Preface

Use the *Axon Data Marketplace User Guide* to learn how to find and get access to curated data collections in the Axon Data Marketplace.

Data owners prepare data sets that can be used to make business decisions, and the Axon administrator publishes the data sets from Axon Data Governance to the Axon Data Marketplace.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Network

The Informatica Network is the gateway to many resources, including the Informatica Knowledge Base and Informatica Global Customer Support. To enter the Informatica Network, visit https://network.informatica.com.

As an Informatica Network member, you have the following options:

- Search the Knowledge Base for product resources.
- View product availability information.
- Create and review your support cases.
- Find your local Informatica User Group Network and collaborate with your peers.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Product Availability Matrices

Product Availability Matrices (PAMs) indicate the versions of the operating systems, databases, and types of data sources and targets that a product release supports. You can browse the Informatica PAMs at https://network.informatica.com/community/informatica-network/product-availability-matrices.

Informatica Marketplace

The Informatica Marketplace is a forum where you can find solutions that extend and enhance your Informatica implementations. Leverage any of the hundreds of solutions from Informatica developers and partners on the Marketplace to improve your productivity and speed up time to implementation on your projects. You can find the Informatica Marketplace at https://marketplace.informatica.com.

Informatica Global Customer Support

You can contact a Global Support Center by telephone or through the Informatica Network.

To find your local Informatica Global Customer Support telephone number, visit the Informatica website at the following link:
https://www.informatica.com/services-and-training/customer-success-services/contact-us.html.

To find online support resources on the Informatica Network, visit https://network.informatica.com and select the eSupport option.

CHAPTER 1

Getting Started With Data Marketplace

This chapter includes the following topics:

- Data Marketplace Overview, 7
- Prerequisites, 8
- Launch Data Marketplace, 8
- Understanding Terms, 8
- How Data Marketplace Works, 9

Data Marketplace Overview

Axon Data Marketplace is the space where you can publish data collections for business use and find data collections that other users in your organization have published. If you are the owner of a data set in Axon, you can make the data available for others on a self-service basis from the Data Marketplace interface. Similarly, if you want to use the data published by other members in your organization, you can request for access to the data on a self-service basis.

In Axon Data Governance, you can add governance metadata so that your data is relevant, current, authenticated, authorized, reliable, and secure. Axon helps you determine the following governance characteristics of the data:

- Relevance. The glossary tag, **Axon Status** field, and **Lifecycle** field of the data indicate whether the data is ready for use.
- Timeliness. The history of the data objects indicates whether the data is up-to-date or old.
- Authentication. The stakeholders associated with the data indicates the roles of the people that have created and maintained the data.
- Authorization. The **Axon Viewing** field of the data indicates whether the right people have access to the data.
- Reliability. The data quality scores of the data set attributes indicate the quality of the data.
- Security. The **Security Classification** and **CIA Rating** fields indicate the security of the data.

Based on the common shopping cart experience, the self-service functions of the Data Marketplace provide autonomy to find and request access to data collections. Axon users that have the relevant permissions can use the data to make business decisions.

Prerequisites

Before you use the Axon Data Marketplace, make sure that the Axon Admin or SuperAdmin user configures the Axon Data Marketplace.

For administrator tasks, see the *Configuring Data Marketplace* chapter in the *Axon Data Governance Data Marketplace Administrator Guide*.

Launch Data Marketplace

You can access Data Marketplace through a URL and view data collections. You need to enter your login details to request an access to the data collections in the Data Marketplace.

The **Data Marketplace** home page displays a tile view of the data collections. The page displays maximum of 16 tiles. Tiles show the number of data consumers who have access to the data collections. Tiles are arranged in descending order according to the number of consumers. The home page also displays the categories in which data collections are arranged in your organization.

You can also launch **Data Marketplace** from the Axon toolbar. Click the **Data Marketplace** menu in the Axon toolbar to open the Data Marketplace.

In a browser tab, you can view either Data Governance or Data Marketplace. If you select **Data Governance** in the Axon toolbar, the browser page changes to Data Governance.

Understanding Terms

To understand how to publish and search for data collections in Axon Data Marketplace, you must be familiar with the following terms:

Access Request

A request made by a data consumer to a data owner to get access to a data collection.

Category

A predefined classification in the Data Marketplace where the Data Marketplace Administrator can publish data sets and create data collections. A category is a grouping of several related data collections.

For example, if a Data Marketplace Administrator wants to publish employee policy documents to the Data Marketplace, the most suitable category for the documents might be "Human Resources".

Data Collection

A data set that has a meaningful name and description in the Data Marketplace.

For example, the HR team in an organization publishes all employee policy documents to the Data Marketplace as an "Employee Claims Made to the Company Health Plan" collection.

Delivery Option

The means by which the technical owner grants the data consumer access to the requested data. The delivery option mainly comprises the data format, the delivery method, and the data location.

For example, a technical owner specifies the delivery option as a Microsoft Excel file that is shared on a common FTP location within the organization.

Fulfillment

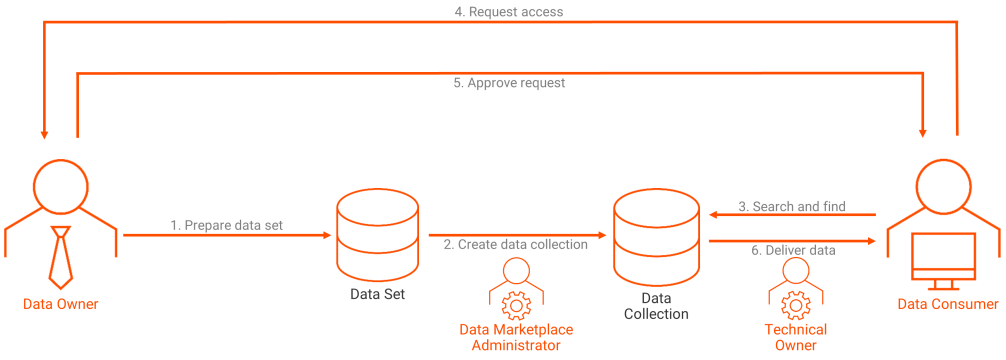

The process of delivering data to a data consumer.

For example, if a technical owner grants secure database access to a data consumer, the request is considered as fulfilled.

How Data Marketplace Works

In Axon Data Governance, a data owner can curate data sets so that the Data Marketplace Administrator can publish the data sets to the Data Marketplace as data collections. Business users who are interested in using the data can request access to the data from the Data Marketplace. The data owner reviews the access requests and approves or rejects each request. If the data owner approves a request, the technical owner delivers the data to the data consumer.

The following diagram represents the workflow to publish and get access to data from the Data Marketplace:

1. The data owner prepares the data set that can be used for business purposes by data consumers.
2. The Data Marketplace Administrator publishes the data set to the Data Marketplace as a data collection.
3. The data consumer searches the Data Marketplace and finds the data collection.
4. The data consumer requests access to the data from the data owner.
5. The data owner approves the request.
6. The technical owner delivers the data to the data consumer.

To understand all the user profiles in the Data Marketplace and the tasks associated with the users, see Chapter 2, “User Profiles and Tasks” on page 11.

Example

In an organization that manufactures small cars, Steve is the data steward for the marketing team. The marketing team analyzes the market and creates charts for demand trends. Steve has maintained his team's

research data in Axon and tagged the data with up-to-date Axon values. The marketing team decides to make the data for demand trends available to other teams in the organization. Steve identifies the data sets in Axon that might be useful for other teams, and attaches the relevant terms and conditions to the data sets. The data is now ready for use by other business teams in the organization. Steve is the **Data Owner** of the data.

The **Data Marketplace Administrator** publishes the data sets to the "Demand Trends" collection within the "Marketing" category of the Data Marketplace. Steve also adds a descriptive note to the collection so that other users of the Data Marketplace might find it easily.

Jane is an operations manager in the organization. She wants to analyze the customer demand for cars so that she can identify seasonal patterns and adjust the volume of production. She searches for "demand" in the Data Marketplace, and sees the "Demand Trends" collection that the Data Marketplace Administrator has published. Jane selects the data collection, sees the list of data sets, and decides that she needs this data for her analysis. Jane is the **Data Consumer** for the data.

