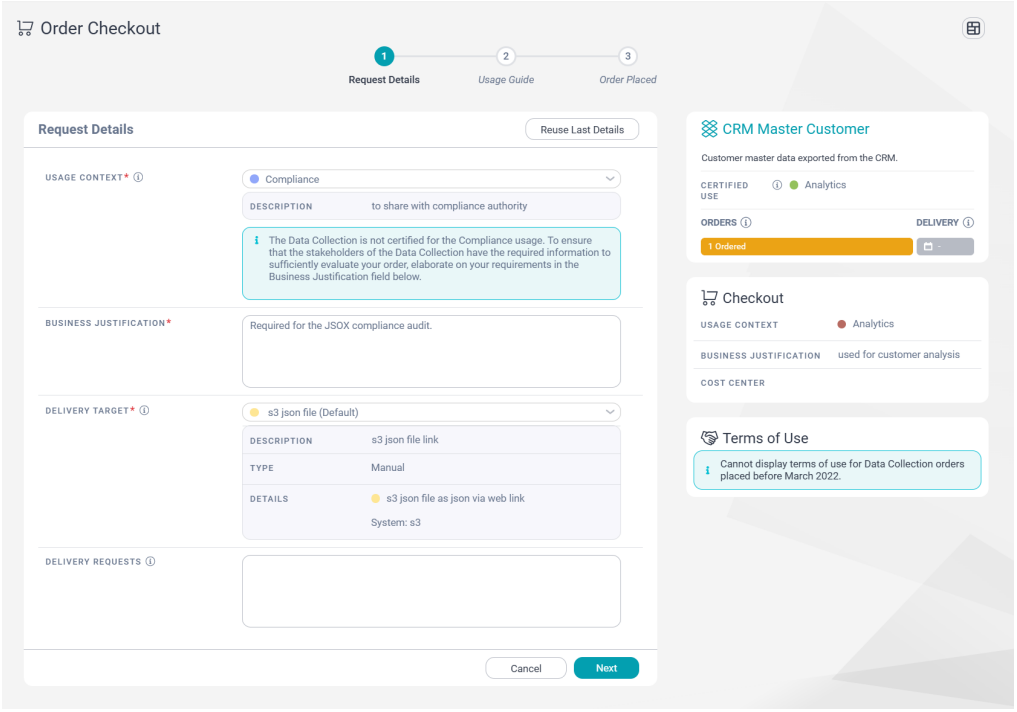

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
   A data collection page appears.

2. On the data collection page, click **Checkout** in the **Order** section.

   The **Order Checkout** wizard appears.

3. On the **Request Details** stage, enter the order details.

   Alternatively, you can also reuse the information from your previous order or from the last data collection in your previous **My Cart** checkout. To do this, click **Reuse Last Details**. If you order the same data collection that you previously ordered, all the fields are automatically populated. If your previous order was for a different data collection, **Delivery Target** is left empty.
   The following table describes the fields that you can configure on the **Request Details** stage:

Field	Description
Usage Context	Select the option that describes how you intend to use the data after you receive access to the collection. If none of the listed options accurately describe how you intend to use the data, select the option that bears the most resemblance to your usage.
Business Justification	Enter a brief description of how you intend to use the data after you receive access to the collection. A stakeholder of the data collection might read this description to decide whether to approve your order.
Delivery Target	**Note:** If no delivery targets are configured for the data collection, this field is hidden. Select a delivery target for the data collection. If a default delivery target is configured for the data collection, that delivery target is selected by default which you can configure. If no delivery targets are configured for the data collection, this field is hidden. If you select a delivery target for which the **Managed Access** option is enabled, a stakeholder might be more likely to approve your order. With managed access, the data will be delivered in a location that is accessible only to you. Additionally, the delivered data might get customized based on the characteristics of the data and the usage context that you specify in the **Usage Context** field. For more information, see the *Manage access to data with Data Access Management* topic in the *Set Up Data Marketplace* help.
Delivery Requests	Enter any additional information that pertains to your order. For example, you can specify the urgency or the preferred delivery method in this field.
Cost Center	**Note:** This field is visible to you only if it is configured on the **Configuration** tab of the **Setup** page. For more information, see *Cost centers* in *Set Up Data Marketplace*. Select your cost center. If the listed options don't list your cost center, you can enter your cost center. If required, a stakeholder of the data collection can select an alternate cost center value when they approve or fulfill the order.

   Note: If your administrator has configured custom attributes in Metadata Command Center for orders in Data Marketplace, the **Request Details** stage will display additional fields. You can use these fields to specify additional information about the order. For more information, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

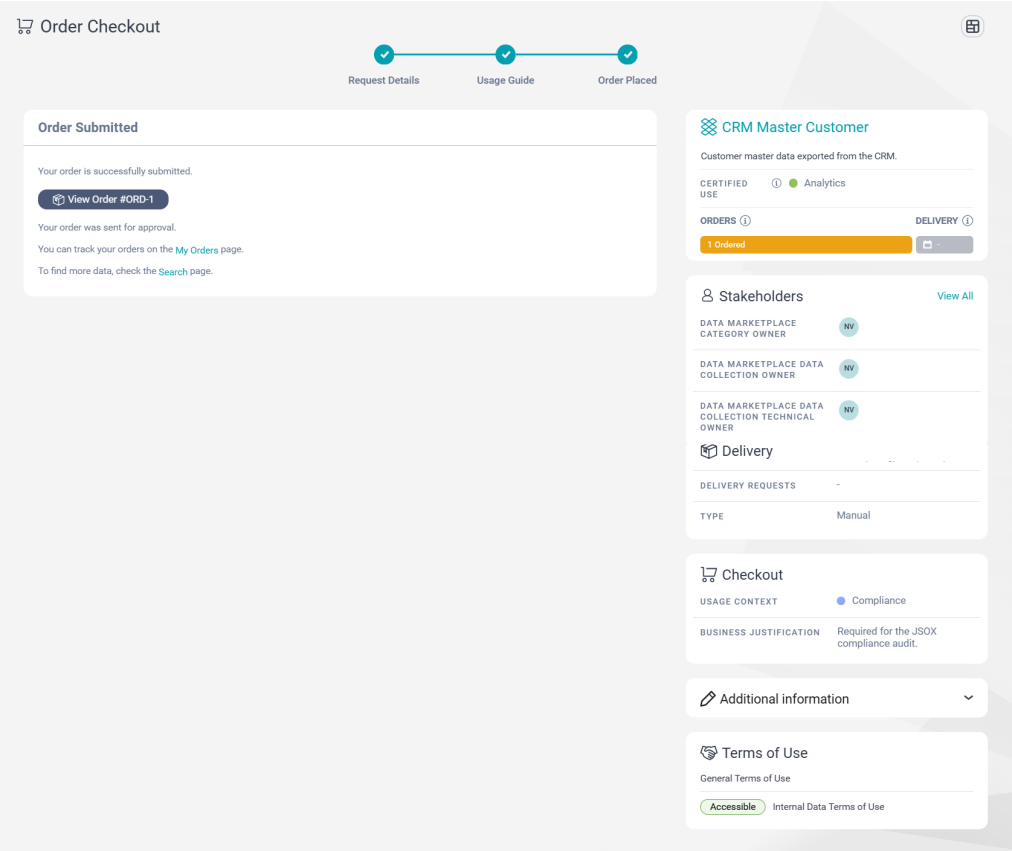

4. Click **Next**.

The **Usage Guide** stage appears.

5. On the **Usage Guide** stage, review the terms of use.
6. Click **Submit Order**.

The wizard moves to the **Order Placed** stage.

Note:

- If a data collection contains a terms of use with a check box, select the check box to accept the terms of use. If you don't select the check box, **Submit Order** remains disabled.
- If the stakeholders didn't specify the **General Terms Of Use** for the data collection, **Submit Order**remains disabled.

7. On the **Order Placed** stage, you can view the details of the order that you placed.

   If you want to navigate to the order page, click **View Order**. On the order page, you can view the timeline, summary, and delivery details of the data collection for which you have requested access.

After you place an order, Data Marketplace notifies the stakeholders of the data collection about the order. For more information about how a stakeholder responds to an order, see Responding to orders.

Note: Data Marketplace notifies only users that are specifically assigned as stakeholders on the ordered data collection and have the **Approve or Reject Orders** privilege enabled for their user role in Administrator.

If your order is fulfilled, you can navigate to the consumer access page by clicking the consumer access link on the order page. For more information about consumer access, see Consumer accesses.

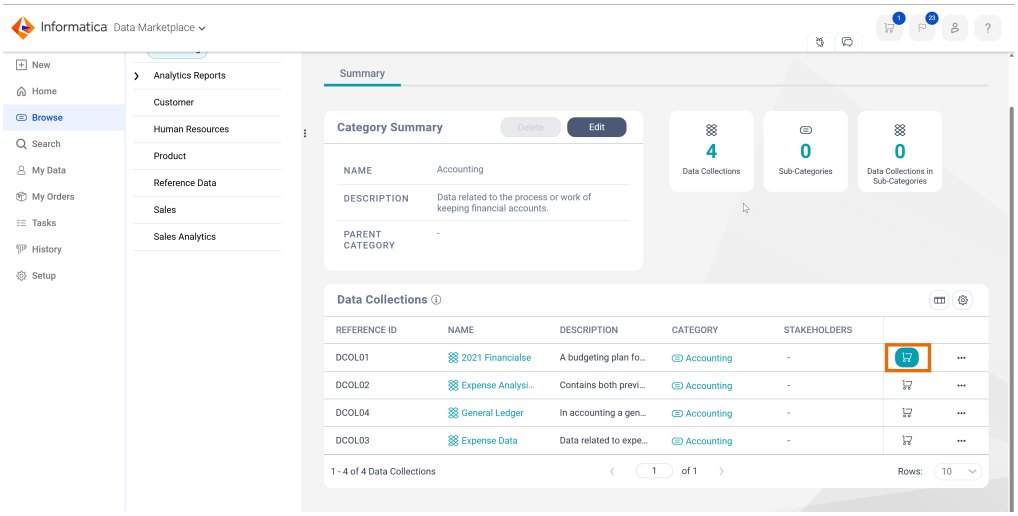

Ordering multiple data collections

If multiple collections meet your business requirement, you can add the data collections to your cart and order them all at once.

1. On a data collection page, click the **Add to Cart** to add the data collection to your cart.

   Alternatively, on the **Search** and the **Browse** pages, click the **Cart** icon to add a data collection to your cart. You can add up to 10 data collections to your cart.

   A data collection is added to your cart.

   For more information about how you can find a data collection, see Browsing for data collections.

2. On the Data Marketplace header, click **My Cart** to view your cart.

   The **My Cart** page appears.

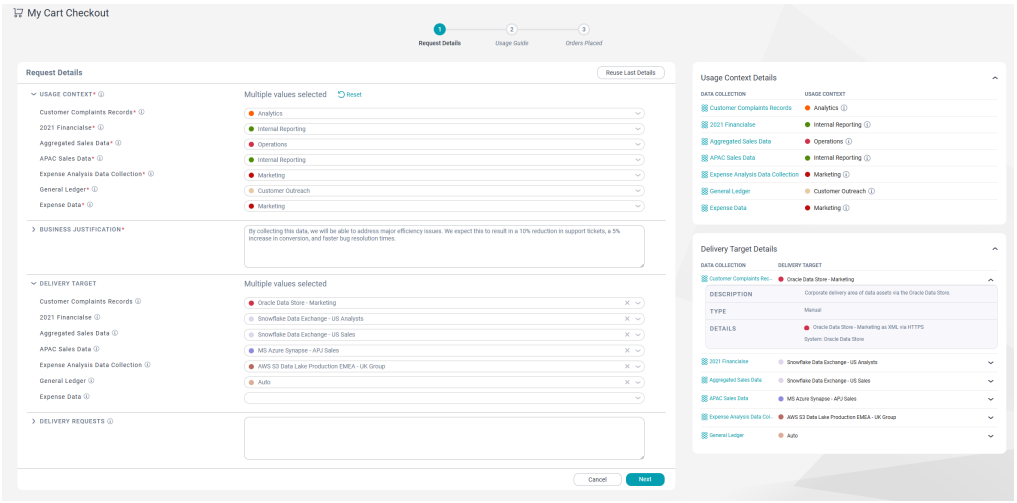

3. On the **My Cart** page, compare and view the data collections that you have added to your cart.

   For more information about comparing data collections, see "Compare data collections" on page 15

4. After you have finalized on the data collections you want to order, click **Checkout**.

The **My Cart Checkout** wizard appears.

5. On the **Request Details** stage, enter the order details.

   Alternatively, you can also reuse the information from the final data collection in your previous cart checkout or from a previous data collection order. To do this, click **Reuse Last Details**. If you order the same data collection that you previously ordered, all the fields are automatically populated. If your previous order was for a different data collection, **Delivery Target** is left empty.
   The following table describes the fields that you can configure on the **Request Details** grid:

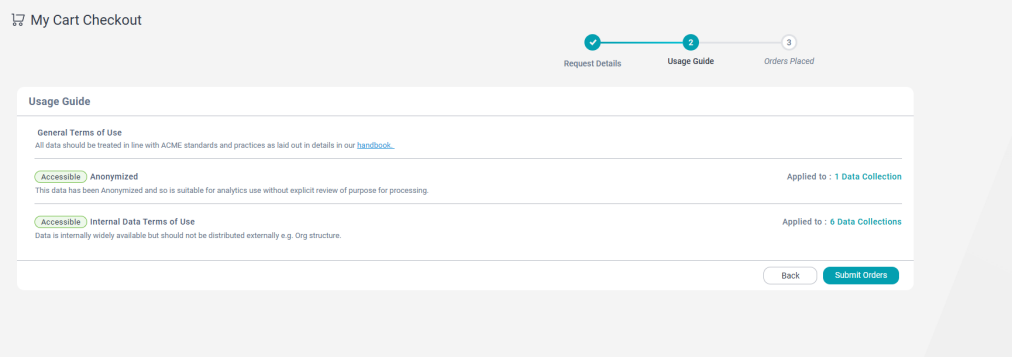

Field	Description
Usage Context	Select the option that describes how you intend to use the data after you receive access to the collection. Select an option that applies to all the data collections in your cart, or expand this field to select a unique value for each data collection. If none of the listed options accurately describe how you intend to use the data, select an option that bears the most resemblance to your usage.
Business Justification	Enter a brief description of how you intend to use the data after you receive access to the collection. Enter a description that applies to all the data collections in your cart, or expand this field to enter a unique description for each data collection. A stakeholder of the data collection might read this description to decide whether the orders for the data assets are valid.
Delivery Target	**Note:** If no delivery targets are configured for the data collection, this field is hidden. Select a delivery target for the data collections. Expand this field to select a unique value for each data collection. If a default delivery target is configured for the data collections, that delivery target is selected by default which you can configure. If you select a delivery target for which the **Managed Access** option is enabled, a stakeholder might be more likely to approve your order. With managed access, the data will be delivered in a location that is accessible only to you. Additionally, the delivered data might get customized based on the characteristics of the data and the usage context that you specify in the **Usage Context** field. For more information, see the *Manage access to data with Data Access Management* topic in the *Set Up Data Marketplace* help.

Field	Description
Delivery Requests	Enter any additional information that pertains to your requests. For example, you can specify the urgency or the preferred delivery method in this field. Enter a description that applies to all the data collections in your cart, or expand this field to select a unique description for each data collection.
Cost Center	**Note:** This field is visible to you only if it is configured on the **Configuration** tab of the **Setup** page. For more information, see *Cost centers* in *Set Up Data Marketplace*. Select your cost center. Select an option that applies to all the data collections in your cart, or expand this field to select a unique value for each data collection. If the listed options don't list your cost center, you can enter your cost center. If required, a stakeholder of the data collection can select an alternate cost center value when they approve or fulfill the orders.

