Preface

Read the *What's New* for a brief overview of new features, enhancements and behavior changes in Data Quality.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

IDMC Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the IDMC Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security, compliance, and privacy practices.

You can access the trust center at https://trust.informatica.com/.

IDMC Pulse Dashboard

The IDMC Pulse Dashboard provides system status and upgrade information for all PODs and services across IDMC.

Follow the services you use and subscribe to alerts to receive notifications about upgrades, maintenance, production incidents, and upcoming releases. The IDMC Pulse Dashboard displays the production status of all the IDMC products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single service or all IDMC services. Subscribing to all services is the best way to be certain you never miss an update.

For more information, see the Service Status and Communications guide.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

July 2026

The following topics provide information about new features, enhancements, and changes in the July 2026 release of Data Quality.

Changelog July 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
July 10, 2026	Initial publication	

New features and enhancements

The July 2026 release of Data Quality includes the following new feature:

New performance optimization option for address verification mappings

You can configure the number of child instances of the address verification engine that the Secure Agent can create at run time for an address verification mapping. To set the number of instances, create the **NumFunctionServers** custom property on the Secure Agent. Set the **NumFunctionServers** value in coordination with other address verification property values on the Secure Agent and with the number of partitions on the mapping Source transformation.

For more information about the performance options, see "Verification properties in the CDQAV property set" in *Data Quality Assets*.

CHAPTER 2

April 2026

The following topics provide information about new features, enhancements, and changes in the April 2026 release of Data Quality.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
April 27, 2026	Updated	"Verification engine upgrade" on page 10
April 10, 2026	Added	"Documentation enhancements" on page 11
April 10, 2026	Added	"Product objective updates in the deduplicate asset" on page 11
March 11, 2026	Initial publication	-

New features and enhancements

The April 2026 release of Data Quality includes the following new features and enhancements.

Watch the following What's New video to learn about the new features and enhancements in the April 2026 release:

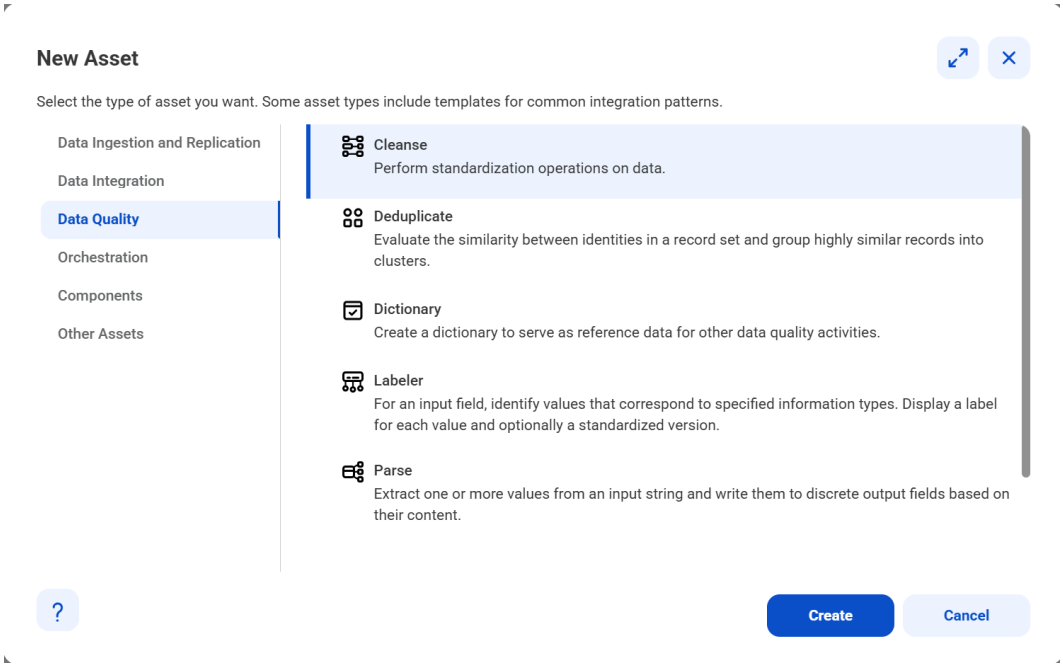

Improved integration with Data Integration

You can create and update the following data quality assets in Data Integration in addition to Data Quality:

- cleanse
- deduplicate
- dictionary
- labeler
- parse
- rule specification
- verifier

The enhanced behavior enables you to create and configure a data quality asset and add it to a transformation in a mapping wholly within Data Integration. The functionality and behavior of the assets and the Data Quality service remain unchanged.

