Abstract

WANdisco fusion is a software application that replicates HDFS data among cluster nodes that are running different versions or distributions of Hadoop to prevent data loss in case a cluster node fails.

You can use Informatica® Big Data Management on Cloudera or Hortonworks clusters where WANdisco is enabled. This article describes how to configure the environment and Big Data Management on WANdisco-enabled clusters.

Supported Versions

- Big Data Management 10.2.1

Overview

You can use Informatica Big Data Management® with a WANdisco-enabled cluster.

When you use Big Data Management with a supported cluster running WANdisco Fusion, HDFS data in cluster storage resources is replicated across cluster nodes.

To use Big Data Management 10.2.1 with a WANdisco-enabled cluster, you download and install a patch for Big Data Management, and then enable Big Data Management on the cluster.

The following table shows support across versions of Big Data Management, WANdisco, and supported clusters:

Big Data Management Version	WANdisco Version	Supported Clusters
10.2.1	2.12.4	- Cloudera 5.14 - Hortonworks 2.6.4

Pre-Implementation Tasks

Before you configure Big Data Management and the cluster environment for WANdisco, perform the following tasks:

- Verify prerequisites
- Download required software

Verify Prerequisites

Verify the following prerequisites.

Informatica Prerequisites

Install Informatica Big Data Management 10.2.1 on-premises or in a cloud environment. For example, Big Data Management could be co-located in a cloud environment with a supported Hadoop cluster.

Cluster Prerequisites

Integrate WANdisco Fusion version 2.12.4 on a cluster with one of the following Hadoop distributions:

- Cloudera CDH 5.14
- Hortonworks HDP 2.6.4

Download the Patch For Big Data Management 10.2.1

Download the patch EBF-12390 from Informatica to use Big Data Management 10.2.1 with a WANdisco-enabled cluster.

1. Log in to https://network.informatica.com.
2. Click HotFix Downloads.
3. Click the EBF Download tab.
4. Use the search box to search for EBF-12390.
5. Download the EBF archive file, which will have a filename like EBF-<number>.<os>.tar.gz.

Enable Big Data Management on a WANdisco-Enabled Cluster

Perform the following tasks to enable Big Data Management to run jobs on a WANdisco-enabled cluster:

1. Apply the downloaded patch to Big Data Management.
2. Enable Big Data Management on the cluster.

Apply the Big Data Management Software Patch

Apply the Big Data Management patch EBF-12390 to the nodes where the Data Integration System runs.

The Informatica patch archive includes an installer utility.

Apply the patch to each Informatica domain node:

1. Uncompress the patch archive file to the VM or node where the Informatica domain is installed.
2. Run the patch installer to apply the patch.
3. Restart the Data Integration Service.

Enable the Informatica Domain for the WANdisco-Enabled Cluster

Copy WANdisco Fusion .jar files to all machines that host the Data Integration Service:

1. On the cluster head node, browse to the following directory: `/opt/wandisco/fusion/client/lib` and copy the following files:
   On a Cloudera cluster, copy the following files:
   - hadoop-yarn-api-<version>-cdh<version>.jar

- hadoop-yarn-common-<version>-cdh<version>.jar
- hadoop-yarn-client-<version>-cdh<version>.jar

On a Hortonworks cluster, copy the following files:

- hadoop-yarn-api-<version>-hdp<version>.jar
- hadoop-yarn-common-<version>-hdp<version>.jar
- hadoop-yarn-client-<version>-hdp<version>.jar

2. Paste the .jar files in the following locations on each machine that hosts the Data Integration Service:
   - To run jobs using the Blaze engine, paste the .jar files to `<Informatica home>/services/shared/hadoop/<distribution version>/lib`.
   - To run jobs using the Spark engine, paste the .jar files to `<Informatica home>/services/shared/spark/<Spark version>/lib`.
3. Recycle the Data Integration Service on each node.
