Overview

Enterprise Data Catalog Tableau Extension is a native extension for Tableau dashboard that you can use within Tableau. Use Enterprise Data Catalog Tableau Extension to quickly access the contextual business and metadata information on assets from Tableau.

You can use Enterprise Data Catalog Tableau Extension in Tableau Desktop, Tableau Server, and all the web browsers that Tableau supports. You can download the extension from the Enterprise Data Catalog application, and add the extension to a dashboard in Tableau. The tableau assets include workbooks, worksheets, and dashboards.

Enterprise Data Catalog Tableau Extension displays specific asset details for each type of a Tableau asset. For example, if you view a Tableau report in the extension, the extension displays the details, such as the description of the report, business title associated with the report, people associated with the report, and data sources of the report.

You can use the Enterprise Data Catalog Tableau Extension to search for an asset based on the name, or perform a wildcard search to find all the catalog assets. You can use the filter and sort options to refine your search. You can also collaborate on workbooks by adding reviews, ratings, and questions within the extension. To get a comprehensive view of the asset, you can launch the Enterprise Data Catalog application from the Enterprise Data Catalog Tableau Extension to display the Overview tab or the lineage and impact view.

The following are users who use the Enterprise Data Catalog Tableau Extension:

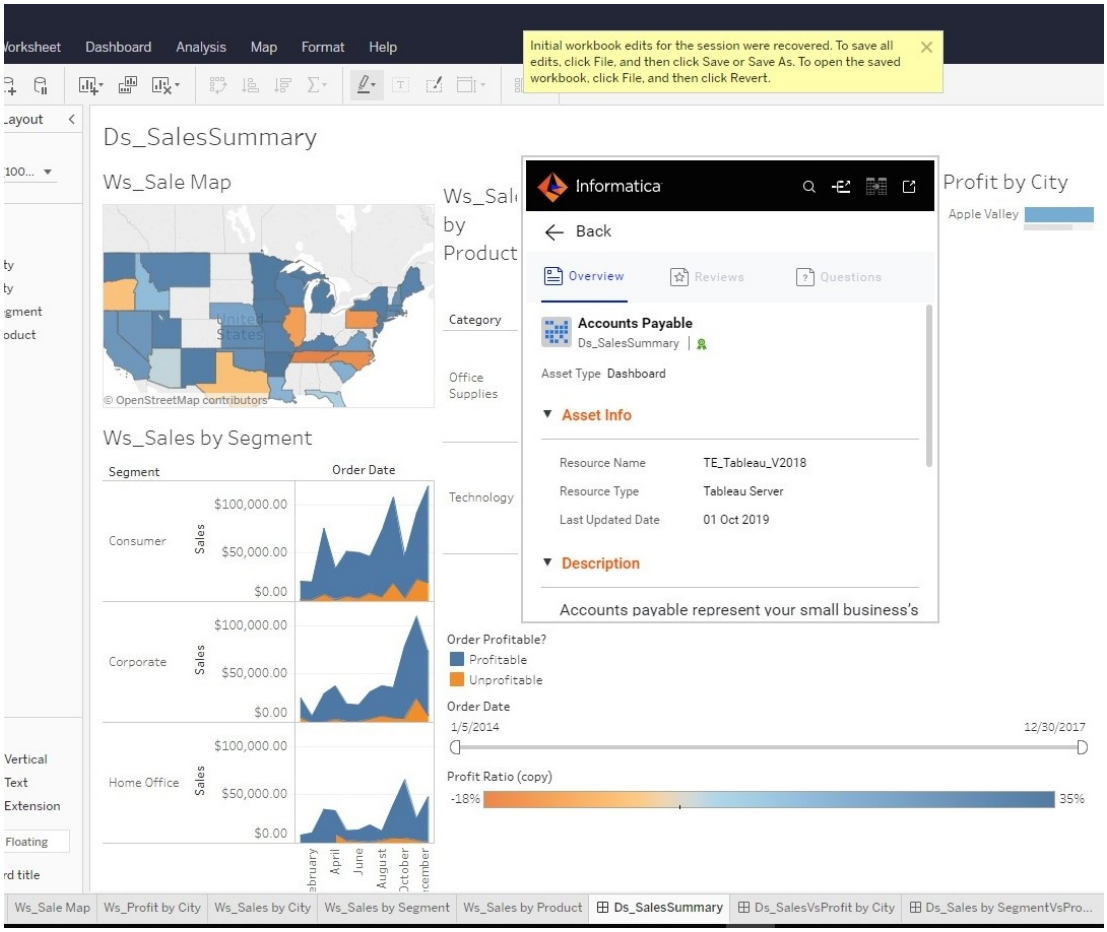

Report authors

The report author adds the extension to the Tableau dashboard object from the Tableau Desktop, and then publishes it to the Tableau server.

Business users

The business user views the asset details of the report data in the extension within the Tableau dashboard.

The following image displays the sample Enterprise Data Catalog Tableau Extension that is added to a Tableau dashboard:

Tutorial Example

You are a business user who views Tableau reports to prepare a report on business activities of your organization. You spend most of your time understanding the different integrated systems to view the details of the reports. You need to find out more about the contextual business and metadata information about the reports and view technical assets that are associated with the reports so that you can understand the reports better.

The following table lists the challenge you might come across and the possible solution that you achieve using the Enterprise Data Catalog Tableau Extension:

Challenge	Solution
Tableau Server or Client does not display contextual business and metadata information about the reports.	You can configure the Enterprise Data Catalog Tableau Extension within the Tableau Server or Client to discover and understand relevant data within the context of the Tableau dashboard report. You also use the data discovery and collaboration capabilities within Informatica Enterprise Data Catalog to find and understand the relevant data integrity.

