Read the *Release Notes* to learn about the fixed and known issues for Data Quality.

For information about new features and enhancements, see *What's New*.

Fixed issues

The tables in this section describe recent fixed issues for Data Quality. Note that some releases might not include fixes.

July 2026 fixed issues

There are no fixed issues in this release of Data Quality.

April 2026 fixed issues

Issue	Description
DQC-40768	When you test a rule specification that you configured in advanced mode, the rule logic incorrectly applies case sensitivity to the word 'invalid'.
DQC-40385	For the Verifier transformation, Data Integration did not consider the **Tracing Level** option that you selected and always used the Normal option.
DQC-40250	When you perform duplicate analysis on the Product Name index key for the Product objective, the Deduplicate transformation doesn't create clusters for similar product names in Japanese.
DQC-39484	In a mapping, when you place a Rule Specification transformation immediately after a SQL transformation, the **Preview** panel of the Rule Specification transformation fails to load the data for the transformation.
DQC-39367	When you switch from your account to a sub-organization user that has both session ID and JWT token enabled, you can't select data quality assets in a mapping and you see an error.

Issue	Description
DQC-39342	If you run multiple Verifier mappings in Data Integration, you can download corrupted reference data files and see an error in the session logs for the mapping task.
DQC-39340	If you set *NoPreLoadCountries* and run a Verifier mapping on a Kubernetes cluster in Data Integration, the reference data files do not automatically download in the *ReferenceDataDirectoryPath* location.

October 2025 fixed issues

Issue	Description
DQC-38732	Data Quality enables the **Save** button and throws a validation error in the following scenario: - You search for an input or an output that you haven't selected in a verifier asset. - You search for an input or an output that doesn't exist in the verifier asset.
DQC-38386	The verifier asset inputs and outputs you select are unchecked when you search any of your selected inputs or outputs.
DQC-38488	If you run a mapping that includes a Verifier transformation and consumes IPUs, the Secure Agent does not create a directory for the address verification license file and the mapping fails.
DQC-38472	When you choose `At Sign`, `Dash`, or `Comma` as a custom token delimiter in a Parse asset in pre-built parsing mode, you see some parts of the test result outputs in lowercase.
DQC-38181	When you create a mapping and run the mapping with an asset transformation, the input fields in the target file are not automatically sorted.
DQC-38143	Data Quality fails to throw a validation error if you create a rule specification, configure the default rule statement on the rule specification with no action, and validate the asset.
DQC-37851	Data Quality throws a validation error when you configure a rule specification in advanced mode with a large number of nested rule specifications. The issue is observed when you configure 34 nested rules.
DQC-37835	When you include one or more character spaces in the name of a rule specification and in the name of the primary rule set, Data Quality changes the spaces in the primary rule set name to underscore characters.
DQC-37731	Data Quality fails to throw a validation error in the following scenario: - You configure a rule specification in basic mode with a ROUND(Numeric) custom expression. - You convert the rule specification to advanced mode and you delete the ROUND(Numeric) custom expression. - You validate the rule specification.
DQC-37109	When you pass a child rule set as an argument in a `Least` or `Greatest` function in the rule logic of a rule specification, Data Quality fails to save the rule specification.
DQC-36853	When you run a Verifier transformation advanced mapping in Interactive mode, the mapping fails.

Issue	Description
DQC-36824	When you run an exception task, open the **Job Details** page while the job is in progress, and refresh the page multiple times, the exception data download becomes inactive. During this time, you can't access the exception data.
DQC-35700	When you enable the override option in the properties of a rule specification in advanced mode and you update the string precision value, you can create an input or output with a string precision that is greater than the override value.

Known issues

The tables in this section describe recent known issues for Data Quality.

July 2026 known issues

There are no new known issues in this release of Data Quality.

October 2025 known issues

Issue	Description
DQC-39389	When you rename a data quality asset through the **Rename** option on the **Explore** page, you don't see the updated name in a mapping that uses the asset in Data Integration. **Workaround:** Open the asset and update the name on the **Definition** tab of the asset.
DQC-39115	If you create a rule specification input and output with a hyphen (-) in advanced mode, Data Quality fails to correctly process the rule specifications and you see a validation error.

July 2025 known issues

Issue	Description
DQC-38516	When you search for a user-defined pattern or sort pattern entries in a Parse asset in pre-built parsing mode and you switch to full-screen mode, your search and sort settings are lost. You don't see your settings when you exit full-screen mode.
DQC-38472	When you choose `At Sign`, `Dash`, or `Comma` as a custom token delimiter in a Parse asset in pre-built parsing mode, you see some parts of the test result outputs in lowercase.
DQC-37901	Data Quality throws a validation error in the following scenario: - You create a rule specification in basic mode with a condition that searches for single quotation marks. - You convert the rule specification to advanced mode and validate the rule specification.
DQC-37835	When you include one or more character spaces in the name of a rule specification and in the name of the primary rule set, Data Quality changes the spaces in the primary rule set name to underscore characters.
DQC-37773	When you configure a rule specification with STANDARDIZE and IFF expressions in basic mode and you convert the rule specification to advanced mode, the expressions that you configured don't appear.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