Jane uses the checkout process in the Data Marketplace to request for access to the data. Steve can see in the Data Marketplace that Jane wants access to the data. Steve approves Jane's request.

Peter is the database administrator for the marketing team, and he is the designated **Technical Owner** for the data in Axon. Peter can see in the Data Marketplace that Steve has approved Jane's request for the marketing data. Peter grants Jane access to the data. After delivering the data to Jane, Peter marks the order as fulfilled in the Data Marketplace.

The order is now fulfilled. Axon maintains a history of this order. Jane can use the demand trend charts to optimize inventory, avoid wastage, and reduce costs. After the analysis is complete, Jane can inform Steve that she no longer needs access to the data. Steve revokes Jane's access, and Peter can remove Jane's access to the data.

CHAPTER 2

User Profiles and Tasks

This chapter includes the following topics:

- User Profiles in Axon Data Marketplace, 11
- Data Consumer, 12
- Data Owner, 12
- Technical Owner for a Data Collection, 14
- Default Technical Owner of the Data Marketplace, 15
- Data Marketplace Administrator, 16
- Axon SuperAdmin, 17

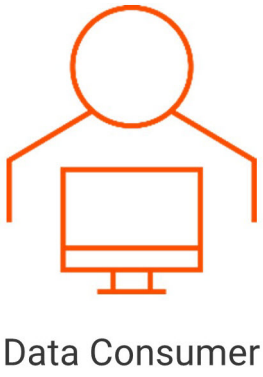

User Profiles in Axon Data Marketplace

The following types of users can publish data, access data, and perform actions in the Data Marketplace:

- Data Consumer
- Data Owner
- Technical Owner for a Data Collection
- Default Technical Owner of the Data Marketplace
- Data Marketplace Administrator
- Axon SuperAdmin

Data Consumer

The data consumer is an Axon Data Governance user who wants to use a data collection that is published to the Data Marketplace by a data owner. The data consumer must find the data collection and request access from the data owner. Any user in Axon Data Marketplace can be a data consumer.

For example, if a manager in an organization requests access to all the employee hire date data set, the manager is a data consumer.

I am a Data Consumer. What can I do?

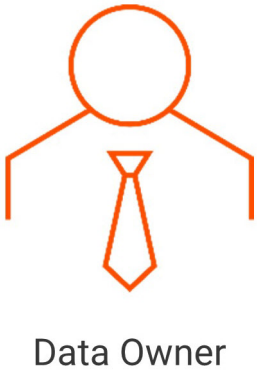

The following table lists the tasks that a data consumer can do:

Task	Topic
Find a data collection and view its details	See "Search, View, and Enrich Data Collections" on page 19.
Request access to a data collection	See "Request Access to a Data Collection" on page 29.
Cancel access request to a data collection	See "View List of Requested Data Collections" on page 32.
View a requested data collection	See "View List of Requested Data Collections" on page 32.
View a delivered data collection	See "View List of Accessed Data Collections" on page 34.

Data Owner

When the Data Marketplace Administrator publishes data sets from Axon Data Governance to the Data Marketplace, all the stakeholders for the data sets become the data owners for the data collections. The stakeholders make the data available for other Axon users who might need the data to make business

decisions. Typically, the data owner is a data steward who onboards data sets to Axon, manages the data assets inventory, and defines the quality of the data asset.

For example, if the data steward of the HR team in an organization is a stakeholder for the employee hire date data sets to the Data Marketplace, the data steward is a data owner.

I am a Data Owner. What can I do?

The following table lists the tasks that a data owner can do:

Task	Topic
Connect a data set to policies via systems and glossaries	See the *Connect Objects* topic in the *Create and Edit Objects* chapter of the *Axon Data Governance User Guide*.
Prepare a data set in Axon Data Governance for publishing to the Data Marketplace	See "Prepare Data Sets for Publishing" on page 37.
View a data collection that is published from Axon Data Governance to the Data Marketplace	See "View Published Data Collections" on page 40.
Assign delivery targets for a data collection	See "Publish Data Sets as Data Collections" on page 38.
Modify the properties of a data collection	See "Edit Data Collections" on page 44.
View access requests to a data collection	See "View Access Requests to Data Collections" on page 47.
Approve or reject access requests to a data collection	See "Approve or Reject a Data Access Request" on page 48.
Request to revoke access to a data collection	See "Withdraw Access to a Data Collection" on page 50.

Technical Owner for a Data Collection

The technical owner is a user who has the technical rights to a data collection. The technical owner is responsible for delivering the data sets of a data collection to a data consumer.

For example, if the data consumer wants access to a database, the technical owner might be a database administrator who can grant secure access to the database. If the data consumer wants access to a spreadsheet, the technical owner might send the spreadsheet file to the data consumer by email.

Depending on the access request, the technical owner might be the same user as the data owner.

Modify a data collection to specify the technical owner for the collection. For more information, see "Edit Data Collections" on page 44.

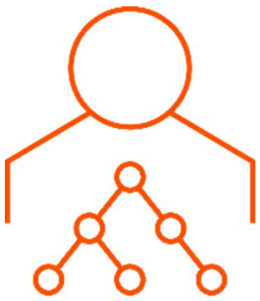

I am the Technical Owner for a data collection. What can I do?

The following table lists the tasks that the technical owner of a data collection can do:

Task	Topic
Modify the properties of a data collection	See "Edit Data Collections" on page 44.
View access requests to a data collection	See "View Access Requests to Data Collections" on page 47.
Reject access requests to a data collection	See "Approve or Reject a Data Access Request" on page 48.
Deliver requested data to a data consumer	See "Fulfill a Data Access Request" on page 49.
Configure default delivery target to deliver data	see the *Configure Delivery Options* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.

Default Technical Owner of the Data Marketplace

The default technical owner is an Axon user who has the technical rights to all data collection. The default technical owner is responsible for delivering the data sets of any data collection to a data consumer.

Default Technical Owner of the Data Marketplace

Go to the Admin Panel to assign default technical owners for the Data Marketplace. For more information, see the *Enable Data Marketplace and Assign Users* topic in the *Axon Data Governance* .

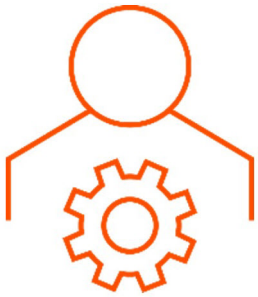

I am a default Technical Owner for the Data Marketplace. What can I do?

The following table lists the tasks that the default technical owner of the Data Marketplace can do:

Task	Topic
View a data collection that is published from Axon Data Governance to the Data Marketplace	See "View Published Data Collections" on page 40.
Modify the properties of a data collection	See "Edit Data Collections" on page 44.
Reject access requests to a data collection on behalf of the data owner	See "Approve or Reject a Data Access Request" on page 48.
Deliver requested data to a data consumer	See "Fulfill a Data Access Request" on page 49.
Assign the Data Marketplace administrators and default technical owners to the data collections	See the *Assign Users and Specify Default Terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.
Configure the term of use message and policy information	See the *Assign Users and Specify Default Terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*
Configure available data delivery formats and methods	See the *Configure Delivery Options* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.
Configure default delivery target to deliver data	See the *Configure Delivery Options* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.

Data Marketplace Administrator

The Data Marketplace Administrator is the owner of all data collections and can perform administrative tasks.

Data Marketplace Administrator

Go to the Admin Panel to assign users with the Administrator profile in the Data Marketplace. For more information, see the *Enable Data Marketplace and Assign Users* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.

I am a Data Marketplace Administrator. What can I do?