Note: If your administrator has configured custom attributes in Metadata Command Center for orders in Data Marketplace, the **Request Details** stage will display additional fields. You can use these fields to specify additional information about the order. For more information, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

6. Click **Next**.

   The **Usage Guide** stage appears.

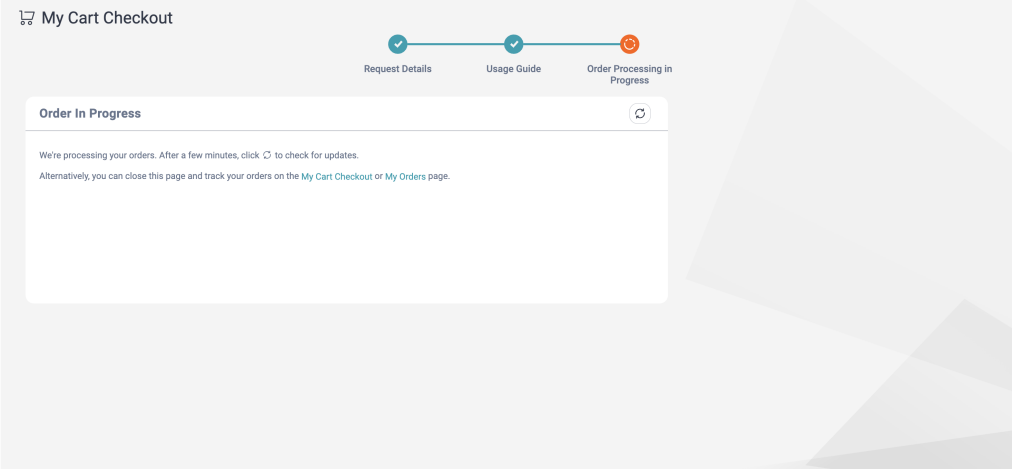

7. On the **Usage Guide** stage, review the terms of use.
8. Click **Submit Orders** to place your data collection orders.

   Note:

   - If a data collection contains a terms of use with a check box, select the check box to accept the terms of use. If you don't select the check box, **Submit Order** remains disabled.
   - If the stakeholders didn't specify the **General Terms Of Use** for the data collection, **Submit Order**remains disabled.

The wizard moves to the **Orders Placed** stage.

9. On the **Orders Placed** stage, you can view the details of the orders that you placed.

   If you want to navigate to the order page, click **View Orders**. On the order page, you can view the timeline, summary, and delivery details of the data collection for which you have requested access.

After you place your orders, Data Marketplace notifies the stakeholders of the data collection about the orders. For more information about how a stakeholder responds to an order, see "Responding to orders" on page 62.

Note: Data Marketplace notifies only users that are specifically assigned as stakeholders on the ordered data collections and have the **Approve or Reject Orders** privilege enabled for their user role in Administrator.

If your orders are fulfilled, you can navigate to the consumer access page by clicking the consumer access link on the order page. For more information about consumer access, see "Consumer accesses" on page 68.

Rating data collections

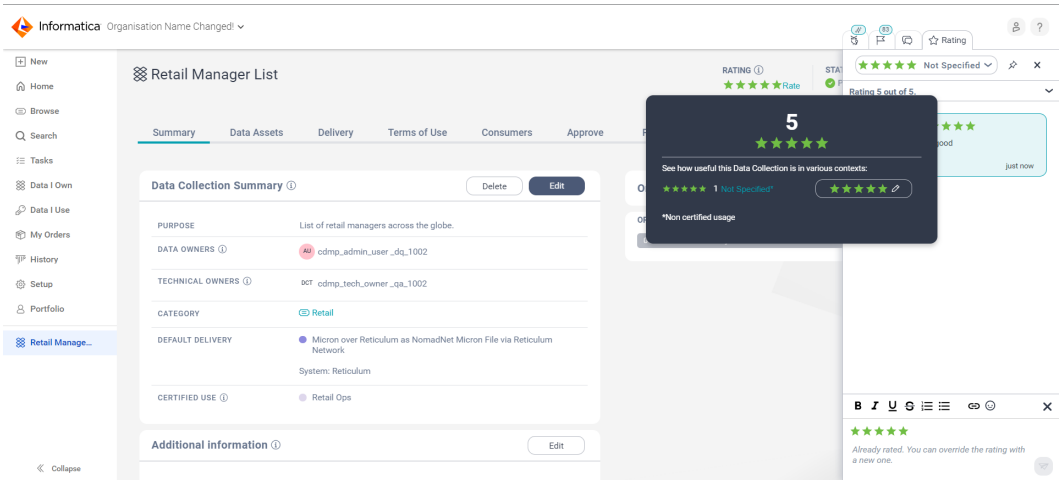

A data collection rating is the average of each Data User's assessment of the data collection, it helps potential consumers to gauge the usefulness of a data collection. It also helps stakeholders to understand how useful their collection is to the Data Users. You can rate the data collections to which you have received access, and you can also rate the data collections that you manage.

To rate a data collection, verify one of the following prerequisites:

- You have received access to the data collection and your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner

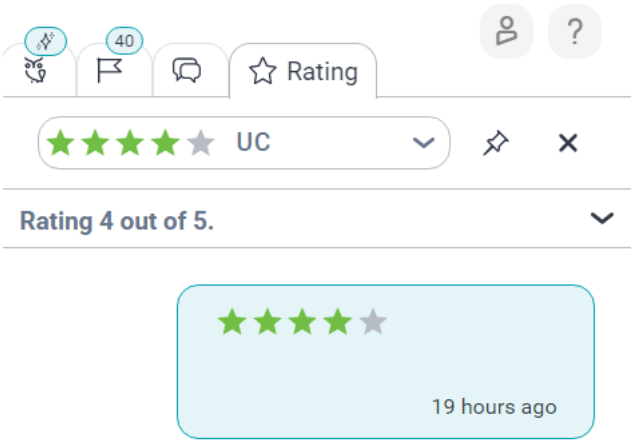

- You have received access to the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data collections and usage contexts is enabled in Metadata Command Center.
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data collections is enabled in Metadata Command Center.

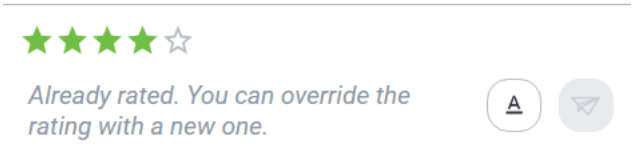

The following image shows the rating tooltip of a data collection:

To rate a data collection, click **Rating**. When you rate a collection, you can also enter your comments to express your experience with the data collection. To access the advanced text formatting options or to add emoticons, click **Format Text**. In the **Rating** panel, you can also view how other consumers of the data collection have rated it and the comments that they provided when they rated the collection.

The following image shows the **Rating** panel on a data collection:

As a Data User, you can rate a data collection that you have access to for the specific usage that you ordered it for or in a general sense. You can also rate a collection as a Data Owner in a general sense. To rate a collection in a generic sense, select the **Not Specified** option from the list at the top of the **Rating** panel.

In the **Rating** panel, you can view the avatars of the other Data Users that have rated the data collection. You can also see how they have rated it.

Requesting new data collections

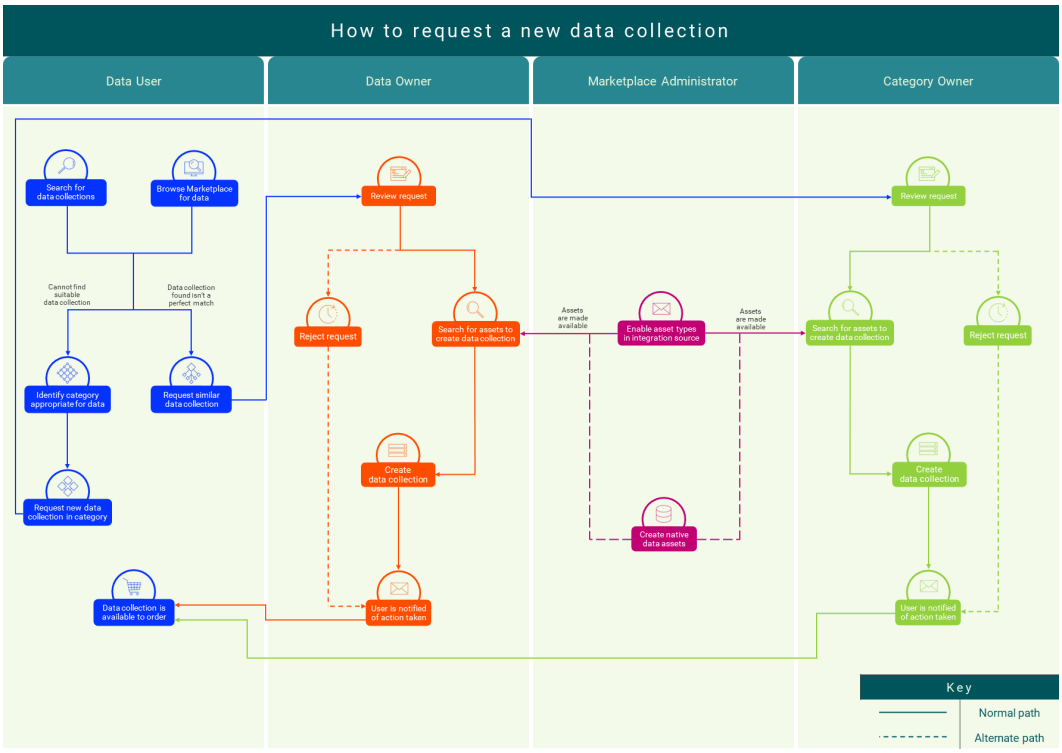

If you can't find a data collection that meets your business requirement, you can request the creation of a new data collection from a category page or from a data collection page.

To request a new data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Create** and **Read** permissions for data collection requests are enabled in Metadata Command Center.
  - **Read** permission for categories or data collections is enabled in Metadata Command Center.
  - **Read** permission for cost centers and usage contexts is enabled in Metadata Command Center.

Note: Your administrator might customize the experience for requesting new data collections by creating a different layout for the wizard. If you have multiple layout options available to you, you can use the **Switch Layout** icon to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

The following image shows the overall process of requesting the creation of a new data collection in Data Marketplace:

Note: The process flow is illustrated using the predefined roles for Data Marketplace.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.

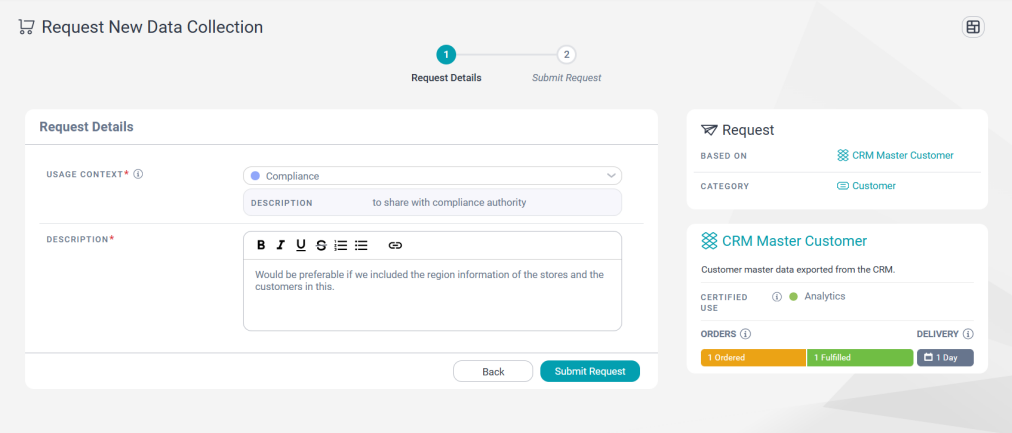

2. On the **Summary** tab of the data collection page, click **Request New Data Collection** under the **Variants** section.

   You can also use **Request New Data Collection** on the **Data Collections** tab of the category page to submit a data collection request.

3. On the **Request Details** section, you can enter the details of your request.

   The following table describes the fields in the **Request Details** section:

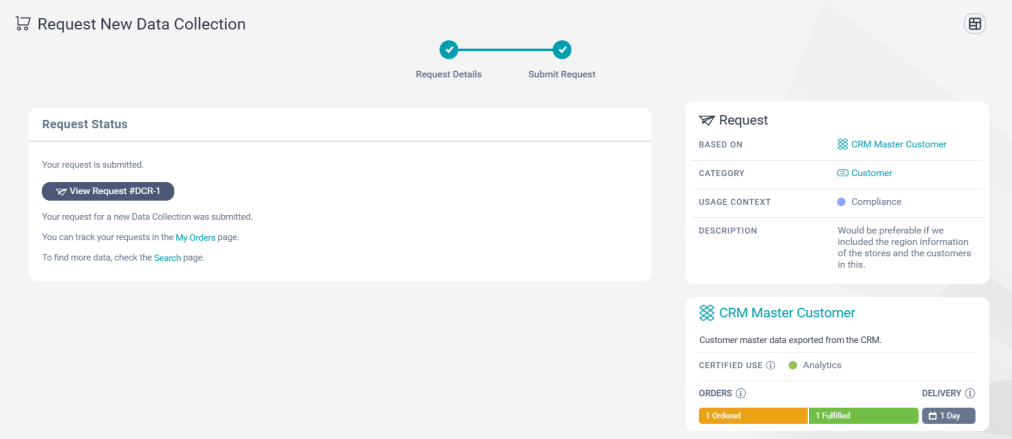

Field	Description
Usage Context	Select the context within which you plan to use the data.
Description	Enter your requirements for the new data collection.
Cost Center	Select your cost center. If you are not aware of your cost center or if the listed options don't list your cost center, you can enter your cost center. A stakeholder of the category or data collection can select an alternate cost center value when they review your request. **Note:** This field is visible to you only if it is configured on the **Configuration** tab of the **Setup** page. For more information, see the *Cost centers* topic in the *Set Up Data Marketplace* help.

On the **Data Collection Request Summary** section, you can view the details of the category where the requested data collection will appear if it is created. You can also view the details of the data collection from which you submitted the new data collection request.

Note: If you submit a request for a new data collection from the category page, only the **Requested Category** sub-section appears.

4. Click **Submit Request**.

After you submit a data collection request, Data Marketplace notifies the stakeholders of the category or data collection about the request. For more information about how a stakeholder responds to a data collection request, see "Responding to data collection requests" on page 37.

Note: Data Marketplace notifies only users that are specifically assigned as stakeholders on the category or data collection and have the **Complete or Reject Data Collection Requests** privilege enabled for their user role in Administrator.

On the **My Orders** page, you can view the data collection requests that you have submitted. For more information about how you can view the data collection requests that you have submitted, see "View your orders and data collection requests" on page 30.

View your orders and data collection requests

On the **My Orders** page, you can view the details of the data collections that you have ordered and of the new data collections that you requested.

