- Third-Party Known Limitations (Cumulative) . . . 18

Preface

Informatica 10.5.11 is a hotfix release that contains information about multiple emergency bug fixes, restricted functionality, known issues, and bug fixes.

The hotfix supports PowerCenter, Informatica Data Quality, Data Engineering products, Data Catalog products, Data Privacy Management, Enterprise Data Preparation, and Test Data Management products.

It is available on Linux, AIX, and Windows, and you can download it from the Informatica Network.

Note: Product documentation is updated for every major release even if a guide does not contain any updated functionality. Product documentation is updated for service packs and hotfixes only if a guide contains updated functionality. If you can't find a guide for a service pack or hotfix, look at the previous version.

Important Notices

Informatica 10.5.11 release includes the following important notices:

Third-Party Support Updates (10.5.11)

Informatica 10.5.11 includes upgraded versions of the following components:

Component Name	Version
Apache Lucene	9.11.1
Apache Solr	9.8.1
Apache Tomcat	10.1.57.0

For information about other supported versions, see the Product Availability Matrix on Informatica Network: product-availability-matrices.

Installation

Read this section to learn about the installation and Upgrade in version 10.5.11.

Installation and Upgrade

Informatica version 10.5.11 is a hotfix release. This version supports PowerCenter, Informatica Data Quality, Data Engineering products, Data Catalog products, Data Privacy Management, and Test Data Management products as part of the unified installer. Test Data Management and Data Privacy Management require an upgrade of services in addition to applying the hotfix.

You can choose one of the following installation approaches to use Informatica version 10.5.11:

- New installation

- Upgrade from a supported version
- Apply the hotfix to 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10

The instructions to install, upgrade, or apply the hotfix to a product are in the individual guides for each product.

Upgrade Paths (10.5.11)

The upgrade path that you take depends on the products and versions that you're currently using.

Consider the following rules and guidelines to applying the hotfix or upgrade:

- You can apply the hotfix if you are on any version associated with the major release. For example 10.5 is a major release, so you can apply the hotfix from any version of 10.5.x.
- If you're not currently using a version associated with the major release, you can upgrade to the current release from any supported previous release.
- If you are on a version that doesn't support a direct upgrade, you must first upgrade to a supported version.
- Any supported update also includes hotfixes, service packs, and cumulative patches.

Important: If Data Engineering is in the same domain as any other product supported by the Informatica installer, verify that all products are upgraded to the same supported upgrade version before you upgrade to 10.5.11.

The following table lists the upgrade paths for each product that the installer supports.

Product	Versions
PowerCenter	You can apply the10.5.11 hotfix to version 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5.11 from the following previous versions: - 10.2 including any hotfix, service pack, or cumulative patch - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch
Informatica Data Quality	You can apply the 10.5.11 hotfix to version 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5.11 from the following previous versions: - 10.2 including any hotfix, service pack, or cumulative patch - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch

Product	Versions
Data Engineering Integration Data Engineering Quality	You can apply the 10.5.11 hotfix to version 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5 from the following previous versions, and then you can apply the 10.5.11 hotfix: - 10.2 including any hotfix, service pack, or cumulative patch - 10.2.1 including any hotfix, service pack, or cumulative patch - 10.2.2 including any hotfix, service pack, or cumulative patch - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch **Important:** If Data Engineering is in the same domain as any other product supported by the Informatica installer, verify that all products are upgraded to the same supported upgrade version before you upgrade to 10.5.11.
Data Engineering Streaming	You can apply the 10.5.11 hotfix to version 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5 from the following previous versions, and then you can apply the 10.5.11 hotfix: - 10.2.2 including any hotfix, service pack, or cumulative patch - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch
Data Privacy Management	You can apply the 10.5.11 hotfix to versions 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5 from the following previous versions, and then you can apply the 10.5.11 hotfix: - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch
Enterprise Data Catalog	You can apply the 10.5.11 to version 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5, 10.5.1, 10.5.2, 10.5.3, or 10.5.4 from the following previous versions, and then you can apply the 10.5.11 hotfix: - 10.4 (including any service packs or cumulative patches) - 10.4.1 (including any service packs or cumulative patches) **Important:** If Enterprise Data Catalog and Data Engineering are in the same domain of a version 10.4.1, 10.4 or earlier, upgrade them both to version 10.5, 10.5.1, 10.5.2, 10.5.3, or 10.5.4 before you upgrade to 10.5.11.
Enterprise Data Preparation	You can apply the 10.5.11 hotfix to version 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. **Note:** You cannot upgrade to version 10.5.11 from Enterprise Data Preparation version 10.5.7. You can upgrade to version 10.5, 10.5.1, 10.5.2, 10.5.3, or 10.5.4 from the following previous versions, and then you can apply the 10.5.11 hotfix: - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch
Test Data Management	You can apply the 10.5.11 hotfix to versions 10.5, 10.5.1, 10.5.2, 10.5.3, 10.5.4, 10.5.5, 10.5.6, 10.5.7, 10.5.8, 10.5.9, or 10.5.10 including any service pack or cumulative patch. You can upgrade to version 10.5 from the following previous versions, and then you can apply the 10.5.11 hotfix: - 10.4 including any service pack or cumulative patch - 10.4.1 including any service pack or cumulative patch