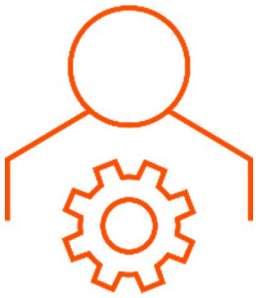

The following table lists the tasks that the Data Marketplace Administrator can do:

Task	Topic
Configure available data delivery formats and methods	See the *Configure Delivery Options* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.
Configure default delivery target to deliver data	See the *Configure Delivery Options* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.
Create or update the category of a data collection	See the *Create or Modify Categories for Data Collections* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.
Assign the Data Marketplace administrators and default technical owners to a data collection	See the *Assign Users and Specify the Default terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*
Configure the term of use message and policy information	See the *Assign Users and Specify the Default terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*
Publish a data set from Axon Data Governance to the Data Marketplace as a data collection	See "Publish Data Sets as Data Collections" on page 38.
View a data collection that is published from Axon Data Governance to the Data Marketplace	See "View Published Data Collections" on page 40.

Task	Topic
Modify the properties of a data collection	See "Edit Data Collections" on page 44.
Reject access requests to a data collection on behalf of the data owner	See "Approve or Reject a Data Access Request" on page 48.
Request to withdraw access to a data collection	See "Withdraw Access to a Data Collection" on page 50.

Axon SuperAdmin

All SuperAdmin users in Axon Data Governance are also SuperAdmin users in the Data Marketplace.

Axon SuperAdmin

I am an Axon SuperAdmin user. What can I do?

The following table lists the tasks that an Axon SuperAdmin user can do:

Task	Topic
Enable Data Marketplace in the Axon interface, and assign Data Marketplace administrators and default technical owners	See the *Enable Data Marketplace* and *Assign Users and Specify Default Terms of Use* topics in the *Axon Data Governance Data Marketplace Administrator Guide*.
Create or update the category of a data collection	See the *Create or Modify Categories for Data Collections* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.
Configure the term of use message and policy information	See the *Assign Users and Specify the Default terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.

Task	Topic
Publish a data set from Axon Data Governance to the Data Marketplace as a data collection	See "Publish Data Sets as Data Collections" on page 38.
View a data collection that is published from Axon Data Governance to the Data Marketplace	See "View Published Data Collections" on page 40.

CHAPTER 3

Find and Access Data

This chapter includes the following topics:

- Access Data Overview, 19
- Search, View, and Enrich Data Collections, 19
- View Categories and Subcategories, 28
- Request Access to a Data Collection, 29
- Request Access to a New Data Collection, 31
- View List of Requested Data Collections, 32
- Add Comments to Orders and Consumer Access, 33
- Add Comments to a Data Collection Request, 34
- View List of Accessed Data Collections, 34

Access Data Overview

Search for data collections in the Data Marketplace that you can use to make business decisions. When you find a suitable data collection, enter a business justification, accept the attached policies and usage guidelines, and request access to the data sets.

Search, View, and Enrich Data Collections

Search for data collections in the Data Marketplace to find data assets that you can use to make effective business decisions.

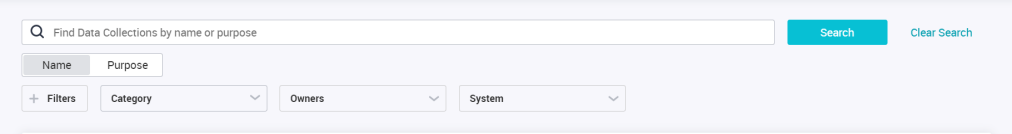

1. Launch Data Marketplace and go to the **Search** tab.

   The Data Marketplace search page displays the data collections that the data owners have published.
2. In the search box, enter a search term for the data that you want to find, and click **Search**.

   You can enter text within the limit of 1000 characters.

   The page displays the search term and all data collections that match your search terms.
3. To include definitions of the data sets in your search, select the **Purpose** button.

4. To filter the search results, click **Filters**. You can use filters if you want to see data sets that are associated to specific facet objects in Axon.
   For example, if you want to search for customer risk data that has been published by John, you can search for the term `Risk`, select `CRR` in the **System** facet, and select `John` in the **Owners** field.

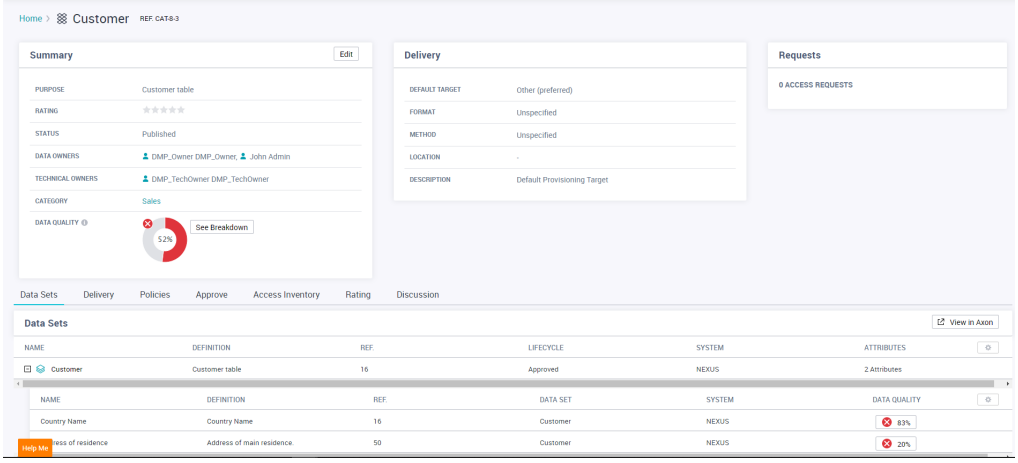

5. In the list of filter options, select the check boxes for different options so that you can narrow or widen your search results.
6. Click the **Filters** and select fields from the dropdown list.

   You can remove the selected fields according to your search criteria. You can select all the fields from the dropdown list.
7. Select options in the dropdown list of the selected fields.
8. Click **Search**.
   For example, you can select **Rating**, **Owners**, **System**, and **Category** fields options in the **+ Filters** tab. Select `Marketing` in the **Category** field, `John` in the **Owners** field, `4 stars and above` in the **Rating** field, and `CRR` in the **System** field. Click **Search**.

   The **Category** field contains a `Subcategory` option. The `Subcategory` option is selected by default. You can clear the `Subcategory` option if you do not want to include your search term in the subcategories of the data collections.
9. To save the searches for reuse, click **Save Search**.

   You need to provide a name to save a particular search.
10. To delete a particular search, click **Clear Search**.
11. To run a specific search from a list of searches, click **Run Saved Search**.
12. Click a data collection name to see the details.
    The following image shows the example of the "Customer" data collection:

13. View the **Summary** section of the page to see the properties of the data collection. The page displays the following properties:

Field	Description
Purpose	Purpose of the data collection as defined by the data owner. Use this description to decide if you need the data to make business decisions.
Status	Status of the data collection. Data consumers can search and find data collections in the `Published` status. If the status is `Unpublished`, the data collection is hidden for data consumers. Data owners can find unpublished data collections in the **Data Collections** sub-tab of the **Data I Own** tab.
Data Owners	The users that are responsible for approving or rejecting access requests for the data collection.
Technical Owner	The user that is responsible for delivering the data to the data consumers.
Category	Category for the data collection.
Custom Fields	Appears if a SuperAdmin SuperAdmin, default technical owner, Data Marketplace Administrator has configured custom fields for data collections. Depending on the configuration, the custom fields can be mandatory or optional. **Note:** If the admin has configured custom fields, they appear only for new data collections, not for existing data collections.
Data Quality	Quality of the data in the data collection. Axon Data Marketplace retrieves and displays the quality if Axon is integrated with Informatica Data Quality. Click **See Breakdown** to see the parameters of the data quality score.
Rating	The overall rating of the data collection.

14. View the **Delivery** section of the page to see the delivery properties of the data collection. The page displays the following properties:

Field	Description
Target	Name of the delivery target for the data collection.
Status	Status of the delivery target. A delivery target in the `Active` status is available for use. A target in the `Inactive` status is unavailable.
Format	Format to deliver the data collection.
Method	Method to deliver the data collection.
Location	Location for delivering the data collection
Description	Description of the delivery target.

If you change the status of a default delivery target to `Inactive`, the **Delivery** section continues to display the same delivery target instead of showing the `Other` delivery target.

15. View the **Attachments** section of the page to see the sample data files added to the data collection.

A data user can view and download sample data files to understand the data collection.