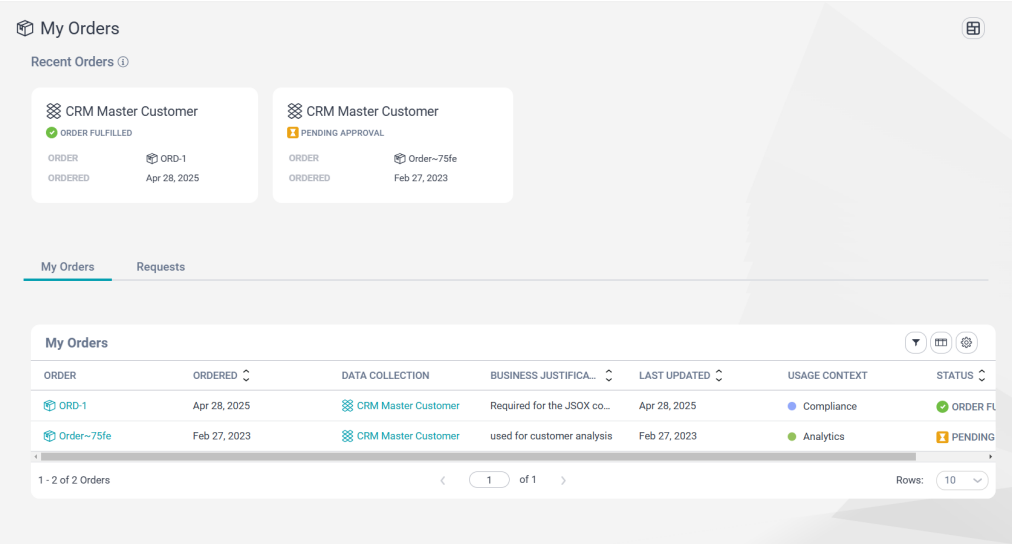

To view this page, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories, data collections, data collection requests, orders and usage contexts is enabled in Metadata Command Center.

Note: Your administrator might customize the **My Orders** page by creating a different layout for the page. If you have multiple page layout options available to you, you can use the **Switch Layout** icon to switch between

the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

1. Open the **My Orders** page.

2. On the **My Orders** tab, you can view the orders that you placed.

   The following table describes the fields in the **Orders** grid:

Field	Description
Order	Reference identifier of the order.
Ordered	Date when you ordered the data collection
Data Collection	Name of the ordered data collection.
Business Justification	The reason for the requirement of access to the data provided by you at the time of order.
Last Updated	Latest date when the order was modified.
Status	Status of the order. An order can have one of the following statuses: - **Pending Approval**. The order is pending for approval with a stakeholder of the ordered data collection. - **Access Rejected**. The order was rejected by a stakeholder of the ordered data collection. - **Fulfillment Stage**. The order is approved for fulfillment. A stakeholder of the ordered data collection delivers the data to you. - **Order Fulfilled**. The ordered data was delivered to you. - **Order Cancelled**. The order was cancelled.

   To filter the orders that are displayed in the **Orders** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the orders that are fulfilled, click **Filter** and select the **Status** filter. In the **Status** filter, select the `Order Fulfilled` status and click **Filter** again to apply it. After you apply the filter, the **Orders** grid displays only the orders that are fulfilled.

3. To view the details of an order, click an order ID in the **Order** column.

Depending on the status of the order, you can take the following actions:

- If your order is pending approval, click **Cancel Order** to cancel the order.
- If your order is rejected, you can place the order again.

4. On the **Requests** tab, you can view the data collections requests that you submitted.

The following table describes the fields in the **Requests** grid:

Field	Description
Request	Reference identifier of the data collection request.
Requested	Date when you submitted the request for a new data collection.
Data Collection	Name of the data collection that is the basis of the new data collection.
Business Justification	The reason for the requirement of a new data collection as provided by you at the time of request.
Category	Name of the category in which the new data collection is requested.
Last Updated	Latest date when the data collection request was modified.
Status	Status of the data collection request. A data collection request can have one of the following statuses: - **Pending Completion**. A request for a new data collection is submitted. - **Request Completed**. A new data collection was created in response to the request. - **Request Rejected**. The request was rejected by a stakeholder of the category or data collection. - **Request Cancelled**. The data collection request was cancelled.

To filter the data collection requests that are displayed in the **Requests** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the data collection requests that are pending completion, click **Filter** and select the **Status** filter. In the **Status** filter, select the `Pending Completion` status and click **Filter** again to apply it. After you apply the filter, the **Requests** grid displays only the data collection requests that are pending completion.

5. To view the details of a data collection request, click the request ID in the **Request** column.

CHAPTER 2

Manage data collections

A data collection consists of related data assets that are similar, related to each other, or belong together. As a stakeholder, you create and manage data collections.

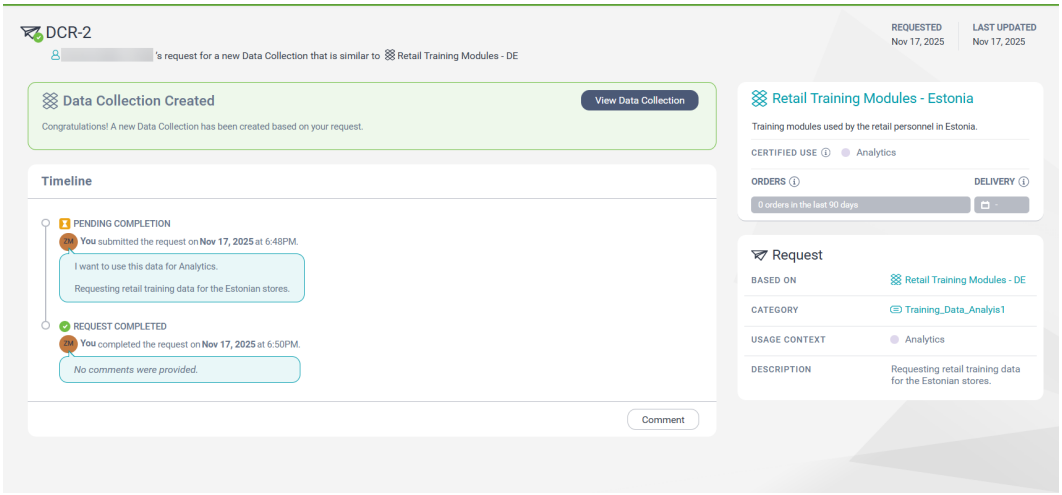

As your needs evolve, you can modify the data collection, its stakeholders, and its delivery targets change. Data Users can place orders for data collections that you publish if the collection meets their business requirement. If no collection meets their requirements, Data Users can submit requests for new data collections. You can review or reject the requests.

You can view past orders and requests on the **History** page. You can also link similar data collections to help Data Users discover similar collections.

View data collection request details

On a data collection request page, you can view details of your data collection request.

The following image shows a data collection request summary page:

Prerequisites

To view a data collection request, verify one of the following prerequisites:

- The data collection request was created by you and your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.

- Your user profile is assigned the Data Marketplace Administrator role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the category or data collection from which the Data User submitted the data collection request:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the relevant category or data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Complete or Reject Data Collection Requests** privileges are enabled in Administrator.
  - **Read** permission for categories, data collection, data collection requests and usage contexts is enabled in Metadata Command Center.

Timeline section

In the **Timeline** section, you can view a summary of the actions and comments on the data collection request, along with the timestamp of each action or comment.

Note: You can't tag users in your comments, if you did not request for the data collection or you are not a stakeholder with the permissions to view data collection request details.

Consumer information section

The following table describes the fields that you can view in the consumer information section:

Field	Description
Requested	Date when the Data User submitted the request.
Last Updated	Latest date when the data collection request was modified.

Data collection section

In the data collection section, you can view the details of the data collection that was created in response to the request. To view more details of the data collection that is created, hover your pointer over the data collection details section.

Request section

The following table describes the fields that you can view for the data collection request:

Field	Description
Based On	Name of the data collection that is the basis of the new data collection.
Category	Name of the category in which the data collection is requested.
Usage Context	The context within which the data is to be used if the data collection is created, as specified by the Data User at the time of request.
Description	Description of the data collection request.

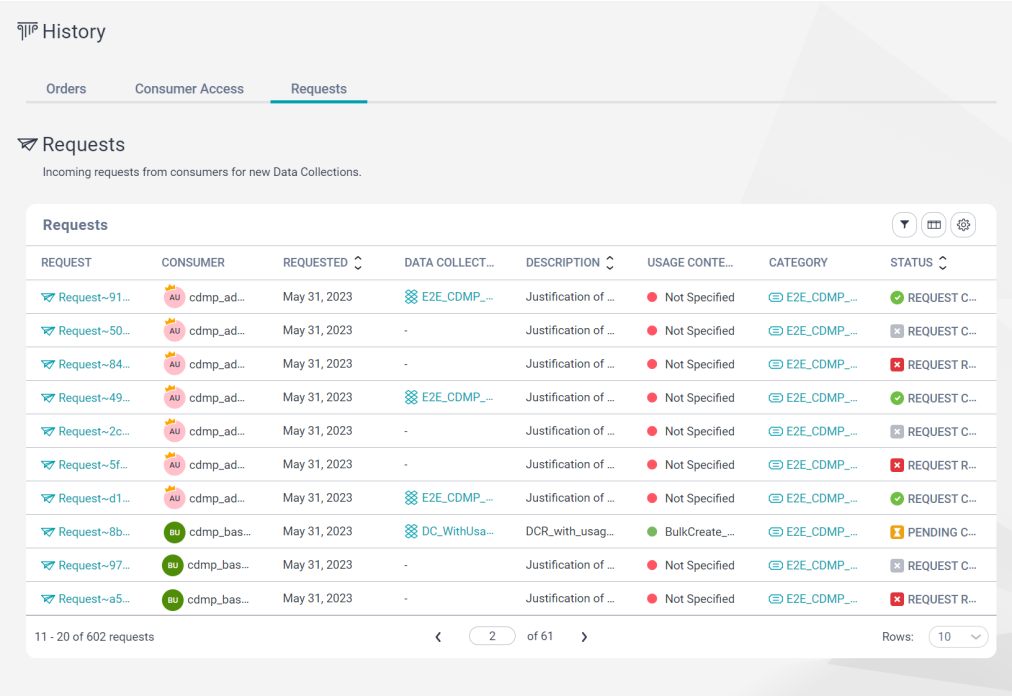

View data collection requests

On the **History** page, you can view all the requests for new data collections that the Data Users have submitted in Data Marketplace.

To view requests for new data collections on the **History** page, verify one of the following prerequisites:

- Your user profile is assigned the Data Marketplace Administrator role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on a category or data collection:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on a category or a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Complete or Reject Data Collection Requests** privileges are enabled in Administrator.
  - **Read** permission for categories, data collection, data collection requests and usage contexts is enabled in Metadata Command Center.

1. Open the **History** > **Requests** page.

2. On the **History** > **Requests** page, you can view the data collection requests.

The following table describes the fields that you can view in the **Requests** grid:

Column	Description
Request	Reference identifier of the data collection request.
Consumer	Name of the Data User that requested the new data collection.
Requested	Date when the Data User submitted the request.
Data Collection	Name of the data collection that is the basis of the new data collection.
Description	Description of the data collection request.
Usage Context	The context within which the data is to be used if the data collection is created, as specified by the Data User at the time of request.
Category	Name of the category in which the data collection is requested.
Status	Status of the data collection request. The data collection request can have one of the following statuses: - **Pending Completion**. A request for a new data collection is submitted. - **Request Completed**. A new data collection was created in response to the request. - **Request Rejected**. The request was rejected by a stakeholder of the category or data collection. - **Request Cancelled**. The data collection request was cancelled.
Last Updated	Latest date when the data collection request was modified.
Assigned To	The delegate of the data collection request. This field can have one of the following values: - **Me**. The data collection request is assigned to you. - **My Group**. The data collection request is assigned to your group. - **All**. The data collection request is assigned to a user or group whose information is accessible to you.

3. To filter the data collection requests that are displayed in the **Requests** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the data collection requests that are pending completion, click **Filter** and select the **Status** filter. In the **Status** filter, select the `Pending Completion` status and click **Filter** again to apply it. After you apply the filter, the **Requests** grid displays only the data collection requests that are pending completion.
4. To view the details of a data collection request, click the request ID in the **Request** column.

Responding to data collection requests

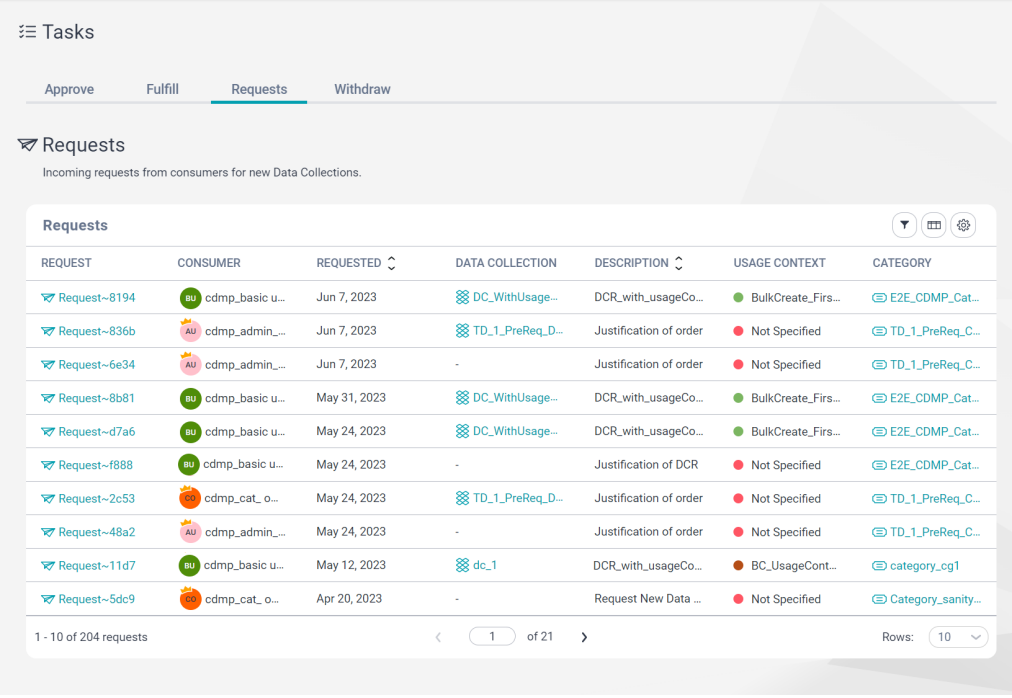

When a Data User requests a new data collection, you can complete or reject the request.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned the Data Marketplace Administrator role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on a category or data collection:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on a category or a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Complete or Reject Data Collection Requests** privileges are enabled in Administrator.
  - **Read** and **Update** permissions for categories, data collections and data collection requests are enabled in Metadata Command Center.
  - **Read** permission for usage contexts is enabled in Metadata Command Center.

Note: When a data collection request is submitted from a category or a data collection, Data Marketplace notifies you only if you are a specifically assigned stakeholder on that category or data collection.

1. Open the **Tasks** > **Requests** page.

2. On the **Tasks** > **Requests** page, you can view the data collection requests that await your action.

The following table describes the fields that you can view in the **Requests** grid:

Field	Description
Request	Reference identifier of the data collection request.
Consumer	Name of the Data User that requested the new data collection.
Requested	Date when the data collection request was submitted.
Data Collection	Name of the data collection that is the basis of the data collection.
Description	Description of the data collection request.
Usage Context	The context within which the data is to be used if the data collection is created as specified by the Data User at the time of request.
Category	Name of the category in which the data collection is requested.
Last Updated	Latest date when the data collection request was modified.
Assigned To	The delegate of the data collection request. This field can have one of the following values: - **Me**. The data collection request is assigned to you. - **My Group**. The data collection request is assigned to your group. - **All**. The data collection request is assigned to a user or group whose information is accessible to you.

To filter the data collection requests that are displayed in the **Requests** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the data collection requests that were placed this month, click **Filter** and select the **Requested** filter. In the **Requested** filter, select `This month` and click **Filter** again to apply it. After you apply the filter, the **Requests** grid displays only the data collection requests that were placed this month.