Before You Upgrade

Elasticsearch Client and Server Version Upgrade Notice

Effective in release 10.5.11, the Elasticsearch client upgrades to version 8.19.11.

Important: Data Privacy Management requires Elasticsearch server version 8.19.x or later to ensure compatibility with the upgraded client library. Elasticsearch server versions earlier than 8.19.x are not supported.

Before you upgrade to version 10.5.11, verify that your Elasticsearch server is running on version 8.19.x or later.

Before You Roll Back

After You Apply the HotFix

Reindex Model Repository Service

After you apply the HotFix for 10.5.11, reindex Model Repository Service to ensure compatibility with the Solr and Lucene upgrades and to maintain the object search functionality.

For more information about how to rebuild the search index, refer the Knowledge Base article:
Reindex Model Repository Service

10.5.11 Fixed Issues

This section contains issues and enhancements that were fixed in 10.5.11.

Data Engineering Integration Fixed Issues (10.5.11)

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
BDM-43701	The Developer tool fails to preview data for a Hierarchy-to-Relational transformation, and a NullPointerException occurs.
BDM-43696	When you run mappings on the Spark engine that uses window functions, the mapping fails with the following error: `isubWith is not a member of org.apache.spark.sql.DataFrame`
BDM-43675	When you run mappings on the Spark engine, the mapping and the execution plan fails with the following error: `java.lang.IllegalArgumentException: fromIndex(243) > toIndex(46)`

Issue	Description
BDM-43674	When the profile definition does not include a sampling policy, the `infacmd ps ExecuteProfile` command fails with a null pointer exception.
BDM-43595	When you run mappings with a Hive source and target on CDH 7.2.18, CDH 7.3.1 SP1, or CDH 7.3.1 SP2 distributions, the Hive mappings fail.

Closed Enhancements

The following table describes closed enhancements:

Issue	Description
BDM-43818	Data Engineering Integration certifies the Databricks 14.3 LTS runtime as a target cluster.

Enterprise Data Catalog Fixed Issues (10.5.11)

Fixed Issues

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
EIC-70543	The auto connection assignment job fails to build a valid catalog search URI for asset names with non-ASCII characters.
EIC-70536	The Enterprise Data Catalog incorrectly allows users with read only access to block the Import Custom Attributes action and submit bulk import jobs.
EIC-70511	The Enterprise Data Catalog MicroStrategy scanner fails to catalog the member attributes of OLAP-type Attribute Prompt objects and displays the prompt with an empty attribute list.
EIC-70348	EDC fails to establish complete Qlik Sense lineage, and drops downstream dependency edges.
EIC-70318	EDC lineage view breaks when the user filters by a Custom Attribute such as KRI, and returns an incomplete lineage graph.
EIC-70251	Azure Data Lake Storage Gen2 v2 jobs become unresponsive and fail with an OutOfMemoryError.
EIC-70197	Unable to assign the Metadata and Data Read permission on Databricks Delta Lake Advanced Scanner resources in Idmadmin of Enterprise Data Catalog.
EIC-70159	LDM catalog fails to display the context values of Business Terms.
EIC-70158	The AM_SNOWFLAKE_SHARE_DB job fails to complete successfully as the AutoConnection Assignment step consumes excessive time.
EIC-70135	The Data Domain Overview page in the Enterprise Data Catalog fails to display dataset values for external columns associated with a data domain.