Note: You must have one of the following user profiles to modify the **Attachments** section:

- Data Owner
- Technical Owner for a Data Collection
- Data Marketplace Administrator
- Default Technical Owner of the Data Marketplace

16. View the **Participants** section of the page to see the list of data owners, technical owners, and Data Marketplace administrators assigned to the data collection. You can also view the names of data consumers who have added their comments in the **Discussion** section of the page.
17. View the **Access** section of the page to see the access details, order details, and pending request details of the data collection.
18. In the **Access** table, click **Filters** and select fields from the dropdown list. You can remove the selected fields according to your search criteria.
19. To remove the filters applied to the **Access** table, click **Clear Filter**.
20. View the **Requests** section of the page to see the number of access requests and fulfillment requests for the data collection.

    Note: You must have one of the following user profiles to see the **Requests** section:

    - Data Owner
    - Technical Owner for a Data Collection
    - Data Marketplace Administrator
    - Default Technical Owner of the Data Marketplace
21. View the **Data Sets** tab of the page to see the data sets that are part of the data collection. The page displays the following properties:

Field	Description
Data Set Name	The data sets in Axon Data Governance that constitute the data collection in the Data Marketplace. The data sets represent the data assets for which the data consumer has requested access. Click  to see the attributes of the data sets.
Definition	Definition of the data sets in Axon Data Governance.
ID	Identification number
Ref.	Reference number of the data sets in Axon Data Governance.
Type	Type of the data sets in Axon Data Governance.
Attributes	Number of attributes for a data set.
Status	Active or inactive status of the data set.
Lifecycle	Lifecycle of the data set.
System	The Axon system that is linked to an attribute.
Glossary Name	The Glossary that is linked to an attribute.

Field	Description
Created by	The name of the data owner who has created the data set.
Created date	The date on which the data set is created.
Last Updated	The date when the data set was last updated.
Segments	The list of segments
Last Approved	The date on which the data access request was approved.

Note: An empty data collection does not contain any data set. A data consumer can, however, request access to an empty data collection.

22. To open the data sets in Axon Data Governance, click **View in Axon**. The data sets appear in a new tab.
23. View the **Delivery** tab of the page to see the available delivery options for the data collection. The page displays the following properties:

Field	Description
Target	Available delivery targets that the data owner has specified for the data collection.
Status	Active or inactive status of the delivery target.
Format	Delivery formats that the data owner has specified for the data collection.
Method	Delivery methods that the data owner has specified for the data collection.
Location	Locations of the data collections.
Description	Descriptions for the delivery targets.

24. To add the delivery options of a data collection, click **Add**.

Note: You must have one of the following user profiles to add the delivery options for a data collection:

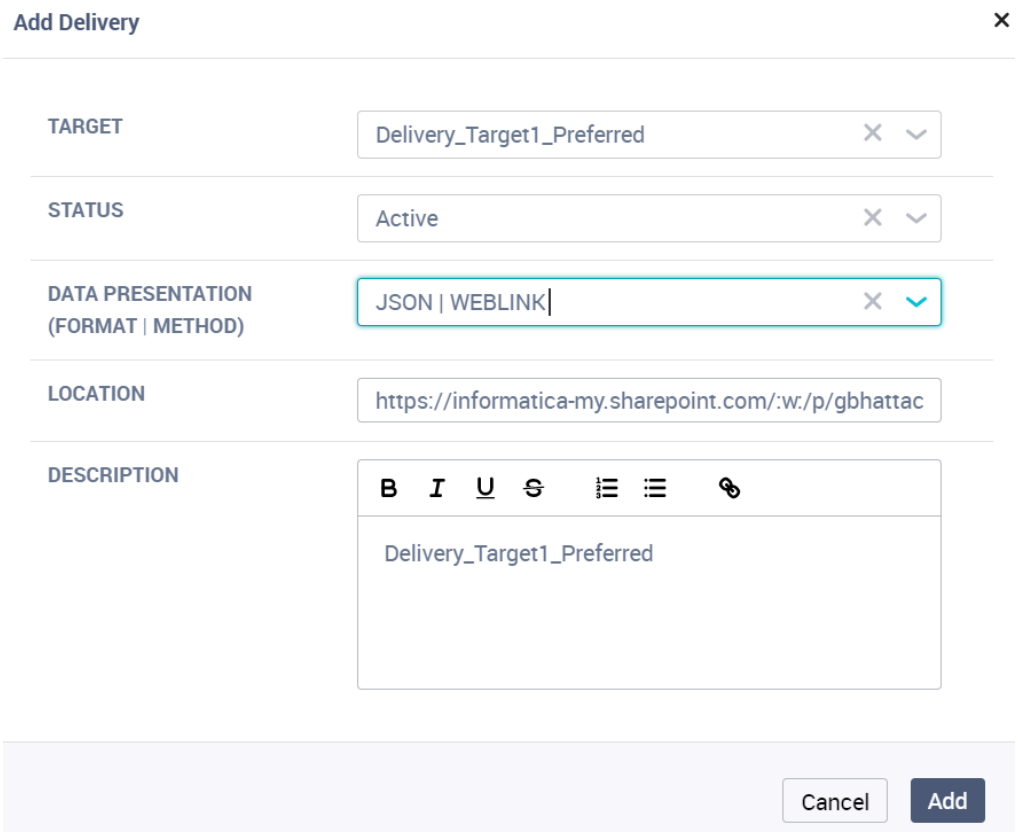

- Data Owner
- Technical Owner for a Data Collection
- Data Marketplace Administrator
- Default Technical Owner of the Data Marketplace

The **Add Delivery** dialog box appears for you to configure the following properties:

Field	Description
Target	Available delivery targets that the data owner has specified for the data collection.
Status	Active or inactive status of the delivery target.
Data Presentation (Format I Method)	Delivery format and method that the data owner has specified for the data collection.

Field	Description
Location	Locations of the data collections.
Description	Descriptions for the delivery targets.

The following image shows an example of the **Add Delivery** dialog box:

Click **Add**.

25. To modify the delivery properties of a data collection, click **...** and select **Edit** on the required delivery options.

    Note: You must have one of the following user profiles to see the **Status** field and **Edit** button for a data collection:

    - Data Owner
    - Technical Owner for a Data Collection
    - Data Marketplace Administrator
    - Default Technical Owner of the Data Marketplace

The **Edit Delivery** dialog box appears for you to configure the following properties:

Field	Description
Target	Available delivery targets that the data owner has specified for the data collection.
Status	Active or inactive status of the delivery target.
Data Presentation (Format I Method)	Delivery format and method that the data owner has specified for the data collection.
Location	Locations of the data collections.
Description	Descriptions for the delivery targets.

The following image shows an example of the **Edit Delivery** dialog box:

Figure 1.

Click **Save**.

Select a delivery target to mark it as the default target if you request access to the data collection.

26. View the **Policies** tab to see the policies and usage guide associated with the data collection. The page displays the following properties:

Field	Description
Policies	View the policies that are associated with the data collection. A data owner can attach a confirmation or information policy to a data collection. Confirmation policy requires data consumer to agree to the terms of use. Information policies requires data consumer to read and understand the terms of use without providing an agreement to their usage.
Usage Guide	View the guidelines that the data owner has specified for using the data collection. The Usage Guide section displays the policy that the Data Marketplace administrator, Axon SuperAdmin, or technical owner has specified for all the data collections. Confirmation policy requires data consumer to agree to the terms of use. Information policies requires data consumer to read and understand the terms of use without providing an agreement to their usage.

To specify the policy text, see the *Assign Users and Specify Default Terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.

27. Click the **Approve** tab to see the access requests. The page displays the following properties:

Field	Description
Order	Order number for fulfilling the data access request. Click the order number to see the timeline, summary, and delivery details of the order.
Consumer	Data consumer who has requested access to the data collection.
Ordered	Date on which the data consumer requested access to the data collection.
Data Collection	Data collection that the data consumer has requested.
Business Justification	Business justification of the data consumer to request access to the data.

Click ••• button to approve or reject the access request for the data collection.