In this tutorial, you will complete the following lessons:

Lesson	Description
Download the Enterprise Data Catalog Tableau Extension	Download the Enterprise Data Catalog Tableau Extension from Enterprise Data Catalog application.
Add the Enterprise Data Catalog Extension to the dashboard	Add the .trex file to configure the extension for a dashboard in Tableau.
Configure the Enterprise Data Catalog Extension	Enter the Enterprise Information Catalog login credentials to start the extension.
View the **Overview** tab of the report	View the Tableau assets in the Enterprise Data Catalog Tableau Extension. The Extension displays business context and asset information after you add and configure the extension in Tableau.
Search for Tableau Assets using the extension	Search for an asset based on the name, or perform a wildcard search to find all the catalog assets.
Collaborate using reviews and questions	Collaborate on workbooks and tables by adding reviews and questions within the extension.

Prerequisites

Before you configure and use Enterprise Data Catalog Tableau Extension, contact your administrator and make sure that you complete the following prerequisites:

- Enterprise Data Catalog is installed.
- Access to Enterprise Data Catalog version 10.2.2 HotFix 1 or later.
- Access to Tableau Server and Tableau Desktop version 2018.2 or later.
- If you want to open Enterprise Data Catalog Tableau Extension in Tableau Desktop, ensure that Enterprise Data Catalog is deployed on an SSL-enabled cluster with a valid SSL certificate.
- In the Catalog Administrator, make sure that the administrator has performed the necessary administrative tasks, such as creating the required resources for the relevant Tableau asset, Business Glossary, Axon, and domain users. Create these resources to view Tableau assets, business terms, and related people in the extension. To view the lineage and impact information, make sure that the administrator has configured the related resources and connection assignment settings.
- If you upgrade from an existing version to the latest version of Enterprise Data Catalog, you must re-run an existing Tableau resource before you can view it in the extension.

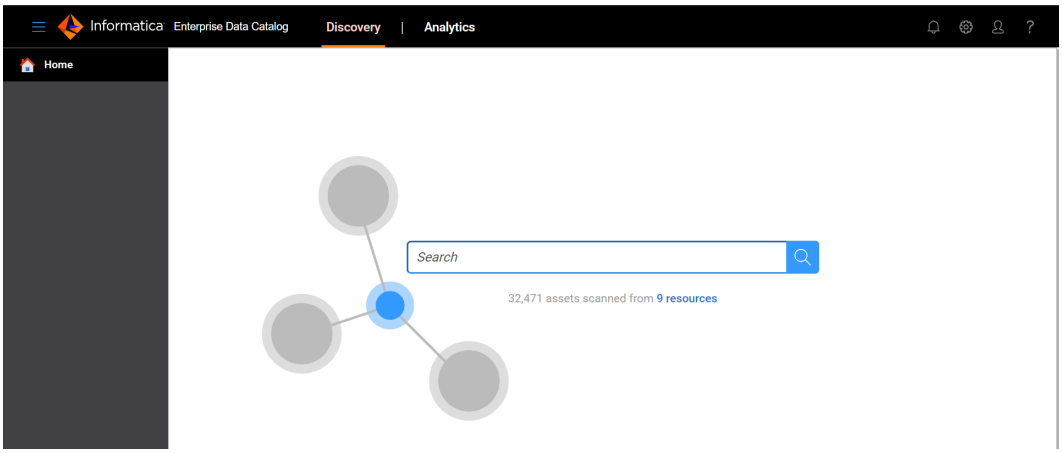

For more information on Enterprise Data Catalog configuration, see the *Catalog Administrator Guide*.

Lesson 1: Download the Enterprise Data Catalog Tableau Extension

In this lesson, you will learn how to download the Enterprise Data Catalog Tableau Extension from Enterprise Data Catalog application.

1. Log in to Enterprise Data Catalog using the credentials.

   The Enterprise Data Catalog home page appears with the search box.

2. In the Enterprise Data Catalog header, click the user ( ) icon.

   The menu appears.

3. Select the **Download Tableau Extension** option from the menu as shown in the following image:

   Enterprise Data Catalog downloads the .trex file to your machine.

Lesson 2: Add the Enterprise Data Catalog Extension to the Dashboard

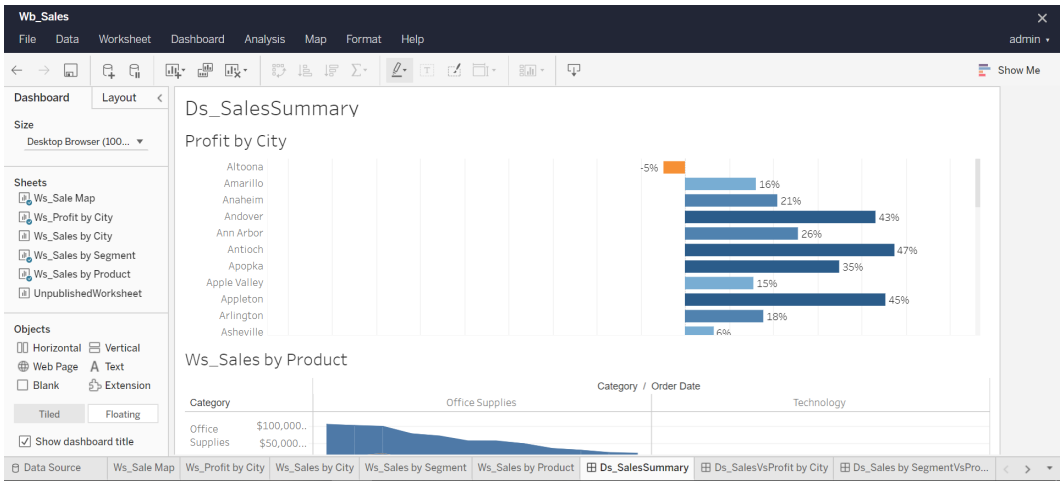

After you download the .trex file to your machine, add the .trex file to Tableau and configure the extension for a dashboard. In Tableau Desktop or Tableau Server, add the extension to a dashboard in edit mode.

In this lesson, you will learn how to add the extension to the dashboard.