3. To respond to a new data collection request, click the request ID in the **Request** column.
   - To complete the request, click **Complete**.

The following table describes the fields that you can configure when you complete a data collection request:

Field	Description
Add Comment	Enter a comment to explain how you completed the request. To tag a user to your comment, add @ to populate the list of users. You can use either the name of the user or the user's email address to search for them. **Note:** Ensure that the user you tagged is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help. Alternatively, ensure that their user profile is assigned a role for which the following privileges and permissions are enabled: - **Access Data Marketplace** privilege is enabled in Administrator. - **Read** permission is enabled in Metadata Command Center for orders. Without these privileges and permissions, they won't be able to access your comment despite receiving the notification for it.
Created Data Collection	Select the data collection that was created in response to the request. For more information about how you can create a data collection, see "Creating data collections" on page 39. **Note:** You can select only a data collection that you have permission to update.
Cost Center	Select the cost center of the Data User that submitted the data collection request. If the Data User has entered a cost center value that is not available in Data Marketplace or if the Data User has selected an incorrect cost center value, you can modify the value of this field.

- To reject the request, click **Reject**.
  You can use the **Add Comment** field to explain why you rejected the request.

Creating data collections

A data collection refers to one or more data assets that are bundled together. Data Users can place an order to gain access to the data collections that you create.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following roles:
  - Data Owner
  - Category Owner
  - Data Marketplace Administrator
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.

- **Create**, **Manage Access**, **Read** and **Update** permissions for data collections are enabled in Metadata Command Center.
- **Read** permission for categories and usage contexts is enabled in Metadata Command Center.

1. On the **New** page, click the **Data Collection** tile.

   The following table describes the fields that you can configure on the **New Data Collection** page:

Field	Description
Reference ID	Enter a reference identifier for the data collection. If you don't specify a reference identifier, Data Marketplace automatically assigns a unique value to the item. If you want to specify a reference identifier, enter a unique alphabetical, numeric or alphanumeric value. You can also use special characters when you enter a reference identifier value. Ensure that the value that you enter doesn't use a prefix value that is configured in Metadata Command Center. For more information about reference IDs, see *Manage reference IDs of items* in the *Set Up Data Marketplace* help.
Name	Enter a name for the new data collection as you want it to appear in Data Marketplace. Enter a name that represents the data that it contains.
Description	Enter a purpose for the new data collection Enter a descriptive text that Data Users can use to find the data collection. You can explain the nature of the data and the purpose for which it was created so that users can decide whether it meets their business requirements. You can also upload an image to this field in `.jpg`,`.jpeg`, and `.png` formats. **Note:** - If your Informatica® Intelligent Data Management Cloud™ (IDMC) POD is an Amazon Web Services POD, ensure that the combined size of the files that you upload and the text that you enter in the field doesn't exceed 1 MB. - If your IDMC POD is a Microsoft Azure POD, ensure that the combined size of the files that you upload and the text that you enter in the field doesn't exceed 75 KB.
Status	Select a status for the data collection. The status determines whether the data collection is discoverable by Data Users when they search for it. - To make the data collection discoverable to Data Users, set the status to `Published`. - To make the data collection not discoverable to Data Users, set the status to `Unpublished`.

Field	Description
Category	Select a category for the data collection. A category contains related data collections that are bundled together. The category that you select might be a subcategory to another category. For more information about categories, see *Categories* in the *Set Up Data Marketplace* help. **Note:** If a category is added to an asset group for which you aren't assigned the required permissions, the **Category** field won't display the category. If the category that contains your data collection becomes inactive, Data Users can't discover your data collection on the **Browse** and **Search** pages. If you select a category that is added to an asset group that requires additional permissions, Data Users won't be able to discover the data collection when they browse Data Marketplace for relevant data. For more information about asset groups, see *Implement access controls on metadata* in the *Set Up Data Marketplace* help.
Certified Use	Select the most suitable use for the data.

Note: If your Administrator configured custom attributes in Metadata Command Center for data collections in Data Marketplace, you can view additional fields in the **Additional Information** section. You can use these fields to specify additional information about the data collection. For more information, see *Create custom attributes for items* in the *Set Up Data Marketplace* help.

2. In the **Stakeholders** section, click **Add** to specify the users that will be responsible for the new data collection and the data within it.
3. In the **Add Stakeholders** dialog box, select a role, and then select the users or user groups that you want to assign as stakeholders of the data collection.

   To remove a stakeholder, click the **Delete** icon next to the stakeholder that you want to remove from the **Selected Stakeholders** section.

   Note: When you configure stakeholders for a data collection, consider the following:

   - Ensure that the users that you want to add as the stakeholders of the data collection are already assigned the relevant user role in Administrator. For example, if you want to assign a user as a Data Owner of a data collection, the user must already be assigned the Data Owner user role in Administrator. Additionally, ensure that the relevant user role is configured as a stakeholder role for data collections in Metadata Command Center. For more information, see *Use Metadata Command Center to enrich and manage items* in the *Set Up Data Marketplace* help.
   - The **Users** section displays only the users that are directly assigned the relevant user role. If a user is added to a user group that is assigned the relevant user role, the **Users** section won't display the user.
   - If you don't assign a stakeholder to the new data collection, you can modify the data collection after its creation only if you are a Data Marketplace Administrator or are assigned the **Configure and Manage Data Marketplace** privilege in Metadata Command Center.
4. Click **Save**.

You can also create a data collection from an asset page in Data Marketplace or Data Governance and Catalog using **Create Data Collection**. Click the button to create a new data collection with the asset. For more information about importing assets from Data Governance and Catalog, see *Enrich data collections with Data Governance and Catalog* in the *Set Up Data Marketplace* help.

Adding data assets to a data collection

To enrich your data collections, you can use data assets native to Data Marketplace or data assets imported from Data Governance and Catalog.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** and **Update** permissions for data assets and data collections are enabled in Metadata Command Center.

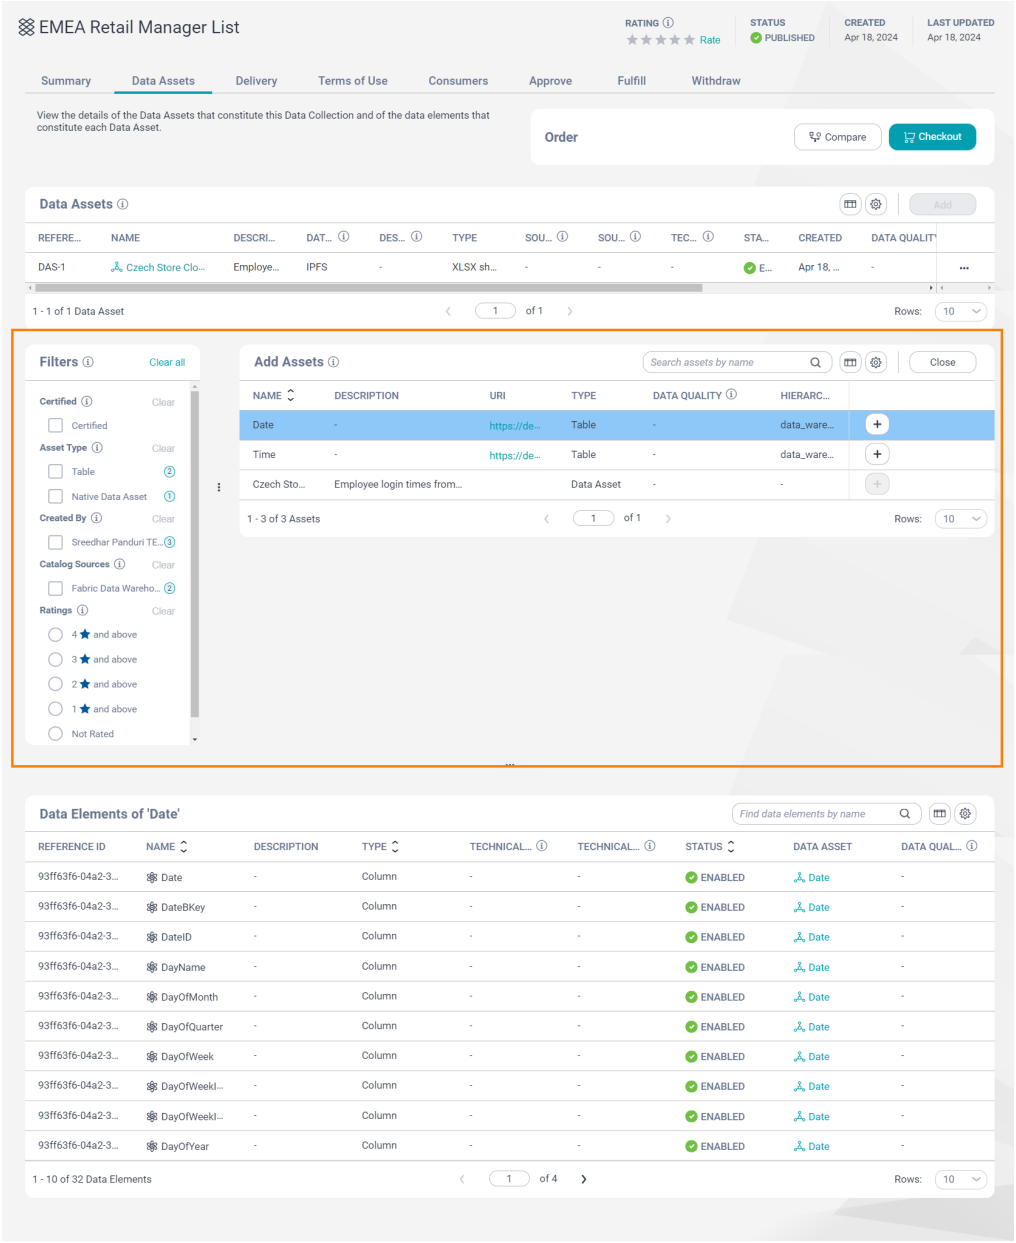

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
2. On the **Data Assets** tab of the data collection page, click **Add** to add new data assets to the collection.
3. In the **Add Assets** grid, you can search for a Data Marketplace or a Data Governance and Catalog asset by the asset name. You can also use filters to assist you with searching for the appropriate asset.

   To view the data elements that constitute an asset, click the asset to reveal the **Data Elements** grid for the selected asset.

   Note: When you add data assets to data collections, consider the following:

   - If a Data Governance and Catalog asset is added to an asset group for which you aren't assigned the required permissions, the **Add Assets** grid won't display the data asset. For more information about asset groups, see the *Implement access controls on metadata* topic in the *Set Up Data Marketplace* help.
   - When the **Add Assets** grid is available, you can view the data elements only for the assets that you want to add to the data collection. To view the data elements that comprise a data asset that is already added to the data collection, close the **Add Assets** grid.
   - If you want to utilize a delivery target that is based on a Managed Access enabled template, ensure that you select only the assets that belong to the same source system. For more information about how you can assign a delivery target to a data collection, see "Specifying delivery targets for data collection" on page 44.

4. Click **Add**.

   You can view the newly added data asset on the **Data Assets** tab of the data collection page. When you add a Data Governance and Catalog asset to a data collection, the **Overview** page of the asset in Data Governance and Catalog indicates that the asset is published to Data Marketplace. Additionally, you can view in Data Governance and Catalog the details of data collection to which the asset was added.

5. Click **Close** to close the **Add Assets** grid.

To remove a data asset, click the Action menu icon next to the data asset that you want to remove, and click **Remove**. In the **Remove** dialog box that appears, click **Remove Data Asset**.

If you want to modify the data elements that comprise the data asset, contact your administrator.

Note: If you add a data asset to a data collection or remove a data asset from a data collection, your changes might take some time to reflect on the **Search** page.

Specifying delivery targets for data collection

A delivery target is a delivery option that you as a stakeholder of a data collection can use to deliver data to a Data User. Stakeholders use delivery templates to create new delivery targets for their data collections. To ensure that you can fulfill an order, configure a delivery target for your data collection.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Create** and **Read** permissions for delivery targets are enabled in Metadata Command Center.
  - **Read** and **Update** permissions for data collections are enabled in Metadata Command Center.
  - **Read** permission for delivery formats, delivery methods, and delivery templates is enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
2. On the **Delivery** tab of the data collection page, click **New**.
3. In the **New Delivery Target** dialog box, configure the properties of the new delivery target.

The following table describes the fields that you can configure in the **New Delivery Target** dialog box:

Field	Description
Delivery Template	Select the delivery template based on which you want to create the delivery target. For more information about delivery templates, see the *Delivery options* topic in the *Set Up Data Marketplace* help. **Note:** If the **Managed Access** option is enabled for the delivery template that you selected, ensure that the data collection for which you are creating this target is comprised only of data assets that belong to the same source system. For more information about how you can add data assets to a data collection, see "Adding data assets to a data collection" on page 42.
Reference ID	Enter a reference identifier for the delivery target. If you don't specify a reference identifier, Data Marketplace automatically assigns a unique value to the item. If you want to specify a reference identifier, enter a unique alphabetical, numeric or alphanumeric value. You can also use special characters when you enter a reference identifier value. Ensure that the value that you enter doesn't use a prefix value that is configured in Metadata Command Center. For more information about reference IDs, see the *Manage reference IDs of items* topic in the *Set Up Data Marketplace* help.
Delivery Target	Enter a name for the delivery target.
Description	Enter a description for the delivery target. Enter a description that helps Data Users understand the utility of the delivery target.
Status	Select a status for the delivery target. The status determines whether the delivery target is available for use to the Data Users that order the data collection. You can select one of the following options: - To make the delivery target available for use to the Data Users that order the data collection, select `Active`. - To make the delivery target unavailable for use to the Data Users that order the data collection, select `Inactive`.
System	Enter the systems for which you want to specify the data.
Location	Specify a location where the data collection is to be delivered. Enter the system URL of the location in this field. **Note:** - If the delivery type is **Automatic**, ensure that the URI that you enter in the **Location** field is publicly accessible. - If Managed Access is enabled for the delivery template that you selected, the data won't be delivered to the location that you specify in the **Location** field. Instead, the data will be delivered to a location that is generated at the time of order fulfillment. The generated location is unique to each order that is fulfilled using this target. For more information, see the *Manage access to data with Data Access Management* topic in the *Set Up Data Marketplace* help.

Field	Description
Type	The delivery type. This field can have the following values: - **Manual**. Stakeholders of the data collection must approve and fulfill the order manually. - **Automatic**. The order approval and fulfillment is automated. For more information about how you can use an automatic type delivery target, see "Automated deliveries" on page 46. **Note:** The values in this field are configured by the user that created the delivery template that you use.
Format	The delivery format. **Note:** The values in this field are configured by the user that created the delivery template that you use.
Method	The delivery method. **Note:** The values in this field are configured by the user that created the delivery template that you use.
Delivery Owners	Name of the users that manage the delivery template based on which you want to create the delivery target. **Note:** The values in this field are configured by the user that created the delivery template that you use.

