Abstract

You can use Microsoft Excel to create glossary content for business glossaries. The Microsoft Excel file that contains the business glossary data must be in a format that the Analyst tool can import. This article describes how to generate a .xlsx file, edit the file in Microsoft Excel, and import the file to the Analyst tool.

Supported Versions

- Informatica Power Center 9.6.1 HotFix 4
- Informatica Data Quality 9.6.1 HotFix 4
- Informatica Enterprise Data Catalog 10.2.2

Overview

You can use Microsoft Excel to populate the content of a new glossary that you create in the Analyst tool. Usually, you create and publish the business terms, categories, and policies after you create them in the Analyst tool. However, if you do not wish to use the Analyst tool to create the content for a glossary, you can use Microsoft Excel after you export the glossary from the Analyst tool to a .xlsx file.

You can customize the glossary after you create the glossary in the Analyst tool. The Analyst tool records the customization that you made to the glossary in the .xlsx file. The .xlsx file contains multiple worksheets. Follow the recommendations in this article to edit the worksheets.

After you edit the worksheets, you can import the .xlsx file to the Analyst tool. The Analyst tool updates the business glossary with the content from the .xlsx file. The content that you import is in the draft phase. Informatica recommends that you use the approval workflow or create a business initiative in the Analyst tool to publish the imported Glossary assets.

Steps Required to Create Glossary Content Using Microsoft Excel

This topic lists the steps required to create glossary content using Microsoft Excel.

1. **Create the glossary in the Analyst tool.** Before you create Glossary assets, you must create the glossary in the Analyst tool. A glossary is a collection of business initiatives, business terms, categories, and policies.

2. **Customize the glossary in the Analyst tool.** You can customize a glossary by editing the glossary template. Use the template to edit default properties, create properties, create custom relationships, or change the sections where the properties appear.
3. **Create a sample business term, policy, category, synonym, and rule intent.** If you create sample assets in the Analyst tool, the export file will contain the columns corresponding to these assets.
4. **Export the glossary to an .xlsx file.** Export the glossary to a .xlsx file. The Analyst tool includes the customisation that to you made to the template.
5. **Populate the .xlsx file using Microsoft Excel.** Create business terms, categories, and policies in the .xlsx file. Specify the properties for the Glossary assets using the worksheets in the .xlsx file.
6. **Import the .xlsx file.** Import the .xlsx file to the Analyst tool to import the Glossary assets that you created in the .xlsx file.

Creating a Glossary in the Analyst Tool

Create a glossary in the **Glossary** workspace. Configure the glossary properties when you create a glossary.

1. From the **New** menu, select **Glossary**.

   The glossary panel opens in the **Glossary** workspace.
2. Configure properties to create the glossary.
3. Choose to save the glossary.
   - To save the current configuration and continue the task later, click **Save and Continue**. The Analyst tool creates a glossary with the current information and displays the glossary in edit mode.
   - To complete the task, click **Save and Finish**. The Analyst tool creates a glossary and displays the glossary in read mode.

Creating Properties

You can create a custom Glossary asset property after you save the glossary. The property that you create is available across all glossaries. You or another glossary administrator can use the custom property in the glossary template to customize a glossary.

1. Open the glossary where you want to create a property.
2. Click **Edit**.
3. Click the **Business Term Template**, **Policy Template**, **Category Template**, or **Business Initiative Template** panel.
4. In the **Available Business Term Template Properties** panel, click the **Add** icon.
5. In the **Property Model** and **Property Label Definition** panels configure the properties.
6. Click **Save**.
7. Click **Save and Finish** to save the glossary.

Customizing Properties

Change the label and position of the asset properties to customize the glossary template. You can change the default property or custom property that another glossary administrator created. The Analyst tool applies the changes to the properties in the current glossary.

1. Open the glossary that contains the default property that you want to edit.

2. Click **Edit**.
3. Click the **Business Term Template**, **Policy Template**, **Category Template**, or **Business Initiative Template** panel.
4. Click the property that you want to edit.

   Options to edit or move the property appear.
5. Click the **Edit** icon.
6. In the **Available Business Term Template Properties** panel, change the properties under the **Property Label Definition** and **Property Model** panels.
7. Optionally, use the arrows to move the property.
8. Click **Save**.

Creating Custom Relationships

Create a custom relationship in the business term page to customize a glossary. Content managers can use the custom relationship when configuring related terms in the business term.

1. Open the glossary where you want to create a custom relationship.
2. Click **Edit** to edit the glossary.
3. Click the **Business Term Template** tab.
4. Click the **Related Assets** property.
5. Click the **Edit** icon.

   The options to create a custom relationship appears in the **Available Business Term Template Properties** panel.
6. In the **Relationship values** section, click the **Add** icon.
7. Define the custom relationship name.
8. Click **Save**.