Issue	Description
EIC-70124	Enterprise Data Catalog profile jobs fail to run on Google BigQuery resources that you create in Metadex.
EIC-70123	Enterprise Data Catalog fails to render the lineage view at the table or column level.
EIC-70114	When you perform Data Discovery for AdvancedDatabricks resources, the field Number of empty objects in the Statistics tab incorrectly displays the total number of objects sent for profiling in the scan summary.
EIC-70102	Enterprise Data Catalog Resource Summary Changes emails report cumulative historical changes instead of the current scan changes.
EIC-70095	When two Axon resources share the same glossary ID, Enterprise Data Catalog resolves a technical asset's business term association to the incorrect glossary.
EIC-70095	A shared glossary identifier between two Axon resources causes Enterprise Data Catalog to associate technical assets with the incorrect glossary.
EIC-70093	After you cancel or pause the profiling job in ldmadmin, Data Integration Service (DIS) fails to terminate profile-job threads.
EIC-70092	When the synonym file contains Korean or other special characters, the term association scans fail.
EIC-70092	In Enterprise Data Catalog, synonym-based tagging fails to associate business terms for Korean and other non-Latin locales.
EIC-69972	After you upgrade, Enterprise Data Catalog fails to display schema in the data lineage view.
EIC-69712	Enterprise Data Catalog fails to extract the source description for tables and columns for Hive resources.
EIC-69595	Catalog UI fails to display the Value Frequency for discovered columns.
EIC-69131	EDC SAP HANA and AWS Glue resource types lack a Description field.
EIC-69110	Enterprise Data Catalog incorrectly logs empty messages for Similarity Discovery resources.
EIC-69108	Enterprise Data Catalog extracts more than N rows instead of the last-N row sample from a largeMongoDB resource and causes an OutOfMemoryError.
EIC-68703	In Enterprise Data Catalog, certain JAR files incorrectly used the YYYY (week-year) format instead of the yyyy (calendar-year) format, causing incorrect date calculations around year boundaries.
EIC-68255	Enterprise Data Catalog incorrectly creates empty directories under `<installation directory>/services/CatalogService/MRSScanner/INFA_CMD_LOC` on every service.
EIC-68148	After you disable the Resource Pre-filter, non-admin users cannot access the resources while admin users can access the resources in the Search tab.

Issue	Description
EIC-67603	Remote and Offline scanners of Enterprise Data Catalog fail to display ApacheKafka as a supported resource type.
EIC-66870	EDC fails to render an asset's lineage, and returns an unclear error that points at asset absence or permissions.
EIC-66076	EDC import jobs report success when the user lacks the asset write permission, instead of a permission-denied error.
EIC-64939	EDC lacks a CSV export for lineage and impact-analysis data, and blocks downstream automation.
EIC-64736	EDC lineage diagrams lack a filter to show only the path of a single selected source or script.
EIC-64523	Reindex reports resource counts that disagree with the LDM catalog, and writes false `resource not found` log entries.
EIC-64355	Customer penetration tests report low-severity vulnerabilities in EDC that need remediation.
EIC-64328	EDC search results display the old business term name after a rescan of the Business Glossary resource, instead of the latest name.
EIC-63595	Catalog UI labels SAP BW Info Objects as Info Providers, and misclassifies them.
EIC-63539	Catalog Admin synonym uploads add a stray backslash escape character before each double-quote character in the saved synonym definition.
EIC-63503	The Catalog Synonym DELETE API call fails to remove synonyms across all nodes of a multi-node cluster.
EIC-63246	Catalog UI notifications bury the most-recent change in the middle of the Change description, and mislead reviewers.
EIC-63181	When a manually scheduled scanner job fails, Enterprise Data Catalog fails to record an error entry in the log file.
EIC-63070	The `PUT /access/2/catalog/jobs/resourceExports` API call fails to create a unique resource export, and returns a duplicate-entry error for `core.classType` and `core.name`.
EIC-62845	EDC creates Reference Assets but displays them as Null in the asset list.
EIC-62458	Enterprise Data Catalog incorrectly logs errors for the deprecated ChangeNotification resource in LDM.log file.
EIC-62308	Catalog Service email-notification setup lacks a pre-flight check for the Email Service, and silently fails when the user disables the Email Service first.
EIC-62127	EDC bulk import displays garbled text for special characters in the imported metadata.
EIC-62050	EDC fails to assign a Data Owner or SME to a Teradata resource, and returns a generic assignment failure.