The following image shows the **New Asset** dialog box in Data Integration:

Individual deduplication thresholds for input fields

You can set a custom deduplication threshold for each input field. Use the field-level threshold options to change the emphasis on individual fields within a deduplication process and deliver more precise results in your deduplication projects.

Use the **Manage Field Thresholds** button on the **Deduplication** tab of a deduplication asset to enable custom deduplication thresholds for individual input fields.

For more information about how you can configure custom deduplication thresholds, see the deduplicate asset advanced options in *Data Quality Assets*.

New index keys for deduplicate asset objectives

You can select from a wider range of index keys on several deduplicate objectives in the deduplicate asset. The new keys include an **Exact** value that enables a more precise match with geocode data values, which can result in fewer but more relevant matches.

For more information about the various objectives that you can use in deduplicate assets, see the deduplicate asset objectives in *Data Quality Assets*.

Changed behavior

The April 2026 release of Data Quality includes the following changed behavior.

Verification engine upgrade

The verifier asset, Verifier transformation, and Cloud Address Verification API use version 6.8.0 of the Informatica Address Verification engine. Additionally, the engine now supports up to 2000 API calls per minute while maintaining the same response time.

Previously, the verifier asset, Verifier transformation, and Cloud Address Verification API used version 6.7.0 of the engine.

Product objective updates in the deduplicate asset

The Product Name and Product Description index keys are required fields for the Product objective.

Previously, the Product Name index key was a mandatory field and the Product Description index key was an optional field.

Documentation enhancements

The contents of the following documentation modules are available in the newly created *Data Quality Assets* module:

- *Cleanse assets*
- *Deduplicate assets*
- *Labeler assets*
- *Parse assets*
- *Rule specification assets*
- *Verifier assets*

The *Dictionaries* module is renamed to *Data Quality Dictionaries*.

CHAPTER 3

October 2025

The October 2025 release of Data Quality includes the following updates.

Important notice

The October 2025 release of Data Quality includes the following important notice.

Preview lifted

As of November 2025, API enablement of rule specification assets is production-ready. Previously, this functionality was only available in preview.

For more information, see *REST APIs for rule specifications* in the Rule specifications guide.

New features and enhancements

The October 2025 release of Data Quality includes the following new feature and enhancements.

Public REST API for dictionaries

As of January 2026, we've rolled out an API for data quality dictionary management. You can programmatically create, update, and delete Data Quality dictionaries with the Dictionary API.

For more information about the Dictionary API, see the Data Quality *API Reference*.

After you create a dictionary, you can update or delete it through the Dictionary API or in the Data Quality user interface. To prevent accidental changes to dictionary data, a dictionary cannot accept updates in both environments at the same time. You can change the editing environment for a dictionary when you open it in Data Quality.

For more information about changing the editing environment, see *Dictionaries*.

Reference 360 dictionary reuse in data quality assets

You can select a dictionary that you created in Reference 360 as a dictionary in a data quality asset. When you run a mapping that includes the asset, the mapping applies the dictionary data from Reference 360 to the mapping data. When you maintain a single dictionary with the same data in Reference 360 and Data Quality, you avoid the need to maintain separate dictionaries for the same data in each service.

For more information about how to create a Data Quality dictionary in Reference 360, see *Reference 360* in Reference 360.

Changed behavior

Data Quality includes the following changed behavior.

View Reference 360 dictionary data

As of January 2026, you can view the contents of a dictionary that you create in Reference 360 in Reference 360 and in Data Quality.

Previously, you could view the dictionary contents in Reference 360.

Verification engine upgrade

The verifier asset and Verifier transformation use version 6.7.1 of the Informatica Address Verification engine. Address verification features are unchanged.

Previously, the verifier asset and transformation used version 6.6.0 of the engine.

CHAPTER 4

July 2025

The July 2025 release of Data Quality includes the following updates.

Important notices

The July 2025 release of Data Quality includes the following important notice.

Preview initiated

Effective in the July 2025 release, API enablement of rule specification assets is available for preview.

Note: Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

For more information about new features and enhancements, see “New features and enhancements” on page 15.