1. In Tableau, open a dashboard to which you want to add the extension.
2. In the toolbar, click the edit (Edit) icon to open the dashboard as shown in the following image:

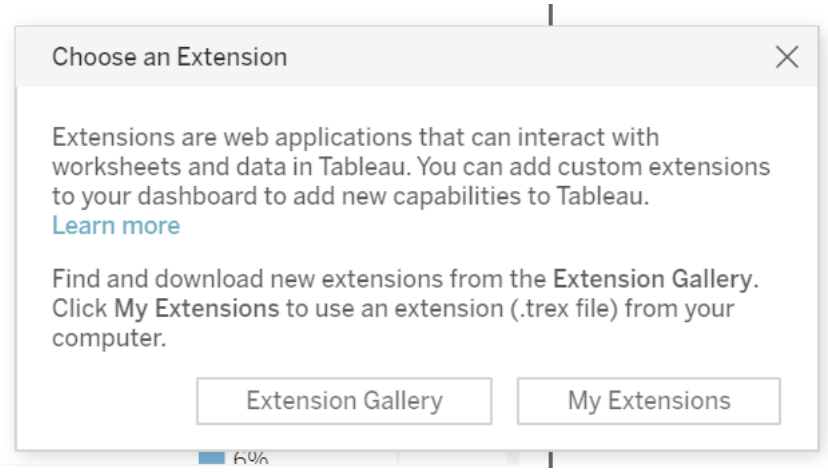

The dashboard opens in edit mode as shown in the following image:

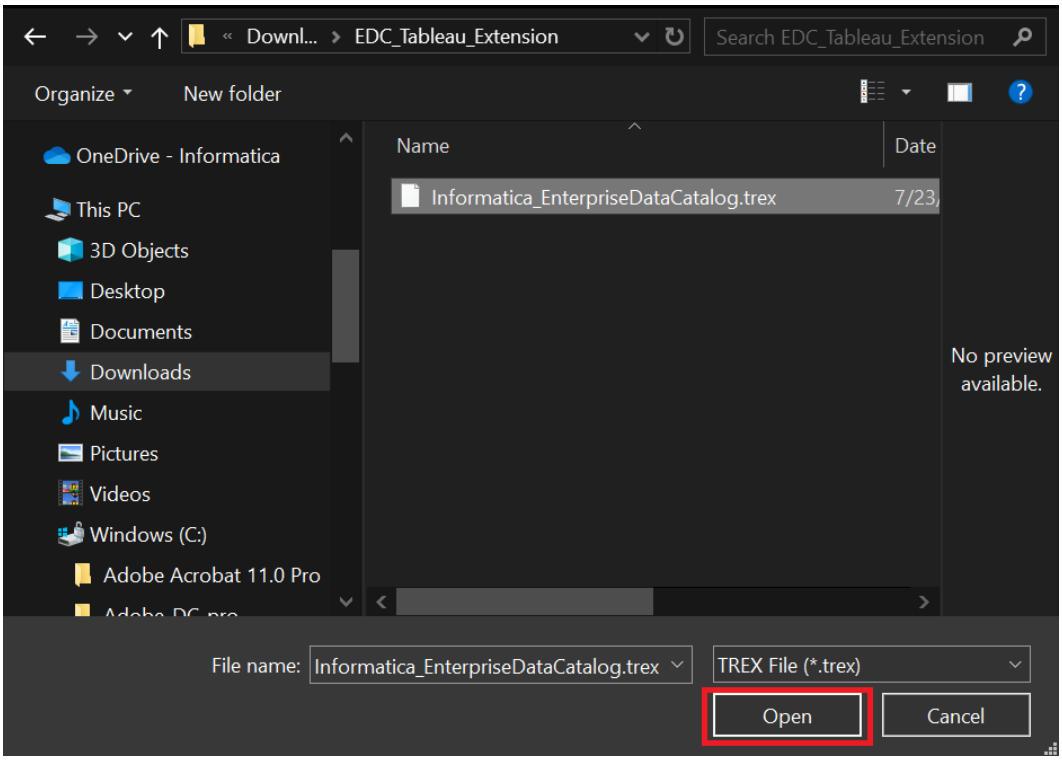

3. In the **Objects** section of the dashboard, double-click **Extension**.

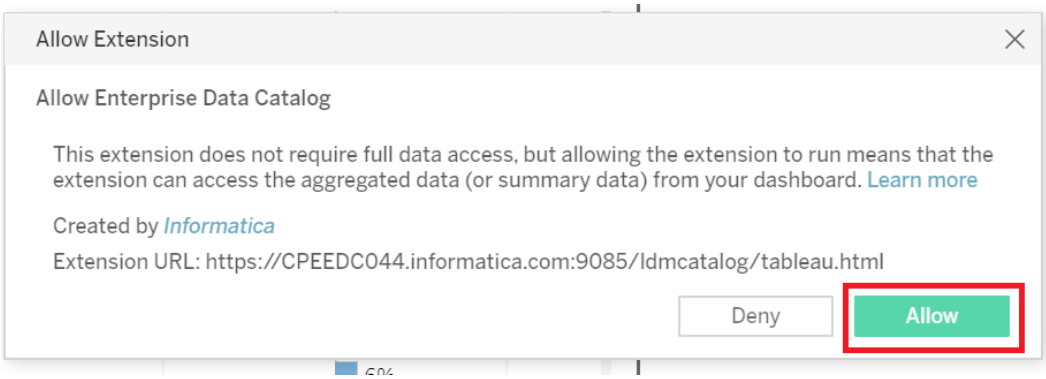

The **Choose an Extension** wizard appears as shown in the following image:

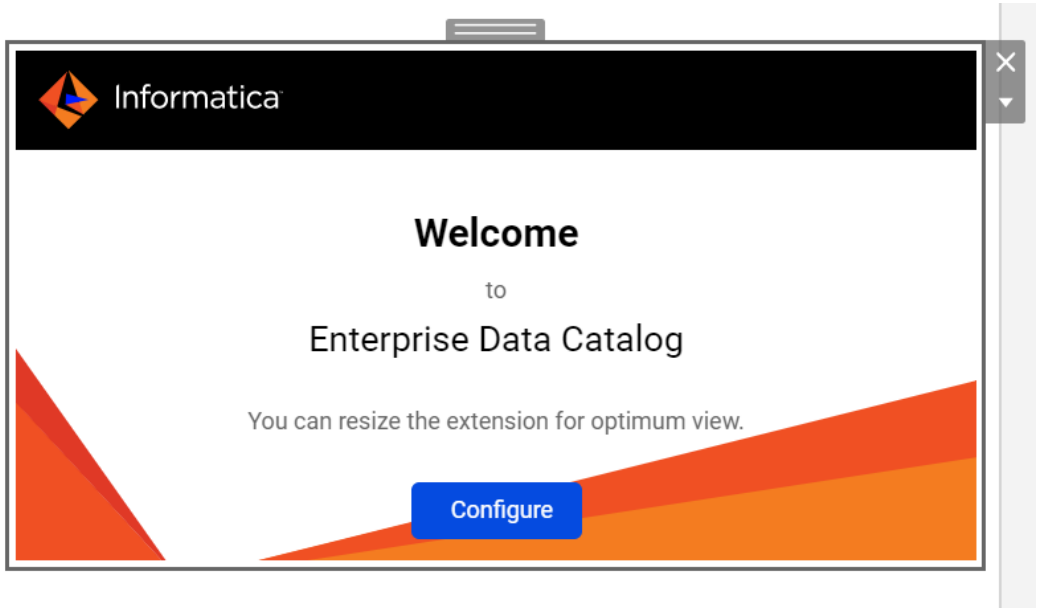

4. In the **Choose Extension** wizard, click **My Extensions**.
5. Browse to the .trex file in your locale machine, and then select the file.
6. Click **Open**.

7. If prompted, click **Allow** to provide the extension access to the Tableau dashboard.

The **Enterprise Data Catalog Tableau Extension** launches in Tableau as shown in the following image:

Note: After you add and save the extension to a dashboard in edit mode, you cannot remove the Enterprise Data Catalog Tableau Extension from the dashboard in view mode. However, you can search for assets and view the asset information.

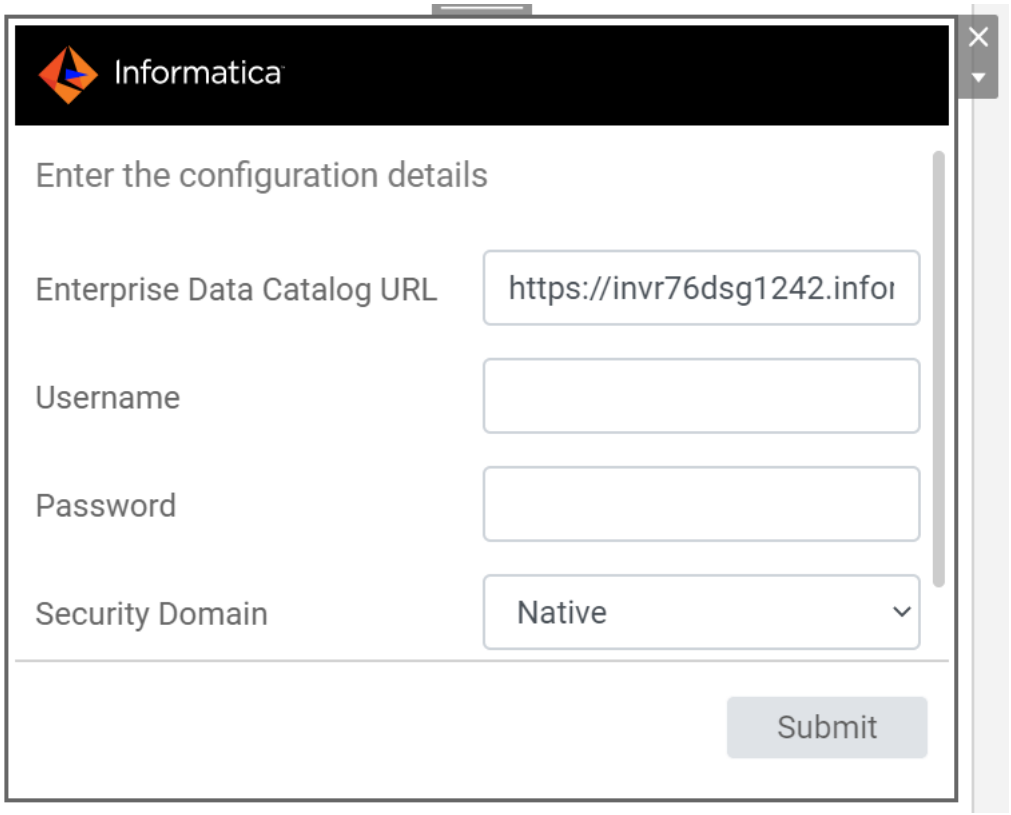

Lesson 3: Configure the Enterprise Data Catalog Extension

After you download and add the Enterprise Information Catalog Tableau Extension, you must enter the Enterprise Information Catalog login credentials to start the extension.

In this lesson, you will learn how to configure the extension.

1. In the **Informatica Enterprise Data Catalog Tableau Extension** window, click **Configure**.

   The **Enterprise Data Catalog Tableau Extension** configuration dialog box appears.

2. Enter the following properties for the connection:
   - **Enterprise Data Catalog URL**. Enterprise Data Catalog application URL from where you download the .trex file. The URL is populated in the extension. The URL is in the following format: `http[s]://<host>:<port>/ldmcatalog`

     Note: Do not change the URL in the extension.
   - **Username**. User name to log in to the Enterprise Data Catalog Tableau Extension.
   - **Password**. Password to log in to the Enterprise Data Catalog Tableau Extension.
   - **Security Domain**. Name of the Security Domain.
3. Optionally, to save the login credentials, select the **Remember** check box.
4. Click **Submit**.

Lesson 4: View the Overview Tab of a Report

You can view all Tableau assets in Enterprise Data Catalog Tableau Extension. The extension displays business context and asset information of the report in Tableau.

In this lesson, you will view the dashboard asset details in the extension.