Issue	Description
EIC-62014	EDC exports an empty asset list when the user invokes the Export action from the `Search Result` left-menu link in ldmcatalog.
EIC-61935	EDC lacks certified deployment support for Oracle Linux 9 as a host platform.
EIC-60669	EDC bulk import job reports a Completed status, and silently masks row-level errors that occurred mid-import.
EIC-60342	EDC Table > Columns list view lacks accept/reject controls for Business Title suggestions.
EIC-59597	EDC clone-resource action fails to copy pre-populated fields such as username, hostname, and port to the new resource.

Closed Enhancements

The following table describes closed enhancements:

Issue	Description
EIC-70377	The Netezza resource aborts the scan job during a connection error, and accurately reports the incomplete state instead of a false success.
EIC-70102	The Resource Summary Changes email reports changes from the current scan and excludes cumulative historical changes from prior scans.
EIC-70017	When you enable Similarity Discovery, profile scans on Amazon S3 V2 resources complete successfully for Parquet files.
EIC-69866	When you profile Databricks Delta Lake sources with Databricks Spark cluster pushdown optimization, you can use the Table Sample sampling option.
EIC-69712	Enterprise Data Catalog and the export file display the table and column comments that the Hive scanner populates in the com.infa.ldm.relational.Comment attribute.
EIC-69131	You can view the Description field for SAP HANA and AWS Glue assets in Enterprise Data Catalog.
EIC-68148	When you disable the Resources prefilter tab, Enterprise Information Catalog enforces access restriction consistently for all account types.
EIC-61935	Enterprise Data Catalog certifies Oracle Linux 9 as a host platform.
EIC-60342	The columns list view in a table provides a control to reject business titles that the Enterprise Data Catalog auto-accepts for columns.
EIC-58847	When you bulk import Axon Glossary custom attribute values, you can use the full hierarchical path to identify Axon terms in the CSV file.

Informatica Data Quality Fixed Issues (10.5.11)

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
ANT-3344	The Analyst tool incorrectly allows you to upload flat file data objects of any format.

On Premise Connectivity Fixed Issues (10.5.11)

Fixed Issues

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
OCON-32443	Snowflake PowerCenter session log writes spurious SLF4J warnings, and returns the messages (No SLF4J providers were found; Defaulting to NOP).
OCON-32395	A record insertion fails due to a payload validation error for the target entity.
OCON-32391	Mercury Adapter main line lacks the classloader hang fix, and requires a forward port.
OCON-32381	The Z_PM_RFC_WRITE_TABLE function module used for SAP table writer transports failed to include integrated authority check functionality.
OCON-32340	Oracle connector fails to return row counts that exceed UB4MAXVAL, and displays the following error: `ORA-03148: OCI_ATTR_ROW_COUNT cannot return a row count exceeding UB4MAXVAL`
OCON-32264	Snowflake sessions terminate unexpectedly with segmentation fault.
OCON-32253	Azure SQL Data Warehouse connector fails to read `Datetime2` columns after upgrade, and returns type-conversion errors.
OCON-32250	After you enable HTTPS, the Metadata Access Service fails to start with the following database connection error: `java.lang.NoSuchMethodError: 'void org.apache.hc.core5.http.impl.io.DefaultHttpRequestWriterFactory.<init>(org.apache.hc.core5.http.config.Http1Config)'`
OCON-32201	Data load from large SAP tables cause SAP connector sessions in stage mode to fail unexpectedly in PowerCenter.
OCON-32194	After you upgrade, Informatica Data Quality fails to run Amazon Redshift jobs when the S3 bucket resides in the `us-east-1` region and returns the following error: `The URI scheme of endpointOverride must not be null.`

Issue	Description
OCON-32193	After you upgrade, PowerCenter fails to run Amazon Redshift jobs when the S3 bucket resides in the `us-east-1` region and returns the following error: `The URI scheme of endpointOverride must not be null.`
OCON-32064	In Informatica Data Quality, a mapping fails to run with the following error: `Error: 0A000438 REST Invoker encountered an error while invoking the REST`