New features and enhancements

Watch the following What's New video to learn about the new features and enhancements in the July 2025 release:

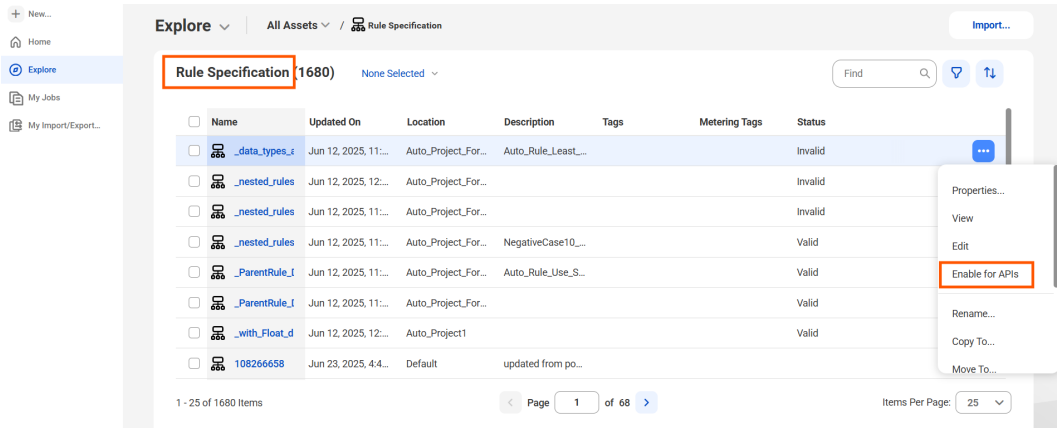

Data Quality includes the following new features and enhancements.

Public REST APIs for rule specification assets

You can expose a rule specification asset as an API and design a custom endpoint for the API. To enable a rule specification as an API and design a custom API endpoint, import the rule specification to API Center. When you publish an API endpoint through API Manager, you can invoke the endpoint and integrate the rule specification capabilities with your application.

The following image shows how to enable a rule specification asset for API:

For more information about how to enable a rule specification asset for APIs, see the *Rule specification assets* help.

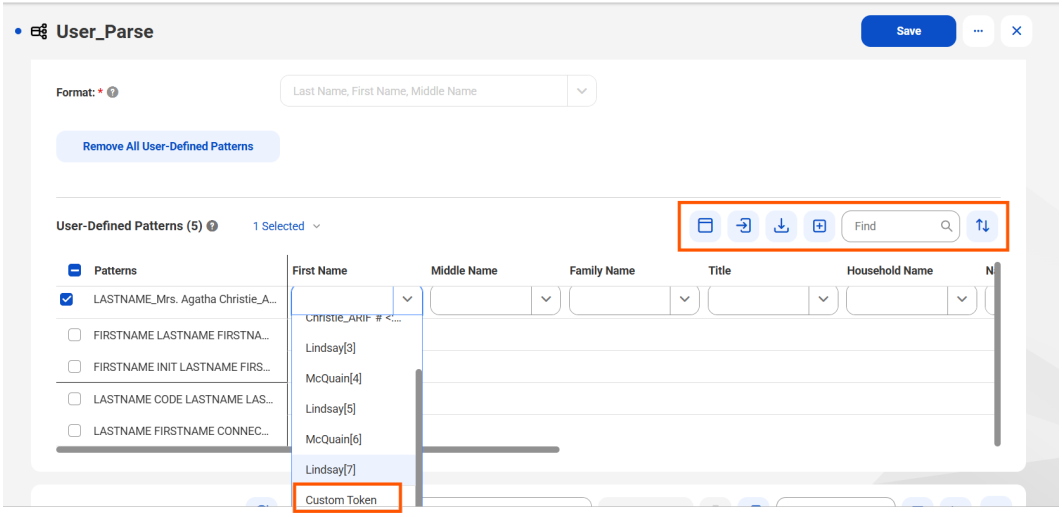

For more information about how to design a custom endpoint for the API, see the *API Center* help.

Enhancements to parse assets

The July 2025 release includes the following enhancements to user-defined patterns in pre-built parsing mode:

- You can assign multiple patterns to a single output field. Use the **Custom Token** option on the output field to assign the patterns.
- You can import a pattern.
- You can download a pattern as a Microsoft Excel file.
- You can add a row to a pattern, and you can sort the rows in your pattern by the output column names.
- You can switch to full-screen mode while you define a pattern.

The following image shows the new user-defined pattern options in pre-built parsing mode:

For more information on parse assets, see the *Parse assets* help.

Source control

You can compare two versions of a source-controlled asset from the **Explore** page. You can compare the current version to an older version or compare two older versions.

For more information, see *Asset Management*.