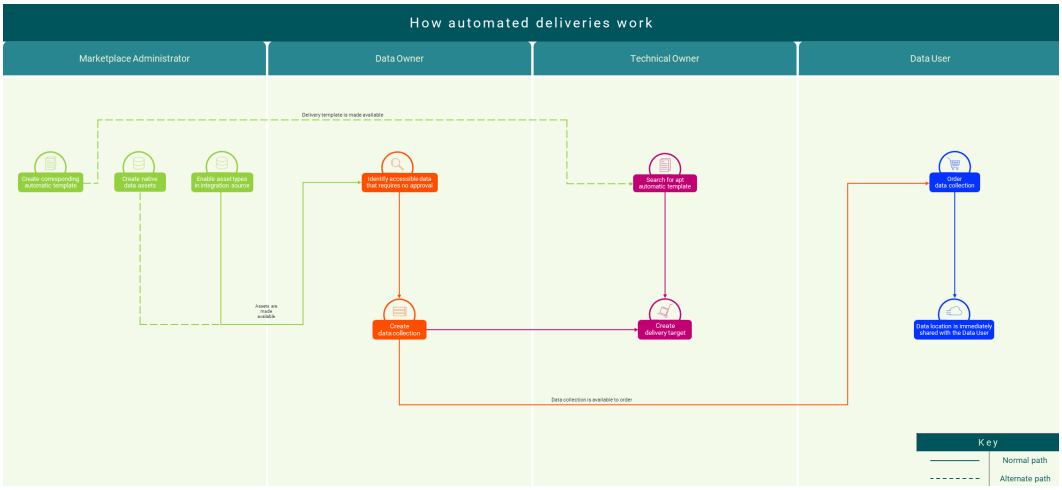

4. Click **Save**.

You can also modify the delivery targets that you have created. For more information about how you can modify a delivery target, see "Modifying delivery targets" on page 51.

Automated deliveries

If a data collection that you own requires no approval to be accessed by data users, you can configure an automatic type delivery target type for the data collection. This simplifies the ordering experience of the Data User that orders the data collection.

The following image shows the overall process of how a data collection whose delivery is automated is delivered to a Data User that ordered it:

Note: The process flow is illustrated using the predefined roles for Data Marketplace.

Example

In a food and beverage company, Arthur and Gawain are the administrators of all of the websites in the organization. One of the websites that Arthur manages is used solely by the employees to get updates that relate to the organization. At the end of the calendar year, Arthur must use an XLSX sheet that is present in a shared SFTP folder to update the organization's holiday calendar on the website.

Vivienne is the Human Resources manager in the organization. She has prepared an XLSX sheet that lists the holidays for the upcoming year and has uploaded the file to a shared FTP folder. The shared FTP folder is configured to be accessible to everyone in the organization. As a Data Owner, she also publishes the data to the "Holiday List" data collection within the "Human Resources" category in Data Marketplace.

Gareth works in the Human Resources department with Vivienne. He is the Technical Owner of the "Holiday List" data collection. He uses an automatic type delivery template that represents the shared SFTP folder to create the delivery target of the "Holiday List" data collection.

Arthur calls in sick and therefore Gawain must perform the task in Arthur's absence. Unlike Arthur, Gawain is unaware of the file path of the XLSX sheet. Gawain uses the keyword "holiday" to search in Data Marketplace and sees the "Holiday List" data collection that Vivienne had published. He places an order for the data collection. As soon as the order is placed, it is delivered and Gawain receives the file path to the XLSX sheet that Vivienne had published.

For more information about how you can configure a delivery target for a data collection, see "Specifying delivery targets for data collection" on page 44.

Note: The preceding example uses the predefined roles for Data Marketplace.

Adding terms of use to a data collection

You can specify the terms of use for a data collection that exists in Data Marketplace. The terms of use that you specify are displayed on the checkout page when a Data User orders a data collection.

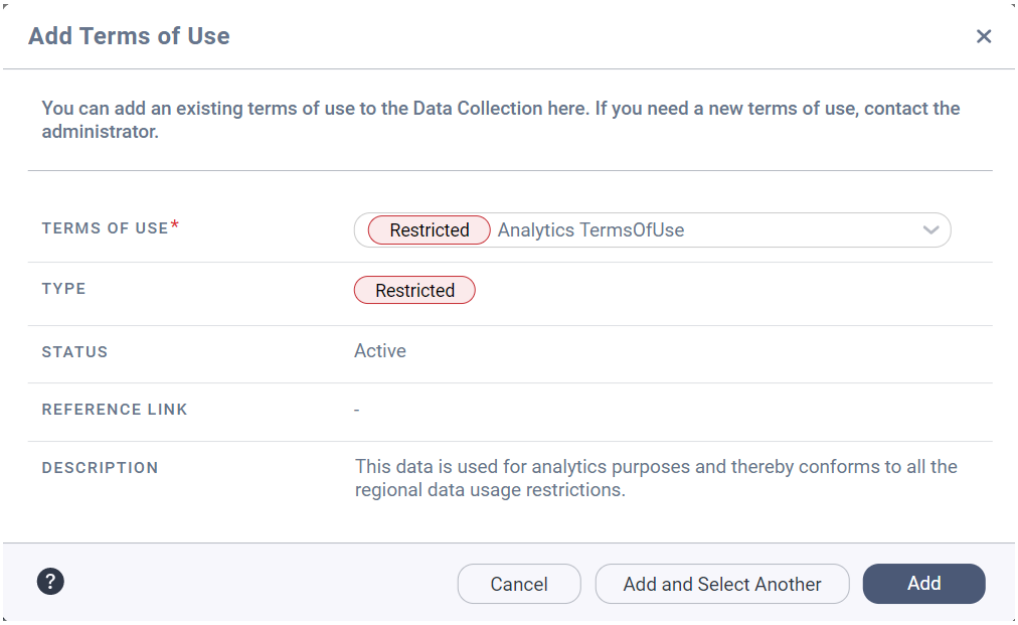

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following permissions and privileges are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** and **Update** permissions for data collections are enabled in Metadata Command Center.
  - **Read** permission for terms of use is enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.

2. On the **Terms of Use** tab of the data collection, click **Add**.
3. In the **Add Terms of Use** dialog box, select the applicable terms of use.

4. Click **Add** to save your changes and exit the dialog box.

   If you want to add more than one terms of use, click **Add and Select Another**.

   Note: A Data User can check out a data collection only if the **Usage Guide** step in the **Order Checkout** wizard contains the **General Terms Of Use** and **Terms of Use**.

To remove a terms of use, click the Action menu icon next to the terms of use that you want to remove, and click **Remove**. In the **Remove** dialog box that appears, click **Yes**.

For more information about the terms of use, see the *Terms of use* topic in the *Set Up Data Marketplace* help.

Modifying data collections

You can modify the properties of a data collection for which you or your group is assigned as a stakeholder.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner
  - Category Owner

- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** and **Update** permissions for data collections are enabled in Metadata Command Center.
  - **Read** permission for categories and usage contexts is enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.

2. On the **Summary** tab of the data collection page, click **Edit** to modify the **Data Collection Summary** section.

   The following table describes the fields that you can configure in the **Data Collection Summary** section:

Field	Description
Reference ID	Enter a reference identifier for the data collection. If you don't specify a reference identifier, Data Marketplace automatically assigns a unique value to the item. If you want to specify a reference identifier, enter a unique alphabetical, numeric or alphanumeric value. You can also use special characters when you enter a reference identifier value. Ensure that the value that you enter doesn't use a prefix value that is configured in Metadata Command Center. For more information about reference IDs, see the *Manage reference IDs of items* topic in the *Set Up Data Marketplace* help.
Name	Enter a name for the data collection.
Description	Enter a purpose for the data collection. Enter a descriptive text that Data Users can use to find the data collection. You can explain the nature of the data and the purpose for which it was created so that users can decide whether it meets their business requirements. You can also upload an image to this field in `.jpg`, `.jpeg`, and `.png` formats. **Note:** - If your IDMC POD is an Amazon Web Services POD, ensure that the combined size of the files that you upload and the text that you enter in the field does not exceed 1 MB. - If your IDMC POD is a Microsoft Azure POD, ensure that the combined size of the files that you upload and the text that you enter in the field does not exceed 75 KB.
Status	Select a status for the data collection. The status determines whether the data collection is discoverable by Data Users when they search for it. - To make the data collection discoverable to Data Users, set the status to `Published`. - To make the data collection not discoverable to Data Users, set the status to `Unpublished`. **Note:** If you modify the status of a data collection to `Unpublished` after it is ordered by a Data User, the stakeholders of the collection can still fulfill the order.

Field	Description
Category	Select a category for the data collection. A category contains related data collections that are bundled together. It is possible that the applicable category that you select is a subcategory to another category. For more information about categories, see the *Categories* topic in the *Set Up Data Marketplace* help. **Note:** When you modify the category of a data collection, consider the following points: - If a data collection is related to more than 10 items, a job to modify the data collection is triggered on the **Job Monitoring** page in Metadata Command Center. Items that are related to a data collection include consumer accesses, delivery targets, orders, and data collection requests that are linked to the data collection. For more information about monitoring jobs, see *Monitoring jobs* in the *Administration* help for Metadata Command Center. While Data Marketplace updates the category of the data collection, you can't modify the stakeholders of the data collection. Additionally, you can't modify the asset group, parent and stakeholders of the selected category, the data collection's current category, and all the categories in the category hierarchy. - If a category is added to an asset group for which you aren't assigned the required permissions, the **Category** field won't display the category. - If you select a category that is added to an asset group that requires additional permissions, Data Users won't be able to discover the data collection when they browse Data Marketplace for relevant data. For more information about asset groups, see *Implement access controls on metadata* in *Set Up Data Marketplace* help. If the category that contains your data collection becomes inactive, Data Users can't discover your data collection on the **Browse** and **Search** pages.
Certified Use	Select the most suitable use for the data.

If your Administrator has configured custom attributes in Metadata Command Center for data collections in Data Marketplace, you can view the custom fields in the **Additional Information** section. You can use these fields to specify additional information about the data collection.

3. Click **Save**.

Modifying stakeholders of a data collection

You can modify the stakeholders of a data collection. Stakeholders are authorized users that are responsible for a data collection and the data within it.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner
  - Category Owner

- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read**, **Manage Access** and **Update** permissions for data collections are enabled in Metadata Command Center.
  - **Read** permission for categories is enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
2. On the **Stakeholders** tab of the data collection, click **Edit**.
3. In the **Users** section on the **Edit Stakeholders** dialog box, select a role, and then select the users or user groups that you want to assign as stakeholders of the data collection.

   To remove a stakeholder, click the **Delete** icon next to the stakeholder that you want to remove from the **Selected Stakeholders** section.

   Note: When you modify the stakeholders of a data collection, consider the following points:

   - Ensure that the users that you want to add as the stakeholders of the data collection are already assigned the relevant user role in Administrator. For example, if you want to assign a user as a Data Owner of a data collection, the user must already be assigned the Data Owner user role in Administrator. Additionally, ensure that the relevant user role is configured as a stakeholder role for data collections in Metadata Command Center. For more information, see the *Use Metadata Command Center to enrich and manage items* in the *Set Up Data Marketplace* help.
   - The **Users** section displays only the users that are directly assigned the relevant user role. If a user is added to a user group that is assigned the relevant user role, the **Users** section won't display the user.
   - If a data collection is related to more than 10 items, a job to modify the data collection is triggered on the **Job Monitoring** page in Metadata Command Center. Items that are related to a data collection include consumer accesses, delivery targets, orders, and data collection requests that are linked to the data collection. For more information about monitoring jobs, see *Monitoring jobs* in the *Administration* help for Metadata Command Center. While Data Marketplace updates the stakeholders for the data collection, you can't modify the stakeholders of the data collection. Additionally, you can't modify the asset group, parent and stakeholders of all the categories in the category hierarchy.
4. Click **OK**.

Modifying delivery targets

You can modify the delivery target of a data collection for which you or your group is assigned as a stakeholder.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner

- Technical Owner
- Category Owner

- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** and **Update** permissions for data collections and delivery targets are enabled in Metadata Command Center.
  - **Read** permission for delivery formats, delivery methods and delivery templates is enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.

2. On the **Delivery** tab of the data collection page, click the Action menu icon and click **Edit** to modify a delivery target.

   Note: You can't modify a delivery target that you have configured as the default delivery option of the data collection.

3. In the **Edit Delivery Target** dialog box, you can modify the properties of a delivery target.

   The following table describes the fields that you can configure in the **Edit Delivery Target** dialog box:

Field	Description
Delivery Template	The delivery template based on which the delivery target was created. **Note:** You can't modify this field.
Reference ID	Enter the reference identifier of the delivery target. If you don't specify a reference identifier, Data Marketplace automatically assigns a unique value to the item. If you want to specify a reference identifier, enter a unique alphabetical, numeric or alphanumeric value. You can also use special characters when you enter a reference identifier value. Ensure that the value that you enter doesn't use a prefix value that is configured in Metadata Command Center. For more information about reference IDs, see the *Manage reference IDs of items* topic in the *Set Up Data Marketplace* help.
Delivery Target	Enter a name for the delivery target.
Description	Enter a description for the delivery target. Enter a description that helps Data Users understand the utility of the delivery target.
Status	Select a status for the delivery target. The status determines whether the delivery target is available for use to the Data Users that order the data collection. You can select one of the following options: - To make the delivery target available for use to the Data Users that order the data collection, select `Active`. - To make the delivery target unavailable for use to the Data Users that order the data collection, select `Inactive`.
System	Enter the systems for which you want to specify the data.

Field	Description
Location	Specify a location where the data collection is to be delivered. Enter the system URL of the location in this field. **Note:** - If the delivery type is **Automatic**, ensure that the URI that you enter in the **Location** field is publicly accessible. - If Managed Access is enabled for the delivery template that you selected, the data won't be delivered to the location that you specify in the **Location** field. Instead, the data will be delivered to a location that is generated at the time of order fulfillment. The generated location is unique to each order that is fulfilled using this target. For more information, see the *Manage access to data with Data Access Management* topic in the *Set Up Data Marketplace* help.
Type	The delivery type. This field can have the following values: - **Manual**. Stakeholders of the data collection must approve and fulfill the order manually. - **Automatic**. The order approval and fulfillment is automated. For more information about how you can use an automatic type delivery target, see "Automated deliveries" on page 46. **Note:** The values in this field are configured by the user that created the delivery template that you use.
Format	The delivery format. **Note:** The values in this field are configured by the user that created the delivery template that you use.
Method	The delivery method. **Note:** The values in this field are configured by the user that created the delivery template that you use.
Delivery Owners	Name of the users that manage the delivery template based on which you want to create the delivery target. **Note:** The values in this field are configured by the user that created the delivery template that you use.

Note: In the **Delivery Target** grid, you can select a delivery target to set it as the default for the data collection. The default delivery target that you configure is the default delivery option when a Data User checks out the data collection. Under **Default**, click the button next to the delivery target to select it as the default delivery target option.

4. Click **Save**.

Deleting delivery targets

If you created a delivery target accidentally or if a delivery target is obsolete, you can delete it.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator

- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Delete** and **Read** permissions for delivery targets are enabled in Metadata Command Center.
  - **Read** and **Update** permissions for data collections are enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
2. In the **Delivery Targets** grid on the **Delivery** tab of a data collection page, click the Action menu icon next to the delivery target that you want to delete.

   Note: You can't delete a delivery target that you have already configured as the default delivery option for a data collection. You can't delete a delivery target that is associated with a consumer access or an order. For more information about how you can delete an order, see *Delete orders* topic in the *API Reference* help.
3. In the Action menu, click **Delete**.
4. In the **Delete Delivery Target** dialog box, click **Delete**.

Linking data collections

As a stakeholder of a data collection, you can link data collections with each other so that Data Users have a wider choice of related collections that they can access.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned the Data Marketplace Administrator role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** and **Update** permissions for categories, data collections and usage contexts are enabled in Metadata Command Center.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
2. In the **Similar Data** section on the **Summary** tab of the data collection page, click **Link Similar Data**.