The following image displays a sample dashboard **Overview** page:

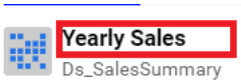

Enterprise Data Catalog Tableau Extension displays the following details for a Tableau asset:

Associated business term

The extension displays the business term that you associate in Enterprise Data Catalog. You can associate a business term to a technical asset that has a cryptic name to make the asset easier for users to understand and identify in the catalog.

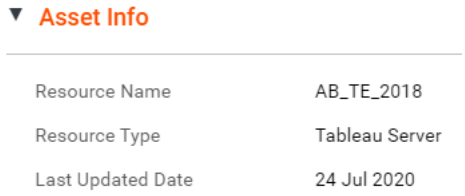

The following image displays a sample business term association:

Asset information

The **Asset Information** section displays information, such as the name of the resource which the Tableau asset belongs to, type of the resource, and last modified date of the asset.

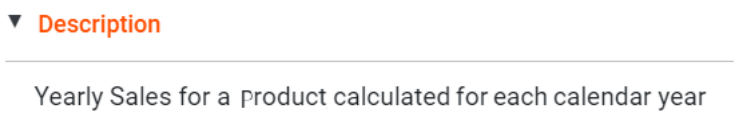

The following image displays a sample asset information section:

Description

The **Description** section displays the Tableau asset description. The description is based on the descriptive context that you provide in Enterprise Data Catalog.

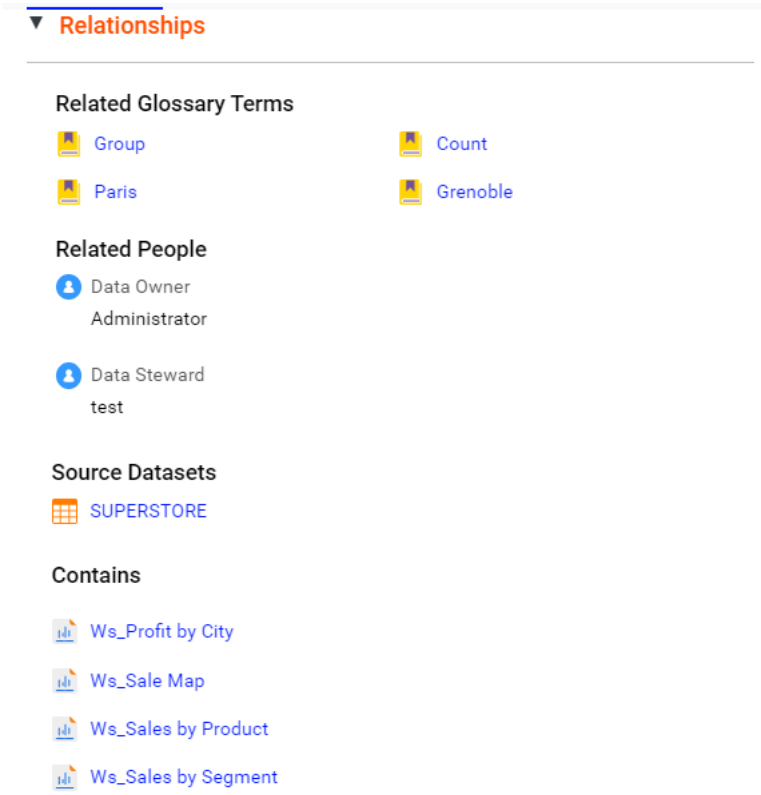

The following image displays a sample description section:

Relationships

The **Relationships** section displays the Tableau asset relationships. The **Relationships** section displays all the related glossary objects, users, related source assets that were used to build the Tableau asset, and contents of the assets.

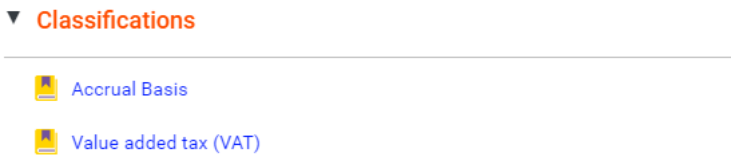

The following image displays a sample relationships section:

Classifications

The **Classifications** section displays all the Tableau asset classifications based on custom attributes of reference data types in Enterprise Data Catalog. The custom attributes of a reference data type depends on how you define the custom attributes in Informatica Business Glossary or Informatica Axon. For example, if you have a report called `Sales Details` and you want to classify the report based on a region. To classify the report, you can assign a custom attribute of reference data type called `APAC` to the report.

The following image displays a sample classifications section:

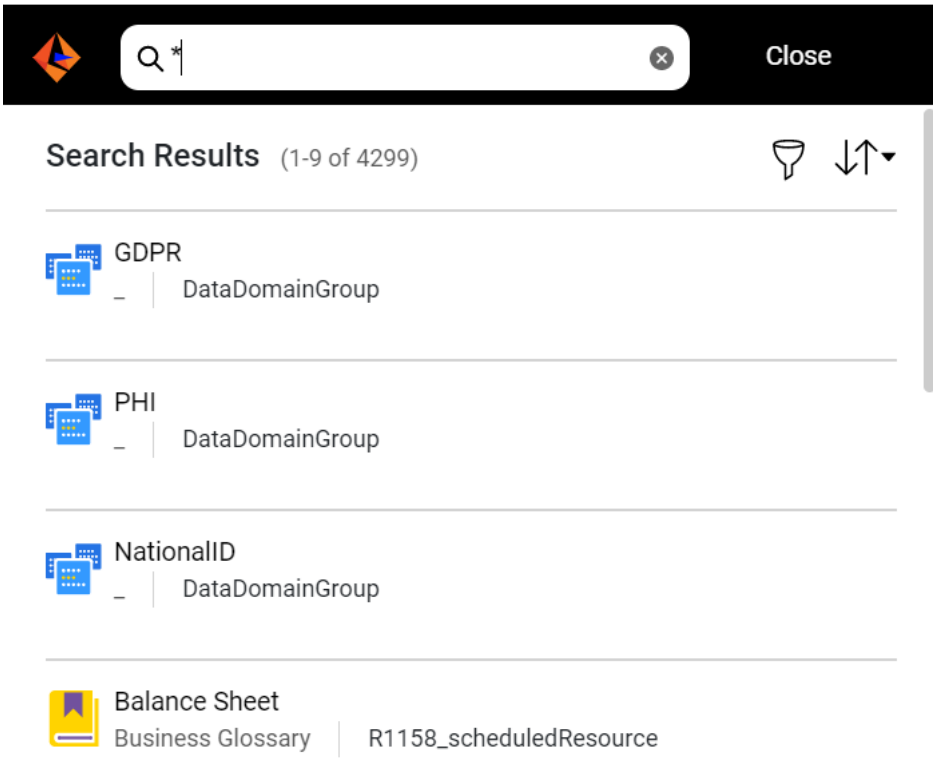

Lesson 5: Search for Tableau Assets Using the Extension

You can use the Enterprise Data Catalog Tableau Extension to search for an asset based on the name, or you can perform a wildcard search to find all the catalog assets. You can use the filter and sort options to refine your search.

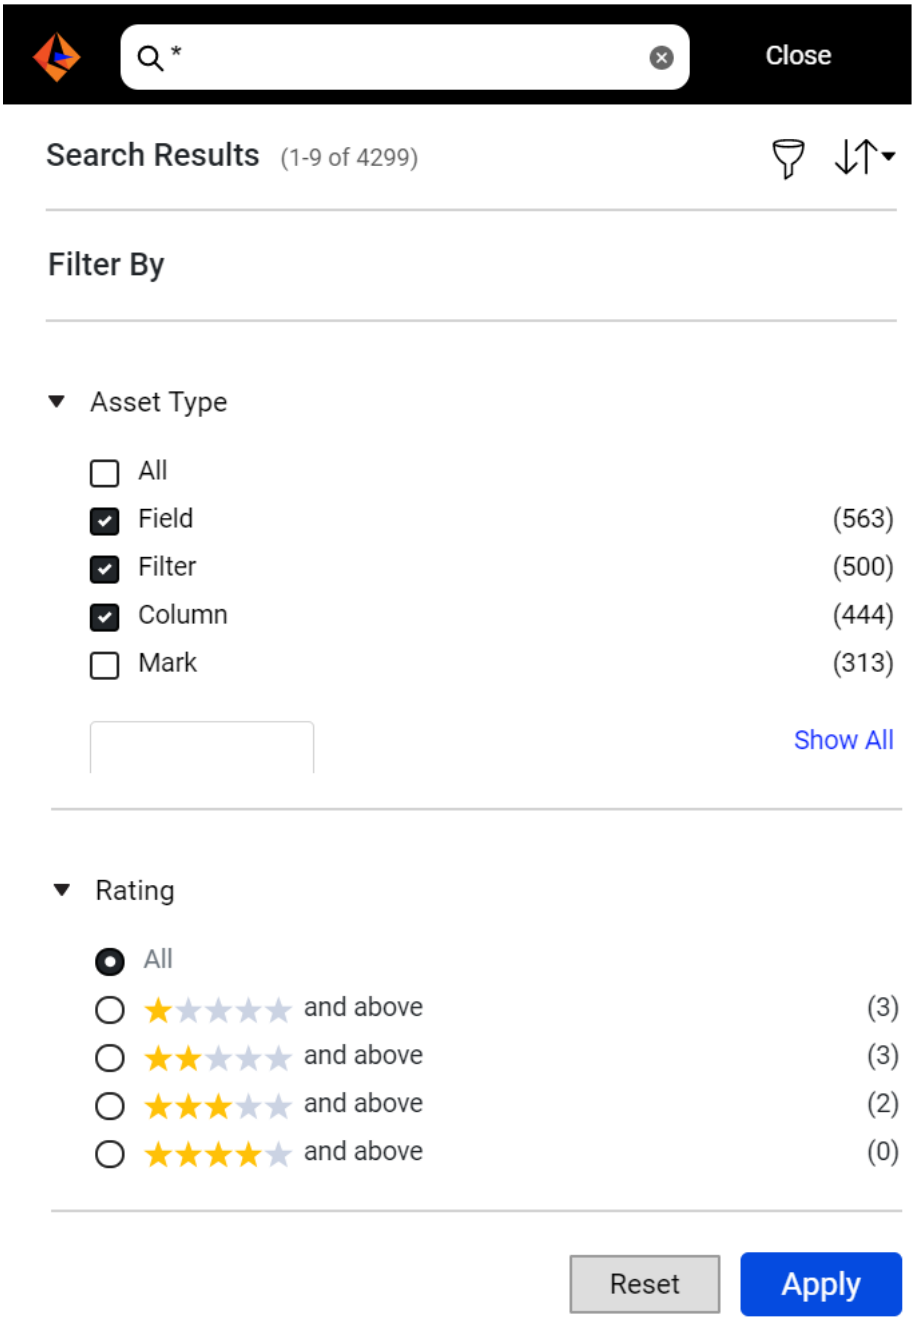

In this lesson, you will learn how to perform a wildcard search, filter the search results, and search for a specific asset in the extension.

1. To perform a wildcard search, enter the wildcard character, asterisk (*) in the search box, and then press **Enter**.

   The Enterprise Data Catalog Tableau Extension lists all the assets in the catalog.