Metadata Manager Fixed Issues (10.5.11)

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
MM-6343	The Metadata Manager service fails to accept HTTPS requests that use the TLS 1.3 protocol, and returns HTTP status 405(Method Not Allowed) error.
MM-6342	After you upgrade, Metadata Manager denies access to LDAP users who have the required Metadata Manager roles and returns an unauthorized error.
MM-6342	Metadata Manager incorrectly returns an unauthorized error and denies access to LDAP users, even when they have the required roles.

MetaDex Scanner Fixed Issues (10.5.11)

Fixed Issues

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
SCAN-36199	The Power BI MetaDex scanner fails to evaluate a Power Query that calls the Table.Min function and throws a dataflow graph error.
SCAN-34372 SCAN-32691	The DataStage MetaDex scanner fails to extract actual Oracle and Teradata table names, and retains placeholder values.
SCAN-33128	The SAP BODS MetaDex scanner fails to assign values based on a Sybase metatable query.
SCAN-33006	The CDI MetaDex scanner incorrectly catalogs Salesforce target table names that include a hash key value from the mapping, which does not correspond to any Salesforce asset.

Issue	Description

SCAN-32472	The Oracle MetaDex scanner fails to batch-update a table and throws the following error:
	`Could not execute batch [ORA-01461:`
	`can bind a LONG value only for insert into a LONG column]`

SCAN-32427	The DataStage MetaDex scanner omits associated target tables from a job and catalogs an incomplete target list.
SCAN-32354	When you use a filter with an asterisk (*) as a project placeholder, SAP BusinessObjects Data Services MetaDex scanner fails to process graphs. The scanner produces additional warnings about missing connections, which affect the scan statistics.
SCAN-31939	The Tableau MetaDex scanner incorrectly fetches the same site metadata more than once when a scan uses multiple filters.
SCAN-31307	The Databricks MetaDex scanner fails to parse a command and returns the following error: `Unknown attribute extract_tb on object of class module`
SCAN-31305	The AWS Glue MetaDex Python scanner fails to parse a custom module.
SCAN-31208	The Metadex resource for Microsoft SQL Server fails to parse a stored procedures that contains a message body with the following parse error: `Parse error (InputMismatch) on token: ';'`
SCAN-30923	The MetaDex resource for DataStage fails to apply parameter overrides, and assigns the same parameter value for all job instances.
SCAN-30544	The MetaDex resource for Databricks generates excessively large debug logs due to the recording of HTTP wire data.
SCAN-30481	The Metadex resource for Microsoft Power BI fails to process reports that contain a Power Query lambda expression and displays the following error: `Cannot resolve PowerQueryScalar from PowerQueryLazyRecord`
SCAN-29706	The MetaDex resource for SAS fails to evaluate a certain macro and displays the following error: `Position 'UNINITIALIZED' should not occur in text.`
SCAN-29397	The MetaDex resource for Salesforce fails to load Salesforce objects, and displays the following error: `Status code : 404 Reason : Not Found Response entity {"errorCode":"NOT_FOUND"er:175,"message":"The requested resource does not exist }`
SCAN-29364	The MetaDex resource for Teradata fails to extract tables and reports an Unknown table error.
SCAN-28878	The MetaDex resource for SAS fails to process valid Excel sheet ranges and causes an IllegalArgumentException.
SCAN-28331	The MetaDex resource for SAS fails to generate lineage for tables created with PROC SQL.
SCAN-27715	The Metadex resource for Azure Data Factory fails to scan a complex concat expression.

Issue	Description
SCAN-21687	The MetaDex resource for DataStage fails to resolve an Oracle table when the schema or table names contain a space.
SCAN-21375	The Power BI Cloud MetaDex resource fails to process a Power Query that use the Table.Max function.