28. In the **Approve** table, click **Filters** and select fields from the dropdown list. You can remove the selected fields according to your search criteria.
29. To remove the filters applied to the **Access** table, click **Clear Filter**
30. Go to the **Access** tab to view the access requests to the data collection that data consumers have made.

Note: To see the **Access** tab, you must be the data owner of the data collection or the Data Marketplace administrator.

Click ••• to request withdrawal or withdraw access to the data collections. For more information, see "Approve or Reject a Data Access Request" on page 48.

31. Click the **Fulfill** tab of the page to see the data collection requests that you fulfilled. The page displays the following properties:

Field	Description
Order	Order number for fulfilling the data access request. Click the order number to see the timeline, summary, and delivery details of the order.
Consumer	Data consumer who has requested access to the data collection.
Ordered	Date on which the data consumer requested access to the data collection.
Data Collection	Data collection that the data consumer has requested.
Business Justification	Business justification of the data consumer to request access to the data.

Note: To see the **Fulfill** tab, you must be the technical owner of the data collection or the default technical owner of the Data Marketplace.

32. Click the **Withdraw** tab to see the withdrawal request for the data collections.
33. View the **Discussion** tab of the page to read and add the comments to the data collection.

    New comments appears at the top of the **Discussion** section.
34. Click **Add Comment** to add your comments in the **Discussion** section.

    You can add your comment to the discussion thread or start a new discussion.

    The **Discussion** dialog box appears.
35. Write your comment and click **Save**.

    Your comment appears in the discussion section.
36. Click ••• to edit or delete the comments that you have added to the data collection.

    If you are the data owner or the Data Marketplace administrator, you can delete the comments that are added by other users.

    If you are a data consumer, you can edit or delete the comments that you have added in the **Discussion** section. If you edit your comment several times, the **Discussion** section displays the comment that you edited last.
37. View the **Rating** tab of the page to see and comment the rating details of the data collection in chronological order.

    If you are the data owner or data consumer of the data collection, you can rate your data collection.

    The **Rating** section displays the average rating and breakdown of the rating score.
38. Click **Add Rating** button in the **Rating** section.

    The **Ratings and Comments** form opens in the **Rating** section.
39. Choose your rating and add comments to the data collection. Click a star rating between 1 to 5 to rate the data collection.
40. Click **Save**.

    Your rating and comment appear in the **Rating** section.
    Once you submit your rating for the data collection, you cannot add or modify your rating again.
41. Click ⚙ button.

A pane displays the **Reset** button and **Download** button. You can view options to hide or show column names according to your requirement.
For example, you can choose to hide columns that contain details, such as owner and consumer. You can choose to show external ticket column.

42. To go back to the previous table settings, click **Reset**.
43. To download the table that contains hidden columns in a .csv file, click the **Download** button.

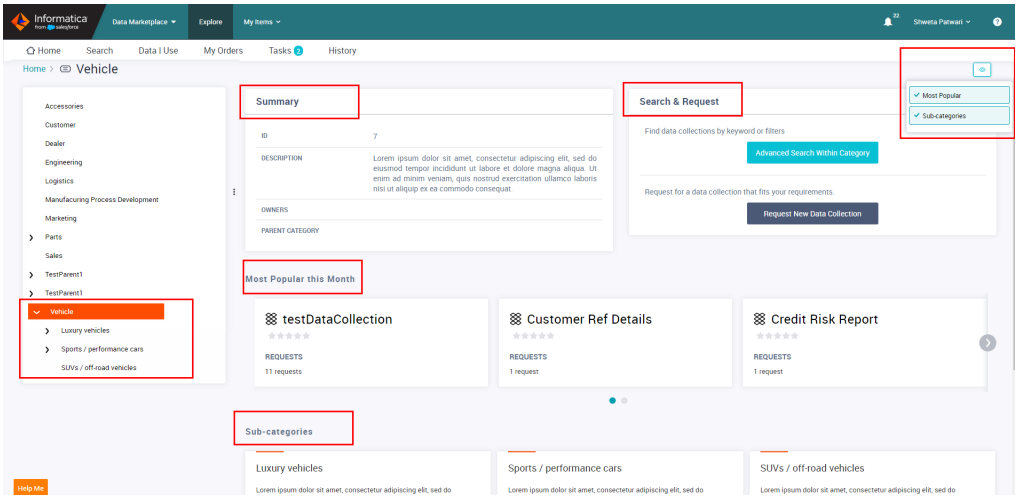

View Categories and Subcategories

A category is a grouping of several related data collections.

1. Launch Data Marketplace and go to the **Home** page.

   The page displays the categories in which data collections are arranged in your organization.
2. Click the category that you want to view.

   The category page displays the details of the category and the associated sub-categories. The path of the category appears as a link on the top of the page. The category owner, parent category owner, and Data Marketplace Administrator can view inactive categories and subcategories. Data collections from inactive categories and subcategories do not appear in the category page.
   The following image shows a sample category page:

3. The  button helps you to choose and highlight relevant information in the page, such as the most popular data collections and subcategories. You can select the options according to the requirements of your consumers and organization. You can choose not to select any item from the  menu.

4. The **Summary** section of the page displays the following properties:

Field	Description
ID	Unique identifier for the category or sub-category
Description	Details of the category.
Owners	Owners of the category.
Parent Category	Parent of the category.

5. In the **Search & Request** section of the page, click **Advanced Search Within Category** to search for data collections within the category.

   The page displays search results with appropriate **Category** filter applied to the search box.

6. If you want to request for a new data collection within a category, click **Request New Data Collection**.

   To request for a new data collection, see "Request Access to a New Data Collection" on page 31.

7. The **Data Collections** section displays all the data collections that are the part of the category in the tabular view.

8. Click the  icon to see options to view the data collections from the current category or from subcategories.

9. The left pane of the page provides tree view of the categories. You can expand the required category to view the subcategories.

10. To view the details of a subcategory, click the name of the subcategory.

11. If you are a category owner, you can change the name, description, status, parent, and owners of the category.

    If the category owners are not assigned, the Admin becomes the default owner of the category.

Request Access to a Data Collection

After you find a data asset that you need for use, you must request the data owner for access to the data.

You must have one of the following user profiles to perform this task:

- Data Consumer
- Data Owner
- Technical Owner
- Data Marketplace Administrator

1. Open the data collection for which you want to request access, and review the details of the data collection.

   To find a data collection, see "Search, View, and Enrich Data Collections" on page 19.

2. Click **Checkout**.

   The **Checkout** page for the data collection appears.

3. In the **Request Details** step of the checkout process, enter the following properties:

Field	Description
Business Justification	Brief description about your use of the data collection. The data owner reads this description to decide whether the access request to the data assets is valid.
Delivery Target	Select a delivery target for the data collection. You can select a delivery target based on the delivery method and format that appears here. The list of targets that appear here is specified by the data owner. To add a delivery target, see "Publish Data Sets as Data Collections" on page 38.
Delivery Requests	Optional. Enter additional notes for the request.

   The page also displays custom fields for data collections that the administrator has configured in the Data Marketplace settings panel. For information on configuring custom fields, see the *Configure Custom Fields* in the *Axon Data Governance Data Marketplace Administrator Guide*.

   You can edit the value of a custom field only while placing a data collection request. You cannot edit the value if the data collection request is completed, approved, fulfilled, or rejected. The custom field is available on the **Order Summary** page.

4. Click **Next**.

   The **Usage Guide** step of the data collection appears.

5. In the **Usage Guide** step of the checkout process, read and accept the policy for using the data collection.

   The Data Marketplace Administrator or Axon SuperAdmin user can specify this policy text in the Data Marketplace settings panel. The usage guide can contain multiple policies. For more information, see the *Assign Users and Specify Default Terms of Use* topic in the *Axon Data Governance Data Marketplace Administrator Guide*.

6. Click **Submit Order**.

   You have placed an access request for the data collection.
   The data owner receives the email notification that you have place an access request for the data collection.

7. In the **Order Submitted** step of the checkout process, review your order. Click **View Order** to view the details of the order.