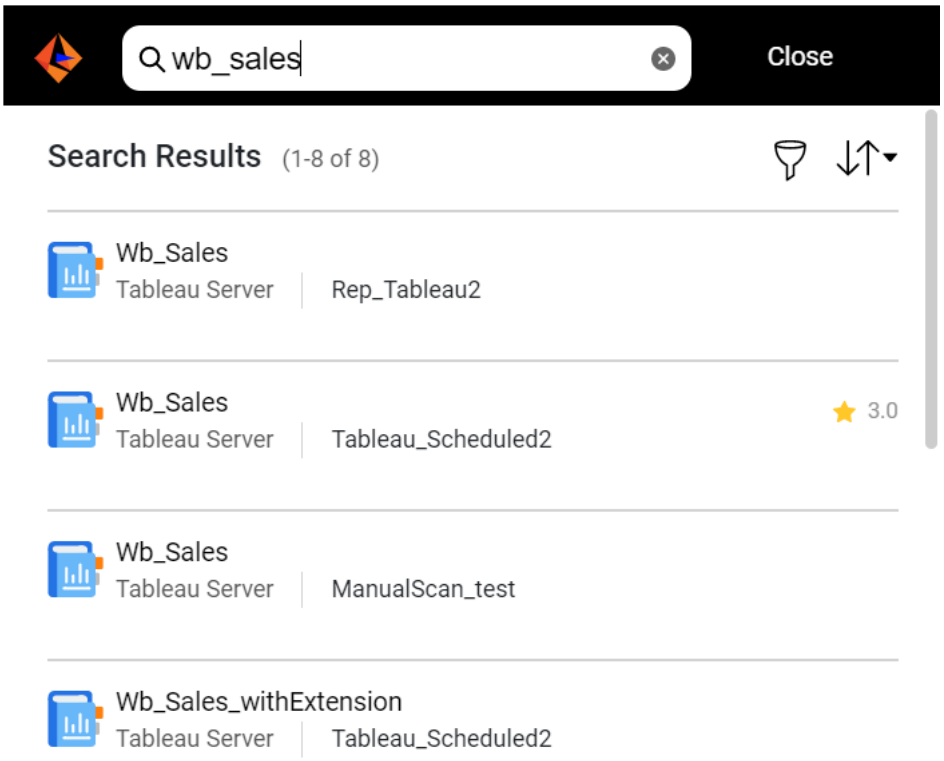

2. To filter the search results, click the filter icon and select the filter options based on your requirements, and then click **Apply**.

3. To search for an asset based on the name, enter the name in the search box, and then press **Enter**.

The matching results appear as shown in the following image:

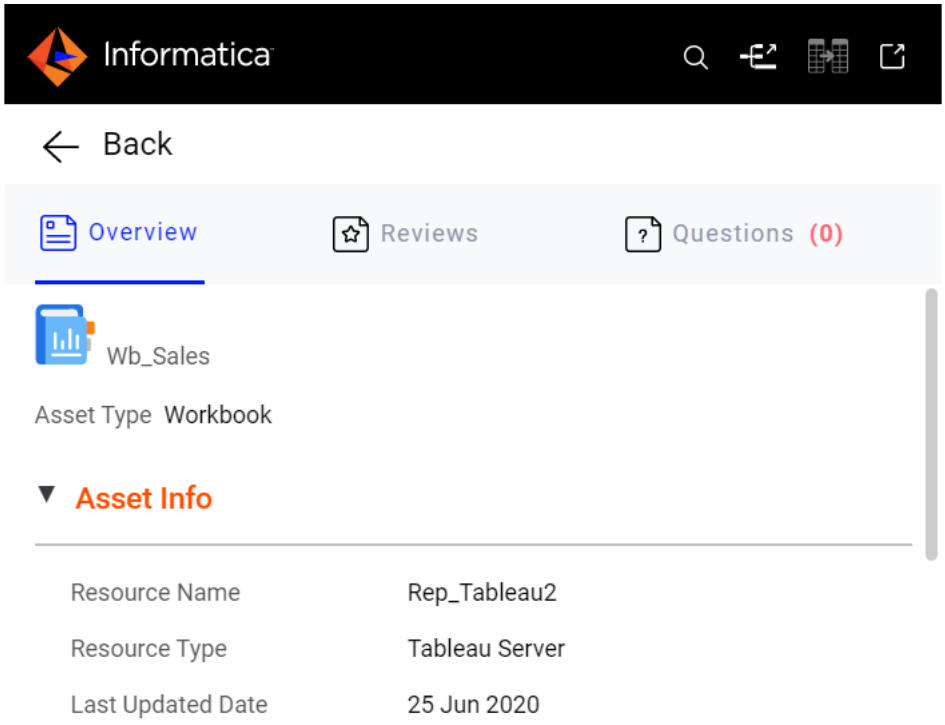

Lesson 6: Collaborate Using Reviews and Questions

You can collaborate on workbooks and tables by adding reviews and questions within the extension.

In this lesson, you will learn how to review an asset and add questions about the asset.

1. From the **Search Results** page, open the asset that you want to rate and review.

   The asset opens on the **Overview** tab.

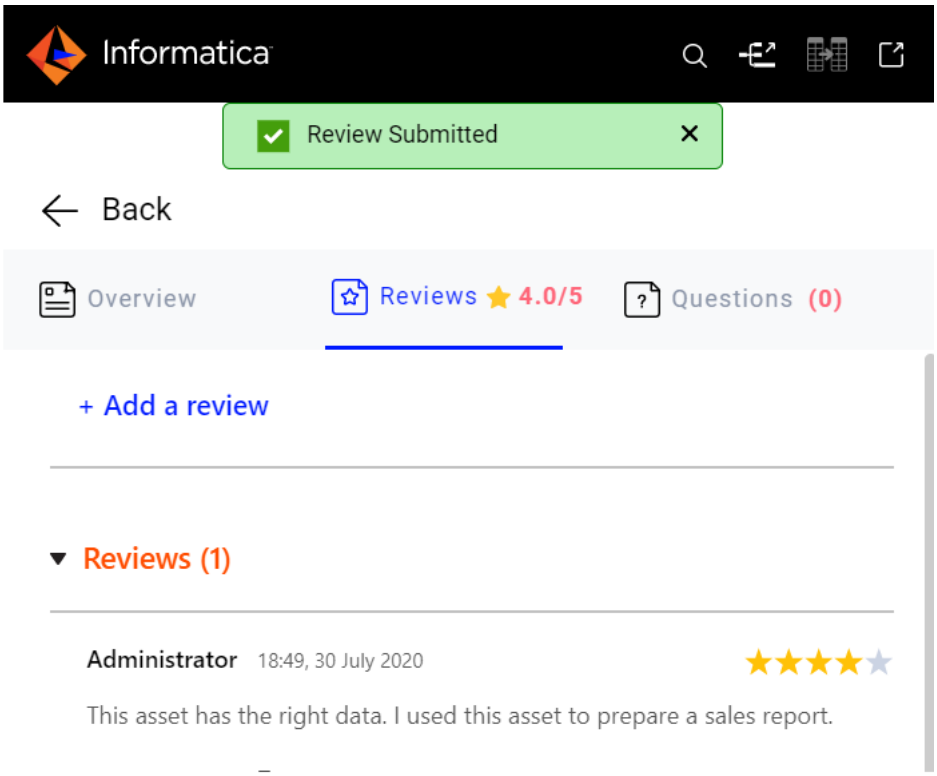

2. To add a review, click **Reviews**

   The **Reviews** tab appears.