PowerCenter Fixed Issues (10.5.11)

Fixed Issues

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
PLAT-32673	After you upgrade, the Administrator tool takes longer to display the Domain view on the Manage tab.
PLAT-32609	A performance degradation occurs when loading the Domain Overview page in the Administrator tool as compared to the previous version.
PLAT-32553	The admin console omits seconds from log timestamps although the infacmd getLog format option supports second-level precision.
PLAT-32154	After you upgrade to a Java version 11 or above, the infacmd commands consume more CPU resources which causes update tasks to time out.
CORE-11836	Mapping fails intermittently with an assert in monitoringmgr.cpp (line #3721).
CORE-11779	PowerCenter on UNIX lacks direct SMTP server configuration for workflow emails.
CORE-11741	Current release lacks the EBF-28422 fix, and requires a forward port via EBF-29403.
CORE-11737	Repository Service lags between workflow completion and session completion, and delays subsequent workflow starts.
CORE-11724	PowerCenter sessions with Java components or connectors raise a segmentation fault at the `createJVM` call in `libpmjvm.so`.
CORE-11723	pmrep backup command failed to validate incorrect or missing extensions for repository backup files.
CORE-11721	When you import a mapping template, the Import Mapping Template functionality failed with an invalid error, even when using valid template files.
CORE-11720	CDIPC clients in the current release lack the EBF-29353 fix, and require a forward port.
CORE-11718	PowerCenter Designer fails to display Java Transformation API Options when the System Language uses Korean.

Issue	Description
CORE-11716	PowerCenter Java components or connectors raise a segmentation fault in `libjvm.so` after the `createJVM` call.
CORE-11715	Cloud Data Integration for PowerCenter detailed metering payload exceeds the size limit, and blocks telemetry submission.
CORE-11714	PowerCenter Designer fails to display Java Transformation API Options when the System Language uses Korean.
CORE-11713	The pmrep backup command with the -i option was timing out because its query structure prevented the use of database indexes, forcing slow, full table scans on large tables.
CORE-11711	Cloud Data Integration for PowerCenter clients fail to authenticate through a proxy server.
CORE-11704	The Informatica domain shuts down unexpectedly after an upgrade because of repeated out-of-memory errors.
CORE-11663	After you upgrade, PowerCenter SQL Server stored procedure calls fail.
CORE-11662	PowerCenter sessions with Java components or connectors raise a segmentation fault in `libjvm.so` after the `createJVM` call.
CORE-11660	Web Service Hub encounters a deadlock during concurrent web service requests and stops responding.
CORE-11651	The PowerCenter deployment fails on a Widget Shortcut object whose name collides with an existing object, and returns the following error: `REP_55035 Widget Shortcut object <name> has name conflicts`
CORE-11646	The PowerCenter Web Services Hub intermittently shuts down on the master gateway node and fails to raise an exception.
CORE-11618	The Replace option fails to deploy folders between domains if the Repository Service and folder names are the same in both source and target.
CORE-11611	Repository Service fails to release workflow execute locks after run completion, and blocks subsequent workflow runs.
CORE-11540	When you run mappings with a Kafka source, the mapping fails to recover on the `resume from last checkpoint` setting and crashes mid-run.

Closed Enhancements

The following table describes closed enhancements:

Issue	Description
PLAT-32564	The Informatica domain services replace the third-party sigar DLL used to fetch node process statistics, and eliminate the resulting Java process crashes.
PLAT-32553	The Administrator tool displays log timestamps with second-level precision, and matches the format that `infacmd getLog` command uses.
CORE-11646	The PowerCenter Web Services Hub logs an entry with the failure reason when it fails to communicate.

Profiles and Scorecards Fixed Issues (10.5.11)

Review the Release Notes of previous releases for information about previous fixed issues.

The following table describes fixed issues:

Issue	Description
IDE-5932	Profile and scorecard runs do not push down random sampling to the source database on JDBC sources.
IDE-5919	When you run profiles or scorecards, Informatica Data Explorer throws a NoSuchMethodException.
IDE-5917	When you run a mapping with SQL JDBC server as the source, filter pushdown fails to push predicates and reads the full row set at runtime.
IDE-5898	Data Quality scorecard drilldown for JDBC sources retrieves all records though the UI displays the first 100 records.

10.5.11 Known Issues

This section contains known issues that were found in 10.5.11.