Changed behavior

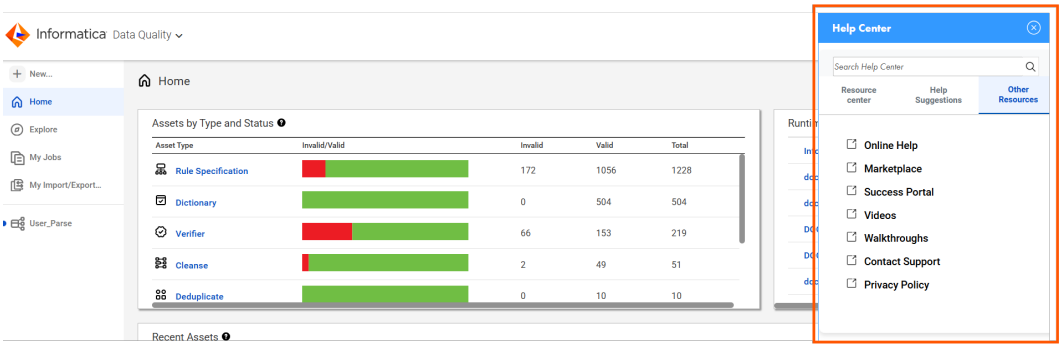

Data Quality includes the following changed behavior.

Changes to Data Quality Help menu options

You'll see the Help menu options organized in three tabs. Access videos, walkthroughs, product guidance, events, and more on the **Resource Center**, **Help Suggestions**, and **Other Resources** tabs of the Data Quality Help menu. You'll find the product online help on the **Other Resources** tab.

Previously, you accessed all product content from a single list on the Help menu.

The following image shows the improved Help menu options:

CHAPTER 5

April 2025

The April 2025 release of Data Quality includes the following updates.

New features and enhancements

Watch the following What's New video to learn about the new features and enhancements in the April 2025 release:

The April 2025 release of Data Quality includes the following new features and enhancements.

Data Quality bundle for life sciences

As of May 2025, we've rolled out a bundle of assets for data in life sciences as part of the April 2025 release.

The bundle includes mapplets and other assets, including assets that evaluate Hierarchical Condition Category codes, National Drug Code numbers, National Provider Identifier numbers, and International Classification of Diseases codes.

For more information about the life sciences bundle, see the *Data Quality accelerator bundles* help.

Notifications

Notifications have the following enhancements:

- In the notifications tray, related notifications are now grouped and collapsed under the first item. You can expand a group to view all notifications.
- Users with the privilege *Manage user notifications* can configure whether users in their organization receive email notifications. They can set the default behavior for new users and override the setting for all users. The Admin role has this privilege by default.
- The product filtering option in the notifications tray no longer appears in services where filtering isn't available.

For more information about Notifications, see the *Administrator* help.

Metering tags

Metering tags allow you to organize and manage your cloud resources more effectively by allowing you to view consumption metrics at the asset level.

For more information about Metering tags, see the *Administrator* help.

Source control

You can use a cloud-hosted GitLab repository for source control.

Changed behavior

Data Quality includes the following changed behaviors.

Verification engine upgrade

The verifier asset and Verifier transformation use version 6.6.0 of the Informatica Address Verification engine.

Previously, the verifier asset and transformation used version 6.5.0 of the engine.

Support for deduplicate asset tests without mandatory and required fields

You can test the configuration of a deduplicate asset without populating the mandatory and required fields that the deduplication objective specifies.

Previously, you had to populate the mandatory and required fields before testing the configuration of the asset.

For more information about Mandatory, required, and optional fields, see the *Deduplication Asset* help.

CHAPTER 6

February 2025

The February 2025 release of Data Quality includes the following updates.