8. To upload a file to the request, click **Edit** in the **Attachments** section.

Your request to access the data collection is complete. You can see your request on the **My Orders** page. The data owner or technical owner for the data collection can see your request in the **Requests** sub-tab of the **Tasks** tab. The Data Marketplace administrator can see your request in the **Request** sub-tab of the **History** tab.

Request Access to a New Data Collection

If you cannot find a data collection that matches your requirement, you can ask a data owner to publish a new collection according to your requirements.

To request for a new data collection, your administrator must enable this feature. For more information, see the *Disable Requests for New Data Collections* topic in the *Configuring Data Marketplace* chapter of the *Data Marketplace Administrator Guide*.

1. Open the data collection that looks similar to your requirement, and review the details of the data collection.

   To find a data collection, see "Search, View, and Enrich Data Collections" on page 19.

2. Click **Request New Data Collection**.

   The **Request New Data Collection** page appears.

3. In the **Request Details** step of the request process, enter the following property:

Field	Description
Business Justification	Brief description about your use of the data collection. The data owner reads this description to decide whether the access request to the new data collection is valid.

   You can configure custom fields to appear in the **Request New Data Collection** page, see *Configure Custom Fields* in the *Axon Data Governance Data Marketplace Administrator Guide*.
   You can edit the value of a custom field only while placing a data collection request. You cannot edit the value if the data collection request is completed, approved, fulfilled, or rejected. The custom field is available on the **Order Summary** page.

4. Click **Submit Request**.

   You have placed an access request for the new data collection. Axon generates a new request ID for the order.
   You will receive an email notification when a new requested data collection is available.

5. In the **Request Submitted** step of the request process, review your request. Click **View Request** to view the details of the request.

6. To see the status of your request, see the **Data Collection Request Summary** section. If the data owner approves your request, a link to the new data collection appears in the page.

7. To upload a file to the request, click **Edit** in the **Attachments** section.

Your request to access the new data collection is complete. You can see your request on the **My Orders** page.

- If you are a data owner or technical owner, you can see your request in the **Requests** sub-tab of the **Tasks** tab.
- If you are a data owner, technical owner, or Data Marketplace administrator, you can see your request in the **Request** sub-tab of the **History** tab.

If the data owner publishes a new data collection that meets your requirement, you can also search and find the data collection in the **Search** page.

View List of Requested Data Collections

If you are a data consumer, you can see the data collections for which you have requested access.

1. Launch Data Marketplace and go to the **My Orders** tab.

   The page displays the your orders. The orders are presented in the following views:

   - Tile view. The tile view shows up to 16 recently updated orders.
   - List view. The list view shows all the orders.

   tile mode and list mode.
2. The tiles are arranged in the most recent order.

   The order tile displays the following details:

   - Name of the data collection
   - Status of the order
   - Order ID
   - Order date
   - Last comment on the order
   - Name and title of the person who wrote the comment

   Data collections that are ordered recently might not have a comment section.
3. Click the **Orders** tab.

   The **Orders** section displays the following details:

Field	Description
Order	Order number for fulfilling the data access request.
Ordered	Date on which the data consumer requested access to the data collection.
Data Collection	Data collection that the data consumer has requested.
Business Justification	Business justification of the data consumer to request access to the data.
Status	Status of the order.

4. From the list of orders in the **Orders** tab, click an order ID to view the order details.

   The **Timeline** section displays the history of the order and the associated comments.
   The **Order Summary** section displays the highlights of the order. To understand the fields in this section, see "Search, View, and Enrich Data Collections" on page 19.

   The **Delivery** section displays the highlights of the data collection delivery.
5. Choose the **Custom Requests** view in the **Orders** section.

   The **Custom Requests** section displays the following details:

Field	Description
Request	Request ID for fulfilling the access request to the new data collection.

Field	Description
Requested	Date on which the data consumer requested access to the data collection.
Similar Data Collection	Data collection form which the data consumer has requested.
Business Justification	Business justification of the data consumer to request creation of the data.
Status	Status of the request.

6. From the list of requests in the **Custom Requests** tab, click a request ID to view the request details.

   The **Timeline** section displays the history of the request and the associated comments.
   The **Data Collection Request Summary** section displays the highlights of the request. The **Similar Data Collection** sub section displays the highlights of the data collection similar to the requested data collection. The **Requested Category** sub sections displays the details highlights of the category of the requested data collection.

7. From the list of orders and requests in the **My Orders** tab, click a data collection name to view its order details.

   To understand the properties of the data collection, see "Search, View, and Enrich Data Collections" on page 19. Depending on the status of the request, you can take the following actions on a data collection:

   - If your request is pending approval, click **Cancel Order** to cancel the request.
   - If your request is rejected, you can request access to the data again.

Add Comments to Orders and Consumer Access

A data owner, technical owner, or Data Marketplace administrator can request for a comment or agreement from any user for an order or consumer access object. If you are a stakeholder, you can add your comments or vote.

1. Launch Data Marketplace.
2. To add comments to an order, go to the **Tasks** > **Order Inputs** page. To add comments to a consumer access object, go to the **Tasks** > **Consumer Access Inputs** page.

   The page displays the list of orders that require your inputs.
3. Click an identifier.

   The page displays the timeline of your data access order.
4. To provide your inputs, click **Vote and Comment**.
5. If you want to add comments, enter your comments in the **Add Comments** field.
6. If you want to vote, click **Agree** or **Disagree**.

   Alternatively, you can also vote from the **Order Inputs** or **Consumer Inputs** page. Click the Actions Menu (•••) to select **Agree** or **Disagree**.
7. Click **Save**.

Add Comments to a Data Collection Request

A data owner, technical owner, or Data Marketplace administrator can request for a comment or agreement from any user for a data collection request. If you are a stakeholder, you can add your comments or vote.

1. Launch Data Marketplace.
2. To add comments to an order, go to the **Tasks** > **Data Collection Request Inputs** page.

   The page displays the list of data collection requests that require your inputs.
3. Click on a data collection request.

   The page displays the timeline of your data collection request.
4. To provide your inputs, click **Vote and Comment**.
5. If you want to add comments, enter your comments in the **Add Comments** field.
6. If you want to vote, click **Agree** or **Disagree**.

   Alternatively, you can also vote from the **Data Collection Request Inputs** page. Click the Actions Menu (•••) to select **Agree** or **Disagree**.
7. Click **Save**.

View List of Accessed Data Collections

If you are the data consumer, you can see the data collections for which you have received access.

You can view the accessed data collections in the tile view and list view. The tile view shows the data collections that you have received access recently. The tile view shows maximum of 16 data collections. The list view shows all the data collections for which you have received the access.

The  button helps you to choose and highlight relevant information in the page, such as page description, metrics, and recently added data sets. You can add and remove categories according to the requirements of your consumers and organization. You can choose not to select any item from the  menu.

1. Launch Data Marketplace and go to the **Data I Use** tab.

   The page displays the data collections that have been approved for you and delivered to you.
2. Hover the mouse over a tile to highlight the data collection.

   You can click the tile to view the details of the data collection.

   The tile contains the name of the data collection, access status, category, and fulfillment date.
3. Go to the **Access Details** section on the **Data I Use** page to view the following columns:

Field	Description
Data Collection	The data collection for which you have received access.
Purpose	Purpose of the data collection as defined by the data owner.

Field	Description
Target	Name of the delivery target for the data collection.
Access ID	Identification to access the data collection.
Status	Status of the data collection.
Fulfilled	Date on which the data consumer received access to the data collection.

4. From the list of data collections in the **Data I Use** tab, click an access ID to view the access details.

   The page displays the following sections:

Field	Description
Delivery	Delivery details of the data collection. To understand the fields in this section, see "Search, View, and Enrich Data Collections" on page 19.
Timeline	History of the access order and the associated comments.
Order Summary	Details of the access request order and data delivery. To understand the fields in this section, see "Search, View, and Enrich Data Collections" on page 19.

   If the Access Detail page does not have associated order details, click the data collection name to view data collection. You can raise the access request.