Data Engineering Integration Known Limitations (10.5.11)

The following table describes known issues that were found in 10.5.11:

Issue	Description
IIS-6160	Python Mappings on Databricks 14.3 cluster fail with the following error: `java.lang.UnsatisfiedLinkError` on `jep.Jep.init()`

PowerCenter Known Limitations (10.5.11)

The following table describes known issues that were found in 10.5.11:

Issue	Description
CORE-11782	The pmrep listobjectdependencies command in PowerCenter Repository Service returns incomplete parent dependencies on the Oracle 26ai platform.

On Premise Connectivity Known Limitations (10.5.11)

The following table describes known issues that were found in 10.5.11:

Issue	Description
OCON-32448	The pmrep executequery command in PowerCenter Repository Service returns incorrect results on the Oracle 26ai platform, and omits the `default_session_config` row in three built-in queries.
OCON-32481	The PubSub test connection and design time for Mercury Adapter fails with the following error: `Provider Unable to get public no-arg constructor`

Emergency Bug Fixes Merged into 10.5.11

Informatica merged Emergency Bug Fixes (EBFs) from previous releases into version 10.5.11. These EBFs provided fixes for issues that were found in previous releases.

For a list of EBFs that were merged into version 10.5.11, see the following Informatica Knowledge Base article:

https://knowledge.informatica.com/s/article/FAQ-What-are-the-Emergency-Bug-Fixes-EBFs-merged-into-Informatica10-5-11?language=en_US

Cumulative Known Limitations

This section contains known limitations that are carried forward from previous releases.

Data Engineering Integration Known Limitations (Cumulative)

The following table describes known limitations that are carried forward from previous releases:

Issue	Description

BDM-43829	Avro files with column names starting with a digit cause Amazon S3 resource jobs to fail in the native environment with the following error:
	`com.infa.products.ldm.scanners.profilescanner.ProfileScannerUtils-`
	`Could not create id creator for schema:Tutorials/AllFiles/twitter.avro and table:twitter.avro`
	`due to missing row count result summary`

BDM-39707	When you run Kudu mapping with Update Strategy, the transformation fails to validate.

Data Engineering Streaming Known Limitations (Cumulative)

The following table describes known issues that are carried forward from previous releases:

Issue	Description
IIS-5842	When Kafka XML Data object encounters a complex XML schema that has fields with a 'dash', it fails to load data into the Hive table.
IIS-5774	When you run a dynamic mapping with Confluent Kafka as the source and target, incorrect data appears when the following conditions are true: - Data object is of Avro format. - Enable the option to get data object columns from the data source at run time.

Enterprise Data Catalog Known Limitations (Cumulative)

The following table describes known limitations that are carried forward from previous releases:

Issue	Description
ANT-2187	When you select the Show Default schema option in Administrator Tool, the Azure SQL data base import fails.
DFA-597	If a Data Flow Analytics resource name contains Japanese characters, the Download Report job in Enterprise Data Catalog fails to download the report.
EIC-69261	The Db2 for z/OS resource extracts aliases as synonyms but omits breadcrumb navigation and column information from the extracted metadata.

Issue	Description
EIC-60369	Add-on applications for the Enterprise Data Catalog fail to open in Internet Explorer.
EIC-57719	When you launch the Informatica domain using a Docker container image and run the Enterprise Data Catalog Docker image, the upgrade fails.

On Premise Connectivity Known Limitations (Cumulative)

The following table describes known limitations that are carried forward from previous releases:

Issue	Description
OCON-31311	When you run concurrent workflows using PowerExchange for Message Queue to read messages from a single queue, message duplication issues occur.
OCON-30444	When you use PowerExchange for Amazon Simple Storage Service Version 2 (S3 V2) to load data to a target with multiple partitions, a significant delay occurs.
OCON-29823	Azure Cosmo mappings that run on the Spark 3.x with Scala 2.12 sometimes fail with a Scala version mismatch error. Workaround:Update the Azure Cosmos Scala code version 2.12, such as azure-cosmos-spark_3-2_2-12-4.6.0-uber

Third-Party Known Limitations (Cumulative)

The following table describes known limitations that are carried forward from previous releases:

Issue	Description
IIS-5702	When you run a data preview job for a mapping with a Kafka source formatted in JSON with struct set as an array, the following error occurs: `org.apache.avro.SchemaParseException`
OCON-30416	Unable to use multiple BAPIs in a single session with latest SAP NW RFC SDK 7.5 libraries patch 11.