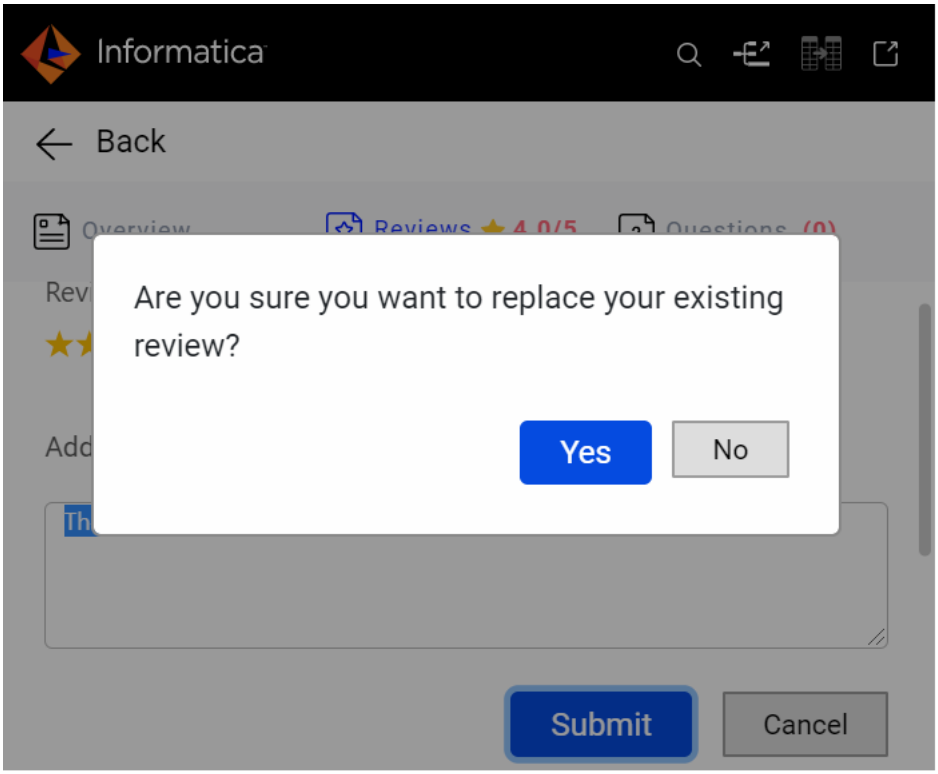

3. Enter the review in the review box, and then rate the asset using the five-star rating above the review box.

4. Optionally, you can just rate the asset using the five-star ratings.
5. Click **Submit**.

6. Optionally, you might want to replace your existing review. To replace your existing review, enter the new review in the review box and rate the asset.

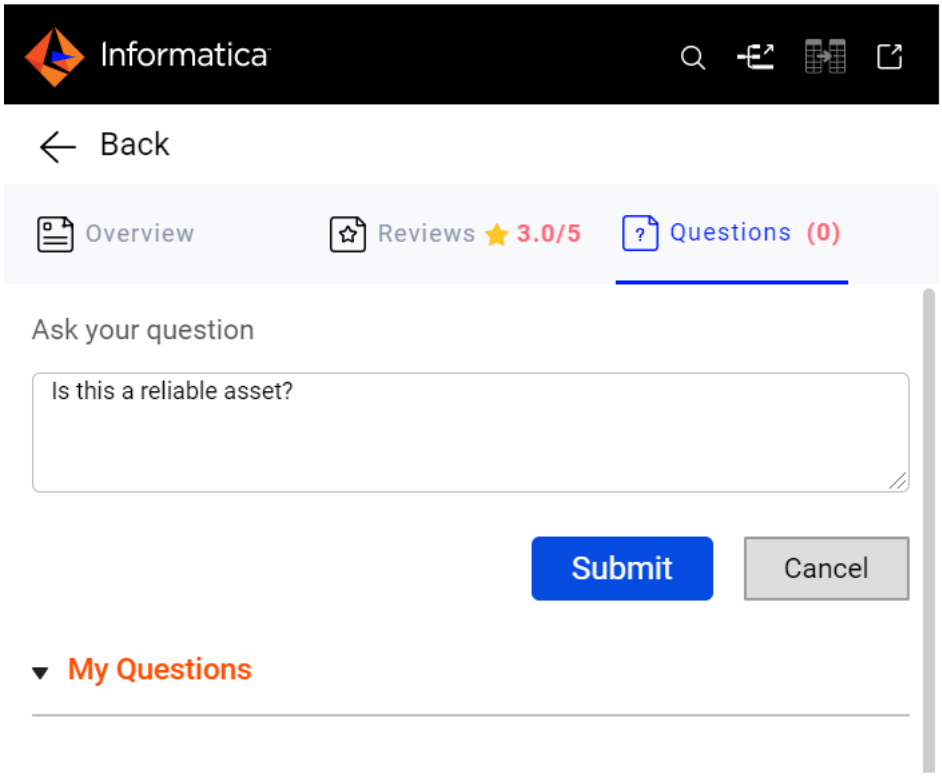

The replace review dialog box appears.

7. Click **Yes** to confirm.
8. To ask a question about the asset, click **Questions**.

   The **Questions** tab appears.

9. Enter the question in the question box, and then click **Submit**.
