Overview

After installing Enterprise Data Catalog, the Informatica administrator must authorize users before they can access and use the Enterprise Data Catalog applications.

To authorize users, the administrator must configure the required privileges in the Catalog Service. The privileges offer the flexibility for the Informatica administrator to grant access to features based on the requirements in the enterprise and prevent unauthorized access.

An administrator can configure the following privileges to enable or disable access to the associated features in Enterprise Data Catalog:

API Privileges

Use REST APIs to perform administrator and user tasks in Enterprise Data Catalog.

Catalog Privileges

Perform tasks related to the catalog management, resource management, data privileges, data domains, and catalog administration.

Data Asset Analytics Privileges

Perform tasks related to managing and using Data Asset Analytics in Enterprise Data Catalog.

Accessing the Catalog Service Privileges

Perform the following steps in Informatica Administrator to configure privileges in Catalog Service:

1. Log in to Informatica Administrator.
2. Click the **Security** tab.
3. Click the **Users** tab. The **Users** panel appears.
4. From the **Users** panel, expand the directory that includes the configured user. For example, if you have used native authentication to authenticate users, expand the **Native** directory to view the list of configured users.
5. Select the user account for which you want to configure access permissions. The <user name> page appears.
6. Click the **Privileges** tab.

7. Click **Edit** under the user name. The **Edit Roles and Privileges** dialog box appears with the **Roles** and the **Privileges** tabs.
8. Click the **Privileges** tab in the dialog box.
9. Expand the Catalog Service that you had configured to view the privileges that you can configure in the following categories:
   - API Privileges
   - Catalog Privileges
   - Data Asset Analytics Privileges

API Privileges

You can authorize users to use the REST APIs provided by Enterprise Data Catalog.

API Privilege	Description
REST API Privilege	Provides users with the administrator role to access the REST APIs. Users with the administrator privileges can configure the application configuration properties using the REST APIs.
REST API User Privilege	Access the REST APIs. The privilege does not include the administrator privileges.

Catalog Privileges

The catalog privileges allow you to authorize users to perform tasks related to catalog management, resource management, data privileges, data domains, and catalog administration.

The privileges are categorized into the following groups:

Catalog Management

Includes privileges to perform tasks in the catalog such as logging in to the application and enriching assets by associating them with business terms or data domains.

Before you configure the following privileges, make sure that you configure the prerequisite privilege listed:

Catalog Management Privilege	Description	Prerequisite Privilege
Catalog View	Log in to Enterprise Data Catalog and view information in the catalog.	None.
Catalog Edit	Log in to Enterprise Data Catalog and enrich assets by associating data domains or business terms and enabling user collaboration.	Catalog View
Application Configuration	Access the application configuration options in Enterprise Dtaa Catalog.	Catalog View

Catalog Management Privilege	Description	Prerequisite Privilege
Domain Creation	Create smart data domains.	None.
Domain Curation	Accept or reject data domain associations with assets.	Catalog View or Catalog Edit The Domain Creation privilege is enabled by default when you enable Domain Curation.

Resource Management

Includes privileges to view and edit resources.

Before you configure the following privileges, make sure that you configure the prerequisite privilege listed:

Resource Management Privilege	Description	Prerequisite Privilege
Admin - View Resource	View resources in Catalog Administrator.	None.
Admin - Edit Profiling	Edit profiling configuration for resources in Catalog Administrator.	Admin - View Resource
Admin - Edit Resource	Edit resources and edit profiling configuration for resources in Catalog Administrator.	Admin - Edit Profiling

Data Privileges

Includes privileges to view profiling and data discovery results.

Before you configure the following privileges, make sure that you configure the prerequisite privilege listed:

Data Privilege	Description	Prerequisite Privilege
View Data	View profiling or data discovery data excluding sensitive data such as the minimum and maximum values.	Catalog View
View Sensitive Data	View profiling or data discovery data including sensitive data such as the minimum and maximum values.	View Data

Domain Management

Includes privileges to perform data domain management tasks such as creating and editing data domains.

Before you configure the following privileges, make sure that you configure the prerequisite privilege listed:

Domain Management Privilege	Description	Prerequisite Privilege
Admin - View Domain and Domaingroup	View data domains, data domain groups, and composite data domains.	Admin - View Resource, Monitoring, or Create Attribute.
Admin - Edit Domain and Domaingroup	Create, update, view, and delete data domains, data domain groups, and composite data domains.	- Admin - View Resource, Monitoring, or Create Attribute - Admin - View Domain and Domaingroup

Admin

Includes privileges to perform administrator tasks such as creating attributes and monitoring resource run status:

Admin Privilege	Description	Prerequisite Privilege
Create Attribute	Create custom attributes.	None.
Monitoring	Monitor the resource run status in Catalog Administrator.	None.

Data Asset Analytics Privileges

The Data Asset Analytics privileges that you can configure in the Catalog Service allow you to authorize users to perform tasks related to Data Asset Analytics in Enterprise Data Catalog.

The tasks related to Data Asset Analytics include the following activities:

- Report management tasks that involve viewing and downloading raw data from the catalog.
- Dashboard management permissions to view the reports and charts.
- Administration tasks including application configuration, report management, and dashboard management.

Configure the following privilege for the user before you enable the required Data Asset Analytics privileges:
Catalog Privileges > **Catalog Management** > **Catalog View**

Configure the listed privileges based on your requirements:

Data Asset Analytics Privilege	Description
Report Management : View and Download Raw Data	The privilege to view, configure, and create analytical details in the **Analytics** tab and download the reports in CSV format. As a user with this privilege, you cannot access the **Application Configuration** section of Data Asset Analytics to configure the **Application** and **Server Settings** tab. The reports that you create as a user with this privilege can only be accessed by you.
Dashboard Management : Visualize	The privilege to view the analytical details in the **Analytics** tab. As a user with this privilege, you can only view the analytical charts.
Admin Management : Configuration	The administrator privilege to perform all operations in the **Analytics** tab. The reports that you create as a user with this privilege can only be accessed by you.