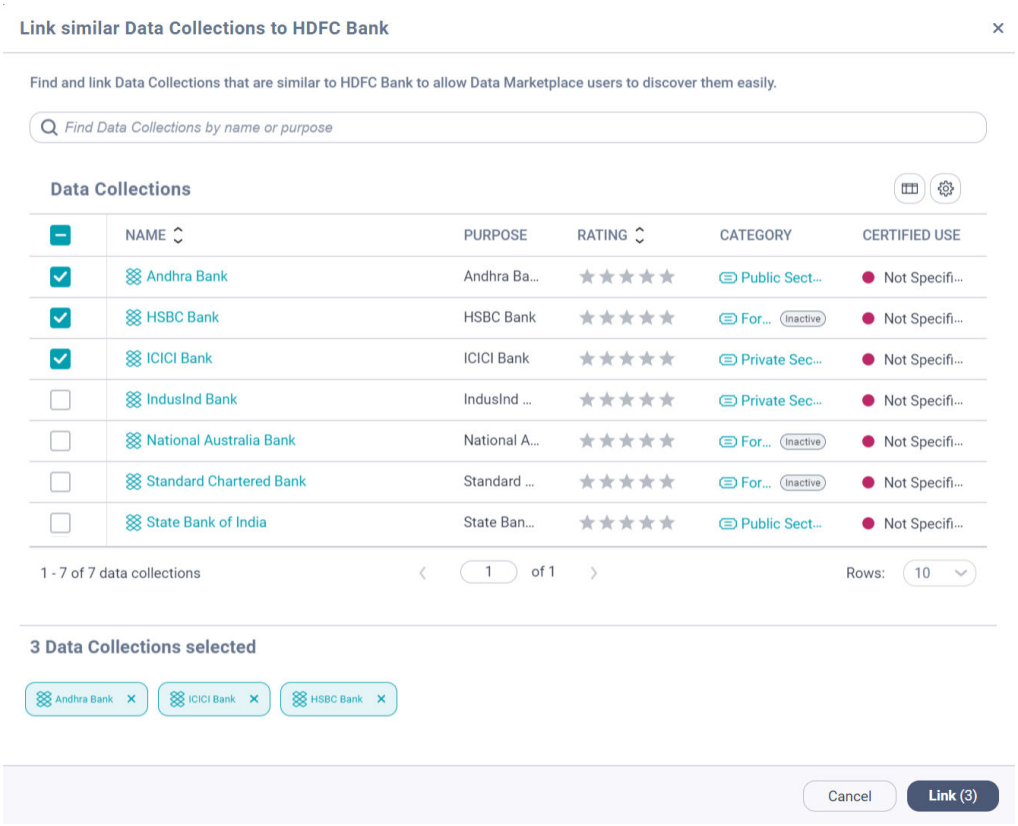

3. In the **Link similar Data Collections** dialog box, find similar data collections that you want to link to your data collection, and select them.

   The following table describes the fields that you can view in the **Link similar Data Collections** dialog box:

Field	Description
Name	Name of the data collection.
Description	Purpose of the data collection as specified by a stakeholder of the data collection.
Rating	Average rating of the data collection.
Category	Name of the category of the data collection.
Certified Use	The uses for which the data is best suited as specified by the stakeholders of the data collection.

   Note: When you link data collections, consider the following:

   - You can link an unpublished data collection to the collection for which you are responsible. However, you can't click the unpublished data collection to navigate to its details page if you are not its stakeholder.
   - If a data collection is added to an asset group for which you aren't assigned the required permissions, the **Data Collections** grid won't display the data collection. For more information about asset groups, see the *Implement access controls on metadata* topic in the *Set Up Data Marketplace* help.

4. Click **Link**.

The data collections that you linked appear in the **Similar Data** section on the **Summary** tab of the data collection page. When you link similar data collections, it helps Data Users to discover these data collections. If the **Similar Data** section contains an unpublished data collection, you can't click it to navigate to the details page of the unpublished collection if you are not its stakeholder.
You can use the compare feature to determine the degree of similarity between the data collection that you own and the other collections in Data Marketplace. For more information about you can compare data collections, see "Compare data collections" on page 15.

Deleting data collections

If you created a data collection accidentally or if a data collection is obsolete, you can delete it.

Before you can delete a collection, verify the following prerequisites:

Verify the privileges and permissions

Verify one of the following:

- Your user profile is assigned the Data Marketplace Administrator role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Delete** and **Read** permissions for data collections are enabled in Metadata Command Center.

Verify that the data collection doesn't have a consumer access, order or request

Ensure that the data collection that you want to delete does not have a consumer access, an order or a new data collection request in it.

1. Open a data collection.

   For more information about how you can find a data collection, see "Search and view data collections" on page 6.
2. In the **Data Collection Summary** panel on the data collection page, click **Delete**.

   You can also delete a data collection from the category page of the data collection. To do this, in the **Data Collections** grid on the category page, click **Action** > **Delete** next to the data collection that you want to delete.
3. In the **Delete Data Collection** dialog box, click **Delete**.

The data collection that you selected is deleted. When you delete a collection, the delivery targets associated with it are deleted. However, the data assets and terms of use that are associated with the data collection are not deleted.

Note: If the data collection that you want to delete is linked to another collection, this link is removed when you delete the data collection. In this situation, the other collection that was linked does not get deleted.

CHAPTER 3

Deliver data collections

As a stakeholder of a data collection, you can approve or reject the a data collection.

If you approve an order, you or a different stakeholder can deliver the data to the Data User. After data is delivered, you can view all order details and their approval status on the **History** page.

As a stakeholder, you might also have the authority to manage a Data User's access to the data for which you are responsible. If you think that a Data User no longer requires access to a collection, you can withdraw consumer access to the data collection.

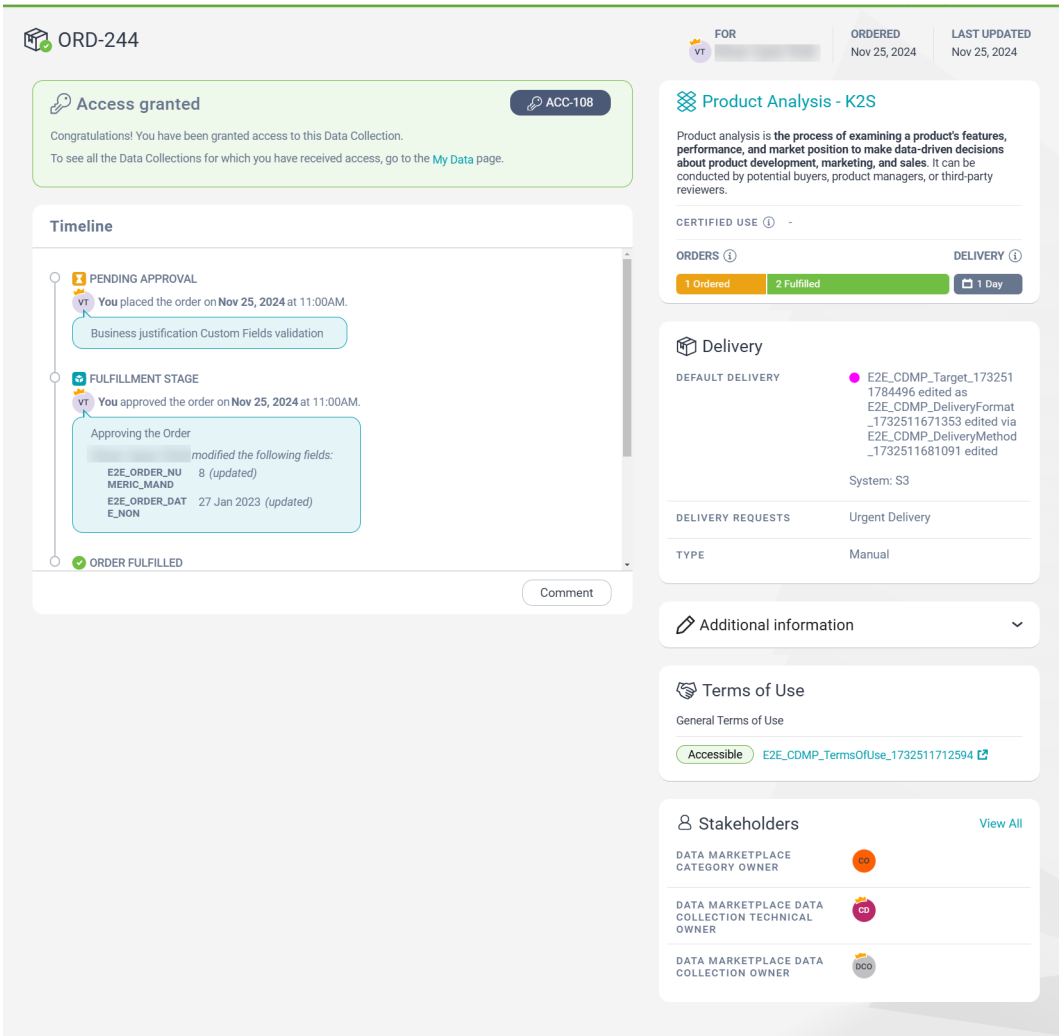

Orders

A Data User creates an order to gain access to a data collection. Stakeholders of the data collection review a Data User's order and approve and fulfill the request.

View order details

On an order page, you can view details of your order and the details of the ordered data collection.

The following image shows an order summary page:

Prerequisites

To view an order, verify one of the following prerequisites:

- The order was created by you and your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the ordered data collection:
  - Data Owner
  - Technical Owner
  - Category Owner

- You are either an inherited or specifically assigned stakeholder on the ordered data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Approve or Reject Orders** or **Fulfill Or Reject Orders** privilege is enabled in Administrator.
  - **Read** permission for data collections, delivery targets, orders, terms of use and usage contexts is enabled in Metadata Command Center.

Timeline section

In the **Timeline** section, you can view a summary of the actions and comments on the order, along with the timestamp of each action or comment.

Note: If you were tagged in a comment, but the order was neither created by you nor are you a stakeholder with the permissions outlined in the *Prerequisites* section, you can't tag any users in your comments.

Consumer information section

The following table describes the fields that you can view in the consumer information section:

Field	Description
For	Name of the Data User that ordered the data collection.
Ordered	Date when the data collection was ordered.
Last Updated	Latest date when the order was modified.

Data collection section

In the data collection section, you can view the details of the ordered data collection. To view more details of the data collection that is ordered, hover your cursor over the data collection details section.

Delivery section

The following table describes the fields that you can view in the **Delivery** section:

Field	Description
Default Delivery	The default delivery target of the ordered data collection.
Delivery Requests	Additional information that pertains to the delivery of the data, as specified by the Data User.
Type	The delivery type. This field can have the following values: - **Manual**. Stakeholders of the data collection must approve and fulfill the order manually. - **Automatic**. The order approval and fulfillment is automated.

Additional Information section

In the **Additional Information** section, you view the additional information specified by the Data User at the time of order. The properties that you see in this section are defined by your Administrator in Metadata Command Center. For more information, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

Terms of Use section

In the **Terms of Use** section, you can view the terms of use that apply to the data collection.

Stakeholders section

In the **Stakeholders** section, you can view the names of the stakeholders who are responsible for the ordered data collection.

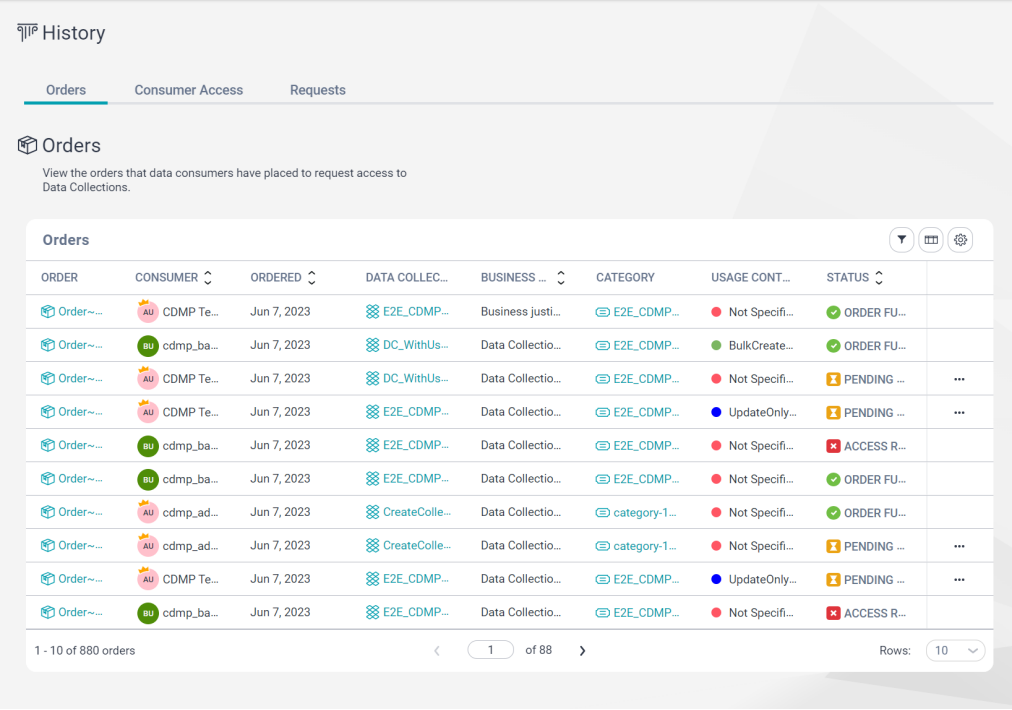

View orders

On the **History** page, you can view all the orders placed in Data Marketplace.

To view the orders for data collections on the **History** page, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Data Owner
  - Technical Owner
  - Category Owner
  - Technical Administrator
  - Data Marketplace Administrator
- You are assigned as a stakeholder on a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Approve or Reject Orders** or **Fulfill Or Reject Orders** privilege is enabled in Administrator.
  - **Read** permission for categories, data collections, orders and usage contexts is enabled in Metadata Command Center.

1. Open the **History** > **Orders** page.

2. On the **History** > **Orders** page, you can view the order details.

   The following table describes the fields that you can view in the **Orders** grid:

Column	Description
Order	Reference identifier for the order.
Consumer	Name of the Data User that ordered the data collection.
Ordered	Date when the data collection was ordered.
Data Collection	Name of the ordered data collection.
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order.
Category	Name of the category that contains the ordered data collection.
Usage Context	The context within which the data is used as specified by the Data User at the time of order.
Status	The status of the order. An order can have one of the following statuses: - **Pending Approval**. The order is pending for approval with a stakeholder of the ordered data collection. - **Access Rejected**. The order is rejected by a stakeholder of the ordered data collection. - **Fulfillment Stage**. The order is approved for fulfillment. A stakeholder of the ordered data collection must deliver the data to the Data User. - **Order Fulfilled**. The ordered data is delivered to the Data User. - **Order Cancelled**. The order is cancelled by the Data User.
Last Updated	Latest date when the order was modified.
Assigned To	The delegate of the order. This field can have one of the following values: - **Me**. The order is assigned to you. - **My Group**. The order is assigned to your group. - **All**. The order is assigned to a user or group whose information is accessible to you.

   To filter the orders that are displayed in the **Orders** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the orders that are fulfilled, click **Filter** and select the **Status** filter. In the **Status** filter, select the `Order Fulfilled` status and click **Filter** again to apply it. After you apply the filter, the **Orders** grid displays only the orders that are fulfilled.

3. To view the details of an order, click the order ID in the **Order** column.
4. To view the details of an ordered data collection, click the data collection name in the **Data Collection** column.