CHAPTER 4

Create Data Collections

This chapter includes the following topics:

- Data Collections Overview, 36
- Approve or Reject a Data Collection Request, 36
- Prepare Data Sets for Publishing, 37
- Publish Data Sets as Data Collections, 38
- View Published Data Collections, 40
- View Ordered Data Collections, 41
- Edit Data Collections, 44

Data Collections Overview

A data collection is a data set that the Data Marketplace Administrator has published from Axon Data Governance to the Data Marketplace. A data collection comprises a data set that has a meaningful name and a preferred delivery method. When the Data Marketplace Administrator publishes a data set, the data assets are available for other users so that they can search and request access to it.

Approve or Reject a Data Collection Request

When a data consumer requests a new data collection, you can approve or reject the request.

To approve or reject a request, you must have one of the following user profiles:

- Data owner of a data collection
- Data Marketplace administrator
- Technical owner of a data collection

1. Launch Data Marketplace, and go to the **Tasks** tab.
2. Click the **Data Collection Request Inputs** sub-tab to see the data collections requests that are waiting for your approval.
3. In the list of requests, click **Approve** to approve the access request, or click **Reject** to reject the request.

   A dialog box appears, where you can enter details to approve or reject the request.

4. Enter the following details to approve or reject the request:

Field	Description
Add Comment	Enter a comment about the fulfilment of the request.
Created Data Collection	Select the newly created data collection from a list of several other data collections.

5. Click the **Approve** or **Reject** button to complete the task.
6. In the list of requests, you can click on a data collection request to view more details.

   The page displays the timeline, summary, and other details of the data collection request.
7. In the **Timeline** section of the data collection request details page, you can see the history of interactions for the request. Click **Add Comment** to add a comment to the request.
8. If you are a Data Marketplace Admin or data owner, mention data users by their names and request them to provide inputs on a data collection request when the request is in pending status. To tag a data user, type `@` and enter a user name, or select a user name from the popup list.

   For each stage of the data collection request, you can ask for a comment from a user.
9. Click **Comment** or **Agree or Disagree**.

   An information panel appears to indicate the request for a comment or an agreement from the data user.
10. Click **Save**.

    A notification is sent to all participants of the review request. A data user can add comments or vote to register a response. If you are a participant in the review request, you can view request for inputs in the **Data Collection Request Inputs** sub-tab of the **Tasks** tab. The page displays the list of data collection requests and associated request for inputs. If you are a data consumer and you are participant of the review request, click ••• to select **Agree** or **Disagree** button.
11. In the **Timeline** section of the data collection request details page, click **Approve** to approve the request, or click **Reject** to reject the request.

The data access request is complete.

Prepare Data Sets for Publishing

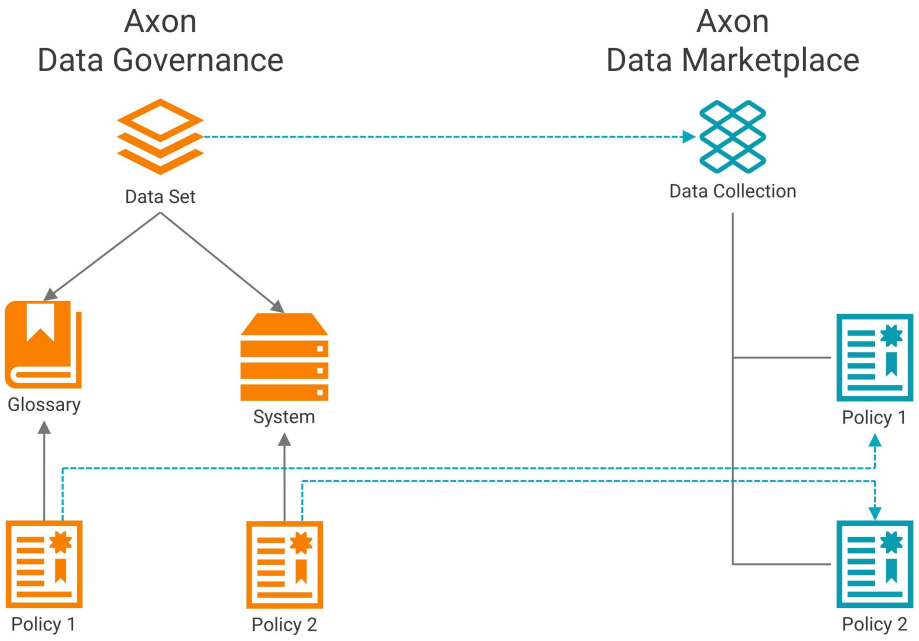

Before you publish a data set from Axon Data Governance to the Axon Data Marketplace, you must prepare the data set by adding helpful details and connecting the relevant policies.

This task must be performed by the data owner. Consider the following guidelines to prepare the data sets:

1. **Get the data sets ready.** In Axon Data Governance, verify the attributes of the data set to make sure that the data consumers have useful data to make business decisions.
   To create or modify a data set, see the *Data Set Properties* topic in the *Create and Edit Objects* chapter of the *Axon Data Governance User Guide*.
2. **Create the relevant policies and usage guidelines.** In Axon Data Governance, create the relevant policies and usage guidelines that apply to the data collection. To create a policy in Axon, see the *Policy Properties* topic in the *Create and Edit Objects* chapter of the *Axon Data Governance User Guide*.
   The policies are displayed in the checkout page when the data consumer requests access to a data collection. To mark a policy as a usage guideline, you must create an Axon Policy object that is of the `EULA_Information` or `EULA_Confirmation` type.

3. **Attach the policies to the data sets.** In Axon Data Governance, link the Policy objects to the data set. In Axon Data Marketplace, the linked policies are automatically retrieved and displayed for the data collection.
   You cannot link a Policy object directly to a Data Set object. You can instead link a Data Set object to a Glossary or System object, and link the System or Glossary object to the Policy object.

   The following image shows how you can display a policy for a data collection:

   To connect Axon objects, see the *Connect Objects* topic in the *Create and Edit Objects* chapter of the *Axon Data Governance User Guide*.

4. **Decide on the delivery options.** Determine the delivery targets that you want to use to deliver the data collection. When you publish a data set, the data set appears in the Data Marketplace with the default delivery target. You must modify the delivery target so that data consumers who search for your data collection can see your preferred target.
   To modify the delivery targets, see "Publish Data Sets as Data Collections" on page 38.

Publish Data Sets as Data Collections

You can publish data sets from Axon Data Governance to the Data Marketplace. When you upload data sets, you make them available as data collections.

To display policies for data collections, the data set owners in Axon must connect the Axon data sets to Axon policies through the System or Glossary objects.

The Axon SuperAdmin must enable Data Marketplace from the Axon Admin Panel. For more information, see the *Configure Data Marketplace* topic in the *Axon Data Governance Administrator Guide*.

You must have one of the following user profiles to perform this task:

- Axon SuperAdmin

- Data Marketplace Administrator

1. In Axon Data Governance, go to Unison Search and select the **Data Sets** facet.

   The page displays the list of data sets that are available in Axon.

2. Select one or more data sets, and click **Bulk Publish**. The data sets must belong to only the Enterprise segment.

   The **Bulk Publish** page appears.

3. Click **Category** to select a category for the data sets.

   The category picker appears.

4. Select a category from the category picker, and click **Close**.

5. In the **Numbering Prefix** field, enter a prefix for the data collection. The prefix is a reference identifier for the data collection in the Data Marketplace.

   Axon Data Governance publishes the data sets to the Data Marketplace as data collections. You can see the status of the publish operation in the **Notifications** center of the Axon toolbar.

6. From the Axon toolbar, go to Axon Data Marketplace.

7. Search and open the data collection that you just published, and go to the **Delivery** tab. To find a data collection, see "Search, View, and Enrich Data Collections" on page 19.

   The **Delivery Options** displays the default delivery target that the Data Marketplace administrator or technical owner has configured.

8. Click **Add** to add a new delivery target. Configure the following properties for the delivery target:

Option	Description
Target	Name of the delivery target.
Status	Select `Active` to make the delivery target available for use. Select `Inactive` to make the delivery target unavailable.
Format	Select the format to deliver the data collection. The options you see here are configured by the Data Marketplace Administrator or Axon SuperAdmin user. For more information, see *Configure Delivery Options* in the *Axon Data Governance Data Marketplace Administrator Guide*.
Method	Select the method to deliver the data collection. The options you see here are configured by the Data Marketplace Administrator or Axon SuperAdmin user. For more information, see *Configure Delivery Options* in the *Axon Data Governance Data Marketplace Administrator Guide*.
Location	Location for delivering the data collection.
Description	Description for the data collection. Enter a description that helps the data consumers understand the delivery target.