Changing the Glossary Asset Layout

Change the Glossary asset layout after you save the glossary. When you change the layout, you customize how the Glossary asset page appears to glossary consumers.

1. Open the glossary which you want to customize.
2. Click **Edit** to edit the glossary.
3. Click the **Business Term Template**, **Policy Template**, **Category Template**, or **Business Initiative Template** panel.
4. Select the property that you want to move.
5. Use the arrows to move the property.
6. Optionally, click the **Delete** icon to remove the property from the page. You can remove custom properties and not default properties.
7. Click **Save**.

Exporting Assets and Templates

You can export Glossary assets and templates for a single glossary or multiple glossaries. The export is in .xlsx format

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Glossaries**.
3. Right-click a glossary, and click **Export**.

   The **Export** dialog box appears.
4. In the **Select Glossaries** page, choose the glossary you want to export.
5. In the **View Summary** step, verify the export details.
6. Click **Export**.
7. Select a location on your computer where you want the Analyst tool to download the export file.

Editing the Export File

Edit the .xlsx export file using Microsoft Excel. You can add Glossary assets and specify the properties in the worksheets that are visible. Informatica does not recommend that you edit the worksheets that are hidden by default.

The following table describes the visible worksheets in the export file:

Worksheet	Description
Home Page	Descriptions about the export file content. The worksheet contains hyperlinks to the worksheets.
Categories	The categories that you exported. Use this worksheet to edit the values of category property details. Informatica recommends that keep the phase of the categories as Draft. **Note:** The users that you assign as data stewards, stakeholders, or owners to categories must exist in Informatica Administrator.
Terms	The business terms that you exported. Use this worksheet to edit values of the business term property details. Informatica recommends that keep the phase of the business terms as Draft. **Note:** The users that you assign as data stewards, stakeholders, or owners to business terms must exist in Informatica Administrator.
Policies	The policies that you exported. Use this worksheet to edit values of the policy details. Informatica recommends that keep the phase of the policies as Draft. **Note:** The users that you assign as data stewards, stakeholders, or owners to policies must exist in Informatica Administrator.
Initiatives	The business initiatives that you exported. Use this worksheet to edit values of the business initiative property details. Informatica recommends that keep the phase of the business initiatives as Draft. **Note:** The users that you assign as data stewards, stakeholders, or owners to business initiatives must exist in Informatica Administrator.
Rules	Details about rules and their relationships with policies and business terms. Optionally, use this worksheet to add a rule that glossary administrators can link to terms in the Analyst tool.
Synonyms	The synonyms that you exported. Use this worksheet to edit values of the synonym property details.

Worksheet	Description
Glossaries	Details, such as name, ID, and description about glossaries that you exported.
AssetLinks	Details about linked assets and their relationship with business terms. Optionally, use this worksheet to edit asset link properties or add a new asset link. Content managers can link the assets to the terms in the Analyst tool.

The following table describes the hidden worksheets in the export file:

Worksheet	Description
Global Attributes	All the business term and policy properties. Optionally, use this worksheet to create properties that glossary administrators can use in the Glossary asset and business initiative templates.
Global Relationships	All the business term relationship properties. Optionally, use this worksheet to create custom relationships that glossary administrators can use in the **Related Terms** attribute.
Term Templates	Details about the business term template. Do not edit columns in this worksheet. To modify the term template, use the Analyst tool.
Policy Templates	Details about the policy template. Do not edit columns in this worksheet. To modify the policy template, use the Analyst tool.
Category Templates	Details about the category template. Do not edit columns in this worksheet. To modify the category templates, use the Analyst tool.
Initiative Templates	Details about the business initiative template. Do not edit columns in this worksheet. To modify the business initiative template, use the Analyst tool.

Importing a Glossary

Use the import wizard to import Glossary assets or templates to the Analyst tool. Information about the Glossary assets and templates that you want to import must be in an .xlsx or .zip file. You can run only one import task at a time.

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Glossaries**.
3. Right-click a glossary, and click **Import Assets and Templates**.

   The **Import** wizard appears.
4. Click **Browse** to select an .xlsx or .zip file that contains Business Glossary data.
5. Click **Next**. If you see an error message, review the details in the log file, and start the import process again.
6. Specify if you want to include attachments, linked assets from other glossaries, and the audit trail in the **Specify Settings** page and click **Next**.
7. Select the Glossary assets you want to import based on the categories in the **Select Assets** page, and click **Next**.

   The Analyst tool displays a summary of data in the .xlsx file.
8. If the Analyst tool detects that you are importing duplicate assets, you see options to resolve the conflict. Make a selection from the available options.
9. Optionally, review the summary of assets to be imported and details about the assets you selected to import.
10. Click **Import**.