New features and enhancements

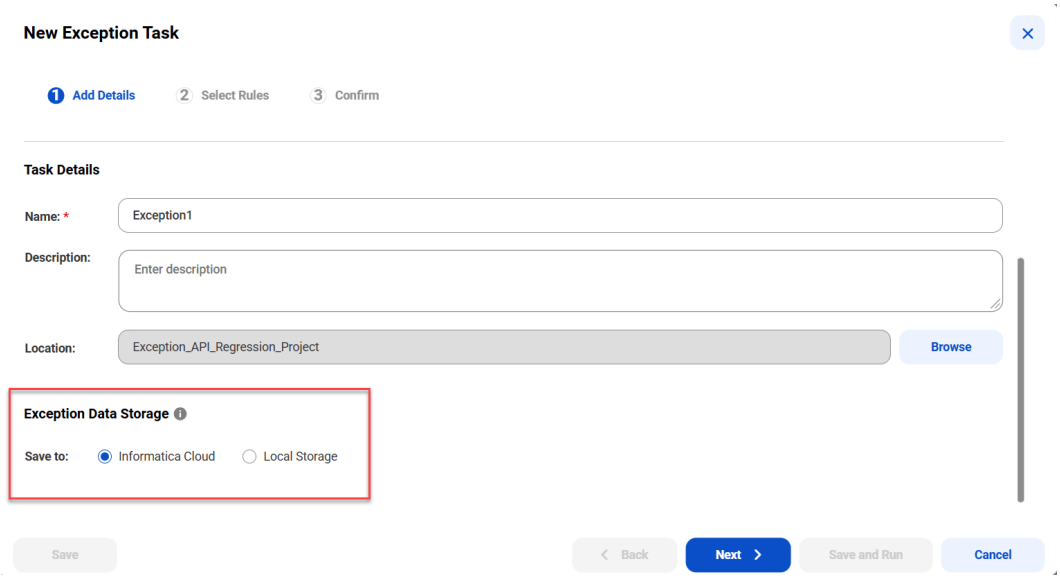

Data Quality includes the following new features and enhancements.

New storage options for exception task data

You can configure an exception task to write the results of an exception task job either to your local system or to Informatica's cloud storage. In earlier release, an exception task wrote job results data exclusively to Informatica's cloud storage.

When you opt to store job data on your local system, the exception task writes the results to a comma-separated file to the flat file connection that the Secure Agent can access. Informatica does not impose a limit on the quantity of data that the exception task writes to the file.

The following image shows the new storage options for exception task data:

For more information about the exception task configuration options, see the *Exception Management* help.

CHAPTER 7

November 2024

The November 2024 release of Data Quality includes the following updates.

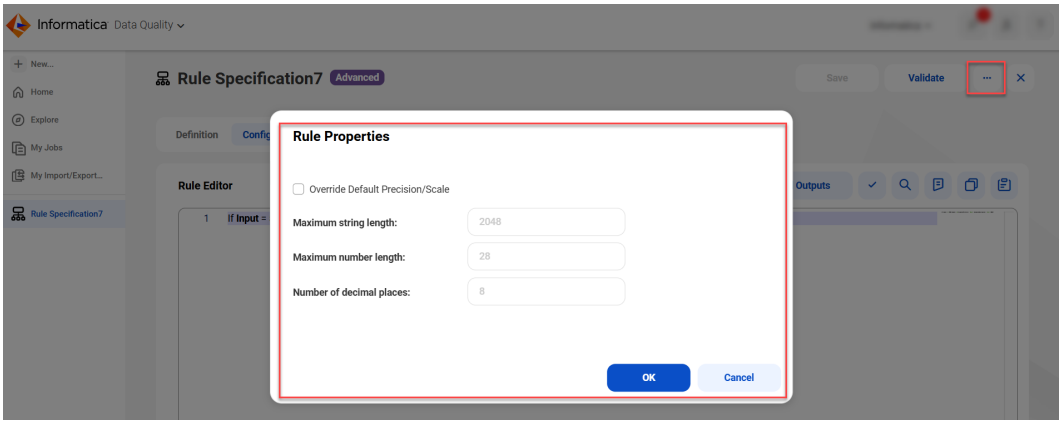

New features and enhancements

Data Quality includes the following new features and enhancements.

Rule specification properties in advanced mode

You can define the data properties for an output on a rule set in advanced mode. Find the properties in the **Rule Properties** dialog box, which you can open from the toolbar.

The following image shows the rule specification properties in advanced mode:

For more information about Rule specification properties in advanced mode, see *Rule specification assets* help in Data Quality.

Custom dimensions in Data Quality assets

Custom dimensions that users create in Metadata Command Center now appear in Data Quality assets along with the built-in data quality dimensions. If a custom dimension is updated in Metadata Command Center, the updated dimension appears in Data Quality. If a dimension is deleted in Metadata Command Center, you'll see a warning message when you review a Data Quality asset that uses the deleted dimension.

For more information about dimensions, see *Introduction* help in Data Quality.