Responding to orders

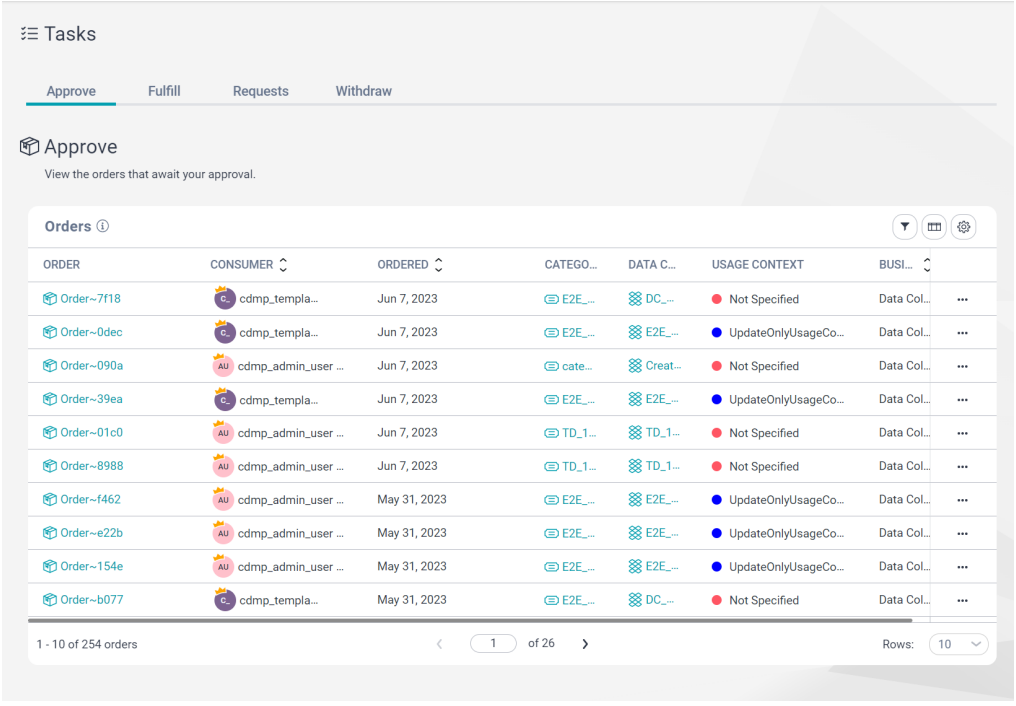

When a Data User orders a data collection, you can approve or reject the order.

To perform this task, verify one of the following prerequisites:

- Your user profile is assigned the Data Marketplace Administrator user role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the ordered data collection:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the ordered data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Approve or Reject Orders** privileges are enabled in Administrator.
  - **Read** and **Update** permissions for cost centers, data collections and orders are enabled in Metadata Command Center.
  - **Read** permission for categories and usage contexts is enabled in Metadata Command Center.

Note: When a data collection is ordered, Data Marketplace notifies you only if you are a specifically assigned stakeholder on that data collection.

1. Open the **Tasks** > **Approve** page.

2. On the **Tasks** > **Approve** page, you can view the orders for all the data collections that await your action.

The following table describes the fields that you can view in the **Orders** grid:

Field	Description
Order	Reference identifier of the order.
Consumer	Name of the Data User that ordered the data collection.
Ordered	Date when the data collection was ordered.
Category	Name of the category that contains the ordered data collection.
Data Collection	Name of the ordered data collection.
Usage Context	The context within which the data is to be used if the order is fulfilled as specified by the Data User.
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order.
Last Updated	Latest date when the order was modified.
Assigned To	The delegate of the order. This field can have one of the following values: - **Me**. The order is assigned to you. - **My Group**. The order is assigned to your group. - **All**. The order is assigned to a user or group whose information is accessible to you.

To filter the orders that are displayed in the **Orders** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the orders that were placed this month, click **Filter** and select the **Ordered** filter. In the **Ordered** filter, select `This month` and click **Filter** again to apply it. After you apply the filter, the **Orders** grid displays only the orders that were placed this month.

To view the details of an order, click the order ID in the **Order** column. To view the details of the data collection that is ordered, click the data collection name in the **Data Collection** column.

3. To respond to an order, click the Action menu to reveal the following options:

   - To approve the order, click **Approve**.
     The following table describes the fields that you can configure in the **Approve Access Request** dialog box:

Field	Description
Consumer	Name of the Data User that ordered the data collection. **Note:** You can't modify this field.
Ordered	Date when the data collection was ordered. **Note:** You can't modify this field.
Data Collection	Name of the ordered data collection. **Note:** You can't modify this field.

Field	Description
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order. **Note:** You can't modify this field.
Cost Center	Select the cost center of the Data User that placed the order. If the Data User has entered a cost center value that is not available in Data Marketplace or if the Data User has selected an incorrect cost center value, you can modify the value of this field.
Comment	Enter a comment to explain the reason behind the action taken. To add a comment, click **Comment**. To tag a user to your comment, add `@` to populate the list of users. You can use either the name of the user or the user's email address to search for them. **Note:** Ensure that the user you tagged is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help. Alternatively, ensure that their user profile is assigned a role for which the following privileges and permissions are enabled: - **Access Data Marketplace** privilege is enabled in Administrator. - **Read** permission for orders is enabled in Metadata Command Center. Without the aforementioned privileges and permissions, they won't be able to access your comment despite receiving the notification for it.

If your Administrator has configured in Metadata Command Center custom attributes for orders in Data Marketplace, the **Approve Access Request** dialog box will display additional fields. If required, you can modify the values in these custom fields that the Data User entered at the time of order. For more information, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

- To reject the order, click **Reject**.
  The following table describes the fields that you can configure in the **Reject Access Request** dialog box:

Field	Description
Consumer	Name of the Data User that ordered the data collection. **Note:** You can't modify this field.
Ordered	Date when the data collection was ordered. **Note:** You can't modify this field.
Data Collection	Name of the ordered data collection. **Note:** You can't modify this field.

Field	Description
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order. **Note:** You can't modify this field.
Comment	Enter a comment to explain the reason behind the action taken. To add a comment, click **Comment**. To tag a user to your comment, add @ to populate the list of users. You can use either the name of the user or the user's email address to search for them. **Note:** Ensure that the user you tagged is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help. Alternatively, ensure that their user profile is assigned a role for which the following privileges and permissions are enabled: - **Access Data Marketplace** privilege is enabled in Administrator. - **Read** permission for orders is enabled in Metadata Command Center. Without the aforementioned privileges and permissions, they won't be able to access your comment despite receiving the notification for it.

4. Alternatively, you can respond to an order from the order page. To do this, click an order ID in the **Orders** grid of the **Tasks** > **Approve** tab. In the **Timeline** section of the order page, you can approve or reject the order.
   a. To approve an order, click **Approve**.
   b. To reject an order, click **Reject**.
   c. Optionally, you can use the **Add Comment** field to explain the reason behind the action taken.

If you approve an order, a stakeholder of the data collection delivers the data collection to the Data User. For more information about order fulfillment, see "Fulfilling orders" on page 65.

Fulfilling orders

As a stakeholder of the data collection, you can deliver the data for orders that are approved for fulfillment.

To perform this task, verify one of the following prerequisites:

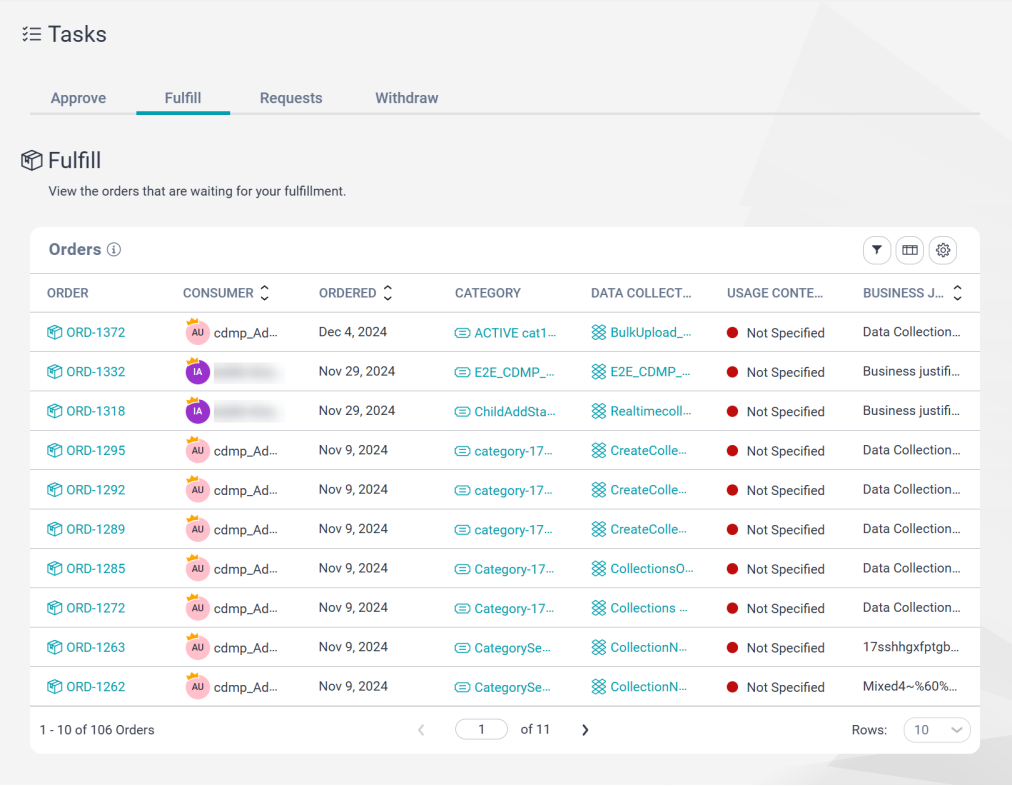

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with the Technical Owner stakeholder role on the ordered data collection.
- You are either an inherited or specifically assigned stakeholder on the ordered data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Fulfill Or Reject Orders** privileges are enabled in Administrator.
  - **Create** and **Read** permissions for consumer accesses are enabled in Metadata Command Center.
  - **Read** and **Update** permissions for cost centers, data collections and orders are enabled in Metadata Command Center.

- **Read** permission for categories, delivery targets and usage contexts is enabled in Metadata Command Center.

1. Deliver the data to the Data User.

   Perform this step outside the Data Marketplace environment. For example, you can provide access to a database or send a data file by email.

2. After you deliver the data, open the **Tasks** page.

3. On the **Tasks** > **Fulfill** tab, you can view the orders that are approved for fulfillment.

   The following table describes the fields that you can view in the **Orders** grid:

Field	Description
Order	Reference identifier of the order.
Consumer	Name of the Data User that ordered the data collection.
Ordered	Date when the data collection was ordered.
Category	Name of the category that contains the ordered data collection.
Data Collection	Name of the ordered data collection.
Usage Context	The context within which the data is to be used if the order is fulfilled as specified by the Data User.

Field	Description
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order.
Last Updated	Latest date when the order was modified.
Assigned To	The delegate of the order. This field can have one of the following values: - **Me**. The order is assigned to you. - **My Group**. The order is assigned to your group. - **All**. The order is assigned to a user or group whose information is accessible to you.

To filter the orders that are displayed in the **Orders** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the orders that were placed this month, click **Filter** and select the **Ordered** filter. In the **Ordered** filter, select `This month` and click **Filter** again to apply it. After you apply the filter, the **Orders** grid displays only the orders that were placed this month.

To view the details of an order, click the order ID in the **Order** column. To view the details of the data collection that is ordered, click the data collection name in the **Data Collection** column.

4. In the **Order** column, click the order that you want to fulfill.
5. In the **Timeline** section of the order page, click **Fulfill**.

The following table describes the fields that you can configure when you fulfill an order:

Field	Description
Delivery Target	Select the delivery target that you used to deliver the data. If the data collection doesn't have a delivery target or if none of the delivery targets meet the Data User's requirements, you can create a new delivery target. For more information about how you can create a new delivery target, see "Specifying delivery targets for data collection" on page 44. If you want to ensure that the data that is to be delivered is customized based on the characteristics of the data, the Data User and the usage context that they specified in the order, you can use a delivery target for which the **Managed Access** option is enabled. For more information, see the *Manage access to data with Data Access Management* topic in the *Set Up Data Marketplace* help.
Add Comment	Enter a comment about the data delivery. To tag a user to your comment, add `@` to populate the list of users. You can use either the name of the user or the user's email address to search for them. **Note:** Ensure that the user you tagged is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help. Alternatively, ensure that their user profile is assigned a role for which the following privileges and permissions are enabled: - **Access Data Marketplace** privilege is enabled in Administrator. - **Read** permission for orders is enabled in Metadata Command Center. Without the aforementioned privileges and permissions, they won't be able to access your comment despite receiving the notification for it.
Cost Center	Select the cost center of the Data User that placed the order. If the Data User has entered a cost center value that is not available in Data Marketplace or if the Data User has selected an incorrect cost center value, you can modify the value of this field.

6. To reject a fulfillment request, click **Reject**.

When you fulfill an order, a consumer access record is created. For more information about consumer accesses, see "Consumer accesses" on page 68.

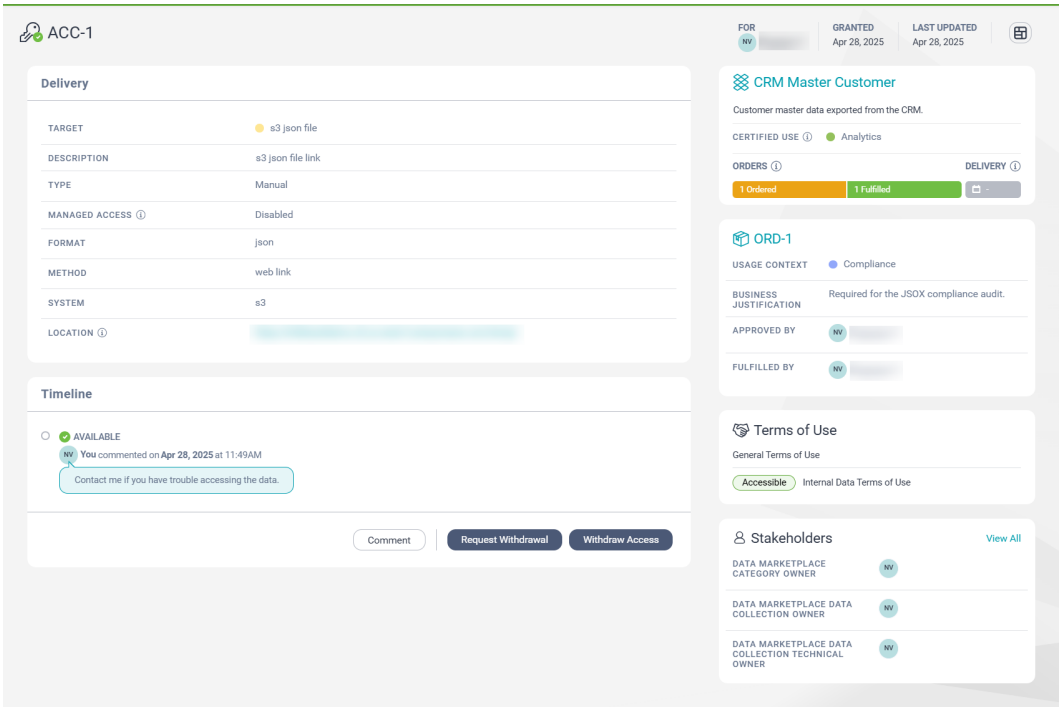

Consumer accesses

A consumer access is a record that indicates a Data User's access to a data collection, along with other details such as the date of delivery, details of the stakeholder that delivered the data, and the delivery option that was used for the delivery.