New source system objects for exception management

You can perform exception management tasks on the following source objects:

- SAP ECC
- Databricks Delta

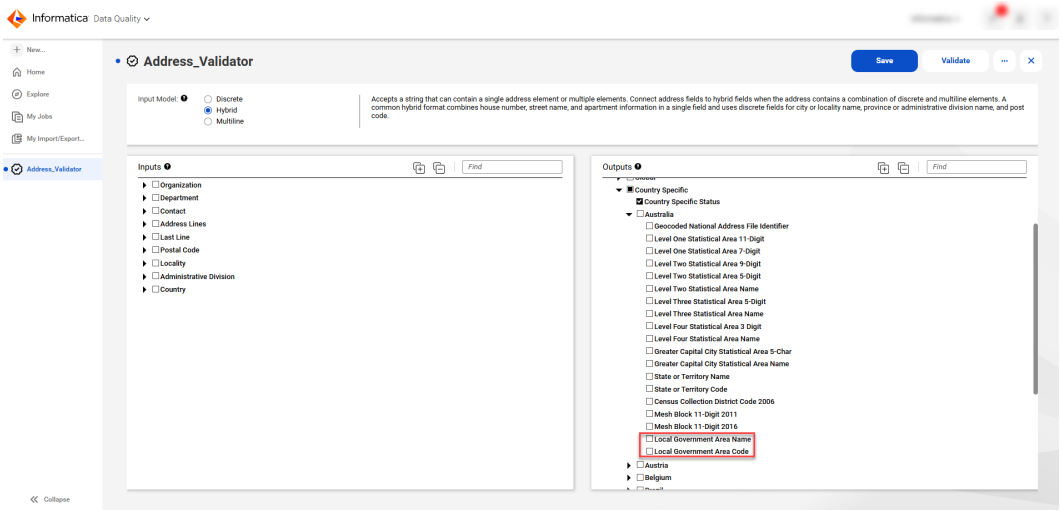

Verifier assets

The November release includes the following enhancements to verifier assets:

New enrichments for Australia addresses

Address verification can identify the Local Government Area in which an Australian address is located. To identify the Local Government Area, select the Local Government Area Name and Local Government Area Code output fields in the verifier asset. The address verification reference data for Australia includes the Local Government Area information.

The following image shows the new enrichments for Australia addresses:

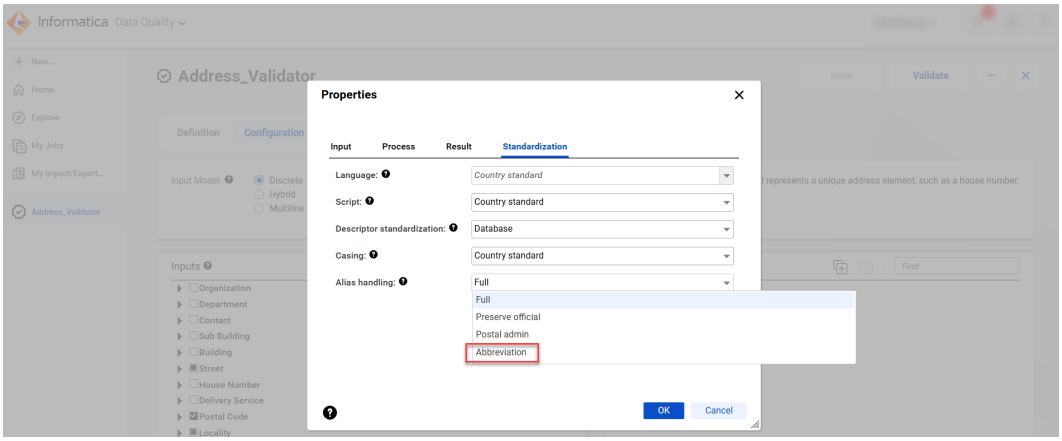

For more information about enriched address outputs for Australia addresses, see the *Verifier assets* help in Data Quality.

New alias handling option

You can return the alias for an address element in its abbreviated form if the reference data contains the abbreviation. To return the abbreviated alias, select **Abbreviation** in the **AliasHandling** property.

The following image shows the new alias handling option in the standardization properties of a verifier asset:

For more information about alias handling options, see the *Verifier assets* help in Data Quality.

Changed behavior

Data Quality includes the following changed behavior.

Updates to email notifications for exception management

The email notification for an exception management job lists the rule specifications that identify data quality issues based on the priority level assigned to the issues.

The email lists up to ten rule specifications for each of the following priority levels:

- Critical
- Major
- Minor

Previously, the email notification contained a single list of rule specifications and didn't identify the priority that a rule specification assigned to an issue.