View consumer access details

On a consumer access page, you can view details of your access to a data collection and the details of the order used to deliver the collection to you.

The following image shows a consumer access page:

Prerequisites

To view a consumer access, verify one of the following prerequisites:

- The consumer access record is created for your access to the data collection and your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.
- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection that is associated with the consumer access:
  - Data Owner
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection that is associated with the consumer access and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.

- **Read** permission for consumer accesses, data collections, delivery formats, delivery methods, delivery targets, orders, terms of use and usage contexts is enabled in Metadata Command Center.

Delivery section

The following table describes the fields that you can view in the **Delivery** section:

Field	Description
Target	Name of the delivery target used to deliver the data collection.
Description	Description of the delivery target used to deliver the data collection.
Type	The delivery type. This field can have the following values: - **Manual**. Stakeholders of the data collection must approve and fulfill the order manually. - **Automatic**. The order approval and fulfillment is automated.
Managed Access	A delivery setting that determines whether or not a unique location was created at the time of order fulfillment. - If Managed Access is enabled, the data is made available in a location that is unique to this consumer access. - If Managed Access is disabled, the same data is made available in a data location that is common to all Data Users.
Format	Format in which the data was delivered.
Method	Medium that was used to deliver the data to you.
System	Name of the system where the data was delivered.
Location	Location where the data is delivered. If Managed Access is enabled for the target that is used for the delivery, the data is delivered to a location that is unique to the consumer access that you are viewing. For more information about how you can access the data that was delivered using Data Access Management, see the *Data Access Management* help. **Note:** By default, the location details are visible if the system can verify one of the following prerequisites: - You are the user that was granted access to the data collection that is associated with the consumer access. - You are a stakeholder of the data collection for which the consumer access was created. - Your user profile is assigned the Data Marketplace Administrator role or has the **Configure and Manage Data Marketplace** privilege enabled for it in Administrator.

Note: If your Administrator has configured custom attributes in Metadata Command Center for consumer accesses in Data Marketplace, you can view the custom fields in the **Additional Information** section. You can use these fields to specify additional information about the consumer access. For more information, see the *Create custom attributes for items* topic in the *Set Up Data Marketplace* help.

Timeline section

In the **Timeline** section, you can view a summary of the actions and comments on the consumer access with timestamps, and you can also add comments and tag users in your comments.

Note: You can't tag users in comments if the consumer access was not created for you or if you are not a stakeholder with the permissions to view consumer access details.

Consumer information section

The following table describes the fields that you can view in the consumer information section:

Field	Description
For	Name of the Data User that ordered the data collection.
Granted	Date when the Data User received access to the data collection.
Last Updated	Latest date when the consumer access was modified.

Data collection section

In this section, you can view the details of the delivered data collection. To view more details of the data collection that was delivered, hover your pointer over the data collection details section.

Order section

The following table describes the fields that you can view for the order that was used to deliver the data collection:

Field	Description
Usage Context	The context within which the data is used as specified by the Data User at the time of order.
Business Justification	A brief description about how the Data User plans to use the data.
Approved By	Name of the stakeholder that approved the order.
Fulfilled By	Name of the stakeholder that fulfilled the order.

Terms of Use section

In the **Terms of Use** section, you can view the terms of use that apply to the data collection.

Stakeholders section

In the **Stakeholders** section, you can view the names of the stakeholders who are responsible for the ordered data collection.

Switch between page layouts

Your administrator might customize the consumer access details page to display only the information that is pertinent to your organization by creating a different layout for the consumer access page. If you have multiple layout options available to you, you can use **Switch Layout** to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

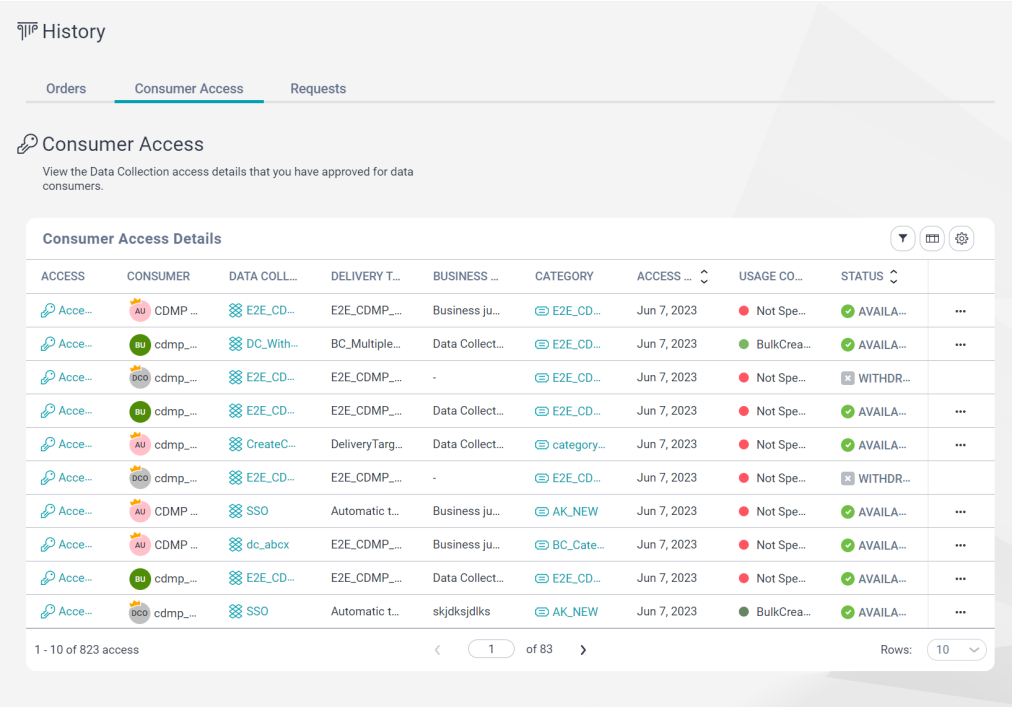

View consumer accesses

On the **History** page, you can view all the consumer accesses in Data Marketplace.

To view consumer accesses on the **History** page, verify the following prerequisites:

- Your user profile is assigned one of the following roles:
  - Data Owner
  - Technical Owner
  - Category Owner
  - Technical Administrator
  - Data Marketplace Administrator
- You are assigned as a stakeholder on a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Approve or Reject Orders**, **Fulfill Or Reject Orders**, **Withdraw Consumer Accesses** or **Configure Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories, consumer accesses, data collections, delivery targets, delivery templates and usage contexts is enabled in Metadata Command Center.

1. Open the **History** > **Consumer Access** page.

2. On the **History** > **Consumer Access** page, you can view the list of consumer accesses.

The following table describes the fields that you can view in the **Consumer Access Details** grid:

Column	Description
Access	Reference identifier for the consumer access.
Consumer	Name of the Data User that ordered the data collection.
Data Collection	Name of the ordered data collection.
Delivery Target	Name of the delivery target used to deliver the data collection.
Delivery Template	Name of the delivery template that was used to create the delivery target.
Business Justification	A brief description about how the Data User plans to use the data.
Category	Name of the category of the data collection.
Access Granted	Date when the Data User received access to the data collection.
Usage Context	The reason for the requirement of access to the data provided by the Data User at the time of order.
Status	Status of the consumer access. A consumer access can have one of the following statuses: - **Available**. The Data User has access to the data collection. - **Pending Withdraw**. A request is submitted to withdraw the Data User's access to the data collection. - **Withdrawn**. The Data User's access to the data collection is withdrawn.
Last Updated	Latest date when the consumer access was modified.
Assigned To	The delegate of the fulfilled order. This field can have one of the following values: - **Me**. The fulfilled order is assigned to you. - **My Group**. The fulfilled order is assigned to your group. - **All**. The fulfilled order is assigned to a user or group whose information is accessible to you.

To filter the consumer accesses that are displayed in the **Consumer Access Details** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter.

For example, if you want to view only the consumer accesses that are available, click **Filter** and select the **Status** filter. In the **Status** filter, select the `Available` status and click **Filter** again to apply it. After you apply the filter, the **Consumer Access Details** grid displays only the consumer accesses that are available.

3. To view the details of a consumer access, click the access ID in the **Access** column.
4. To view the details of a data collection, click the data collection name in the **Data Collection** column.
5. To view the details of a category, click the category name in the **Category** column.

Requesting withdrawal of consumer accesses

As a stakeholder if you determine that a Data User no longer requires access to the data, or as a Data User if you think that you don't require access to the data, you can submit a request to revoke the consumer access from the data collection.

To perform this task, verify one of the following prerequisites:

- The consumer access record is created for your access to the data collection.
- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection that is associated with the consumer access:
  - Data Owner
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection that is associated with the consumer access and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Approve or Reject Orders**, **Fulfill Or Reject Orders**, **Withdraw Consumer Accesses** or **Configure Data Marketplace** privilege is enabled in Administrator.
  - **Read** and **Update** permissions for consumer accesses and data collections are enabled in Metadata Command Center.
  - **Read** permission for categories, delivery targets, delivery templates and usage contexts is enabled in Metadata Command Center.

1. On your **My Data** page, open the consumer accesses for a data collection to which you are granted access or to a data collection for which you are assigned as a stakeholder.

   For more information about the **My Data** page, see the *My Data page* topic in the *Introduction and Getting Started* help.

2. In the **Timeline** section of the consumer access page, click **Request Withdrawal**.

   Optionally, provide a reason for revoking the user's access. You can tag a user to your comment, add `@` to populate the list of users. You can use either the name of the user or the user's email address to search for them.

   Note: Ensure that the user you tagged is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.

   Alternatively, ensure that their user profile is assigned a role for which the following privileges and permissions are enabled:

   - **Access Data Marketplace** privilege is enabled in Administrator.
   - **Read** permission for consumer accesses is enabled in Metadata Command Center.

   Without these privileges and permissions, they won't be able to access your comment despite receiving the notification for it.

After you submit an access withdrawal request, the status of the consumer access changes from **Available** to **Pending Withdraw**. For more information about how a consumer access is withdrawn, see "Withdrawing consumer accesses" on page 75.

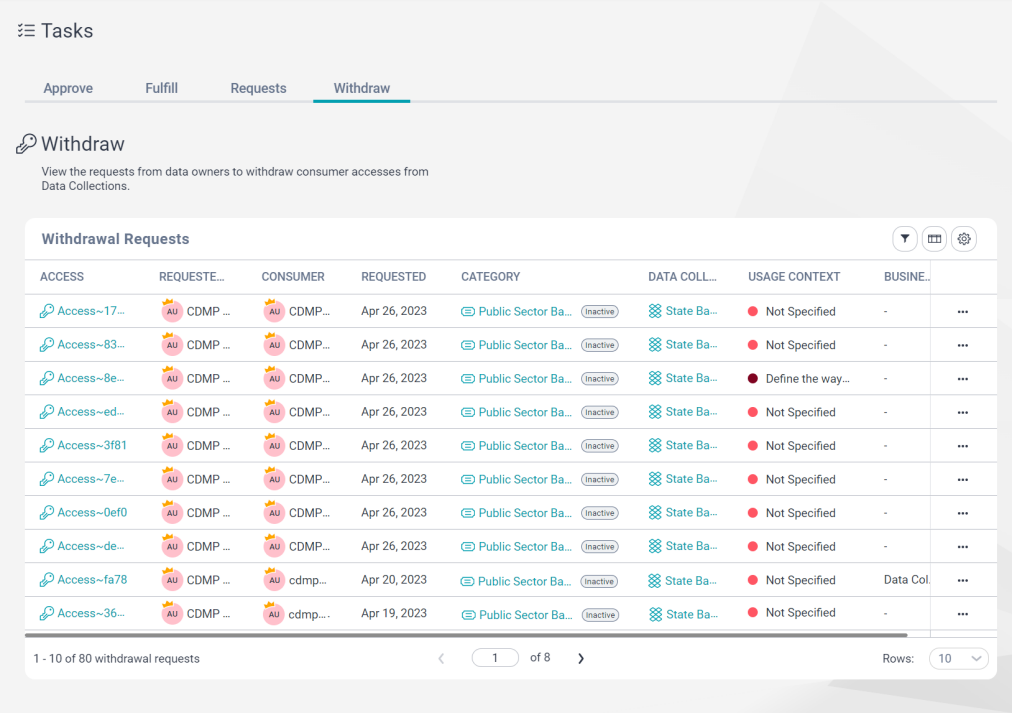

Withdrawing consumer accesses

On the **Tasks** page, you can respond to a request to withdraw a Data User's access to a data collection.

To perform this task, verify the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are assigned as a stakeholder with the Technical Owner stakeholder role on the data collection to which the access is to be revoked.
- You are assigned as a stakeholder on the data collection that is associated with the consumer access and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Withdraw Consumer Accesses** privileges are enabled in Administrator.
  - **Read** and **Update** permissions for consumer accesses and data collections are enabled in Metadata Command Center.
  - **Read** permission for categories and usage contexts is enabled in Metadata Command Center.

1. Open the **Tasks** > **Withdraw** page.

2. On the **Tasks** > **Withdraw** page, you can view all the pending consumer access withdrawal requests.

   The following table describes the fields that you can view in the **Withdrawal Requests** grid:

Field	Description
Access	Reference identifier of the consumer access.
Requested By	Name of the user that requested the access withdrawal.

Field	Description
Consumer	Name of the Data User that has access to the data.
Requested	Date when the access withdrawal request was submitted.
Category	Name of the category of the data collection.
Data Collection	Name of the data collection for which the consumer access is to be withdrawn.
Usage Context	The context within which the data is used as specified by the Data User at the time of order.
Business Justification	Reason for the access withdrawal.
Last Updated	Latest date when the access withdrawal request was modified.
Assigned To	The delegate of the access withdrawal request. This field can have one of the following values: - **Me**. The withdrawal request is assigned to you. - **My Group**. The withdrawal request is assigned to your group. - **All**. The withdrawal request is assigned to a user or group whose information is accessible to you.

To filter the consumer accesses that are displayed in the **Withdrawal Requests** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter.

For example, if you want to view only the consumer accesses that are requested to be withdrawn this month, click **Filter** and select the **Requested** filter. In the **Requested** filter, select `This month` and click **Filter** again to apply it. After you apply the filter, the **Withdrawal Requests** grid displays only the consumer accesses that are requested to be withdrawn this month.

3. To withdraw a Data User's access to a collection, click the Action menu, and select **Withdraw Access**.

   In the **Withdraw Access** dialog box, click **Withdraw Access**. Optionally, you can enter your comments to explain the reason behind the action taken. To tag a user to your comment, add `@` to populate the list of users. You can use either the name of the user or the user's email address to search for them.

   Note: Ensure that the user you tagged is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see the *Predefined roles* topic in the *Introduction and Getting Started* help.

   Alternatively, ensure that their user profile is assigned a role for which the following privileges and permissions are enabled:

   - **Access Data Marketplace** privilege is enabled in Administrator.
   - **Read** permission for consumer accesses is enabled in Metadata Command Center.

   Without the aforementioned privileges and permissions, they won't be able to access your comment despite receiving the notification for it.

4. To cancel a withdrawal request, click the Action menu, and select **Cancel Withdrawal**.

   In the **Cancel Withdrawal** dialog box, click **Cancel Withdrawal**. Optionally, you can enter your comments to explain the reason behind the action taken.

5. Alternatively, you can respond to a withdrawal request from the consumer access page. To do this, open a consumer access. In the **Timeline** section of the consumer access page, click **Withdraw Access**.

   Optionally, you can use the **Add Comment** field to explain the reason behind the action taken.

The status of the consumer access changes from **Pending Withdraw** to **Withdrawn**.