9. Click **Save** to save the delivery target. You can click **Add** in the **Delivery Options** section to add more delivery targets for the data collection. Click **Edit** to modify the delivery properties of a data collection.

10. In the **Delivery** tab of the data collection, select a delivery target to specify the target as the default delivery option.

View Published Data Collections

You can view the list of all data sets that you have published to the Data Marketplace as data collections. You can view popular or most requested data collections in the tile mode on the top of the page.

You must have one of the following user profiles to perform this task:

- Data owner of the data collection
- Data Marketplace Administrator
- Default technical owner of the Data Marketplace

1. Launch Data Marketplace and go to the **Data I Own** tab.

   The page displays the data collections in the tile view and list view.
2. To view popular data collections in tile view, click toggle button and select **Trending**.

   You can see four tiles at a time on the top of the **Data I Own** page.

   The page displays popular data collection tiles. The data collection tiles contain name of the data collections, rating, data quality details, and number of requests placed for the data collection. The tiles are arranged in ascending order of the number of requests.
3. To go to the next or previous set of tiles that is not visible on the page, click the forward arrow or back arrow buttons.

   The page displays a maximum of 16 data collections in the tile view.
4. Hover the mouse over a tile.

   The name of the data collection on the tile is highlighted.
5. To view the data collection, click the highlighted tile.

   The page displays the details of the data collection.
6. The **Data I Own** page displays the following columns:

Column	Description
Name	Name of the data collection.
Ref.	Reference number of the order fulfillment.
Purpose	The description of the data collection.
Category	Category in the Data Marketplace where the data sets of the collection are published.
Approve	Number of access request that are waiting for approval. Available for data owner of the data collection and Data Marketplace Administrator
Fulfill	Number of access request that are waiting for fulfillment. Available for technical owner and Data
Withdraw	Number of access request that are pending for withdrawal. Available for default technical owner and Technical owner of the data collection.

7. Click a data collection name to view its details. To understand the properties of the data collection, see "Search, View, and Enrich Data Collections" on page 19.

View Ordered Data Collections

You can view the list of all data sets that you have ordered from the Data Marketplace as data collections. If you are a data owner or the default technical owner, the **History** tab displays the status of the ordered data sets across all the data collections at one place. If you are a category owner, you can access the category-based data collection requests from the **History** > **Custom Requests** page.

You must have one of the following user profiles to perform this task:

- Data owner of the data collection
- Data Marketplace Administrator
- Default technical owner of the Data Marketplace
- Technical Owner of the data collection

1. Launch Data Marketplace and go to the **History** tab.

   The page displays the data collections that are ordered and requested by the data consumer. You can also view data collections that are approved by the data owner or technical owner.

2. Click the **Access** sub-tab of the **History** tab to view the access details of the approved data collections.

   The page displays the following columns:

Column	Description
Access	Access ID.
Consumer	The data user that ordered the data collection.
Data Collection	The data collection that is approved.
Business Justification	Brief description about your use of the data collection.
Category	Category in the Data Marketplace where the data sets of the collection are published.
Access Granted	Date on which the data collection is approved.
Status	Status of the data collection. Your ordered data collection can be in one of the following statuses: - Available - Withdrawn - Pending Withdrawal

3. To filter the data collections that are approved by the data owner, click **Filters**.

   The page displays the dropdown list of fields.

4. In the dropdown list, select the check boxes for different fields so that you can narrow or widen your search results.

   You can remove the selected fields according to your search criteria. You can select all the fields from the dropdown list.

5. Select options in the dropdown list of the selected fields.

6. Click **Filter**.

   For example, you can select **Data Collection**, **Category**, and **Status** field options in the **+Filters** tab. Select `Customer` in the **Data Collection** field, `Sales` in the **Category** field, and `Available` in the **Status** field.

7. To remove filters applied to the **Access** table, click **Clear Filter**.

8. Click the **Order** sub-tab of the **History** tab to view the list of requested data collections.

   The page displays the following columns:

Column	Description
Order	Order ID.
Consumer	The data user that ordered the data collection.
Ordered	Date on which the data collection is ordered.
Data Collection	The data collection that is ordered.
Business Justification	Brief description about your use of the data collection.
Category	Category in the Data Marketplace where the data sets of the collection are published.
Status	Status of the data collection. Your ordered data collection can be in one of the following statuses: - Pending Approval - Fulfillment Stage - Order Cancelled - Access Rejected - Order Fulfilled

9. If you are the Data Marketplace administrator, you can click the icon to change the **Pending Approval** status.

   Choose one of the following options:

   - Reject
   - Approve

   The data user receives the email notification stating that the request is approved or rejected.

10. To filter the orders, click **Filters**.

    The page displays the dropdown list of fields.

11. In the dropdown list, select the check boxes for different fields so that you can narrow or widen your search results.

    You can remove the selected fields according to your search criteria. You can select all the fields from the dropdown list.

12. Select options in the dropdown list of the selected fields.

13. Click **Filter**.

    For example, you can select **Ordered**, **Data Collection**, **Category**, and **Status** field options in the **+Filters** tab. Select `Customer` in the **Data Collection** field, `Sales` in the **Category** field, `Today` in the **Ordered** field, and `Available` in the **Status** field.

14. To remove filters applied to the **Order** table, click **Clear Filter**.

15. Click the **Request** sub-tab of the **History** tab to view the list of the requests from data users for the new data collections.

The page displays the following columns:

Column	Description
Request	Request ID.
Consumer	The data user that ordered the data collection.
Requested	Date on which the data collection is requested.
Similar Data Collection	The data collection similar to the data collection that is requested.
Business Justification	Brief description about your use of the data collection.
Category	Category in the Data Marketplace where the data sets of the collection are published
Status	Status of the data collection. Your requested data collection can be in one of the following statuses: - Pending Approval - Rejected - Fulfilled

16. To filter the request from consumers for new data collections, click **+ Filters**.

    he page displays the dropdown list of fields.

17. In the dropdown list, select the check boxes for different fields so that you can narrow or widen your search results.

    You can remove the selected fields according to your search criteria. You can select all the fields from the dropdown list.

18. Select options in the dropdown list of the selected fields.

19. Click **Filter**.

    For example, you can select **Consumer**, **Similar Data Collection**, **Category**, and **Status** field options in the **Filters** tab. Select `John Admin` in the **Consumer** field, `Customer ID` in the **Category** field, `Local Customer Data` in the **Similar Data Collection** field, and `Pending Approval` in the **Status** field.

20. To remove filters applied to the **Request** table, click **Clear Filter**.

21. Click the ⚙ button.

    A pane displays the **Reset** tab and **Download** tab. You can view options to hide or show column names according to your requirement.
    For example, you can choose to hide columns that contain details, such as owner, consumer, and external ticket.

22. To go back to the previous table settings, click **Reset**.

23. To download the table including hidden columns in .csv file, click **Download**.

24. To adjust the width of the column headers, drag cursor over the edges of the column header.

25. Hover the mouse over the column header and click up or down arrows.

    The column displays the details in the alphabetical order or reverse order.

26. Click a data collection to view its details. To understand the properties of the data collection, see "Search, View, and Enrich Data Collections" on page 19

Edit Data Collections

You can modify the properties of a data collection that are used by data consumers to search in the Data Marketplace.

You must have one of the following user profiles to perform this task:

- Data owner of the data collection
- Technical owner of the data collection
- Data Marketplace Administrator
- Default technical owner of the Data Marketplace

1. Launch Data Marketplace and go to the **Data I Own** tab.
2. The **Data I Own** page displays the data collections that you have published from Axon Data Governance.
3. Click the **View in Axon** tab to view the data collection in the Axon.

   The data collection opens in the new tab.
4. Click a data collection name to view its details. To understand the properties of the data collection, see "Search, View, and Enrich Data Collections" on page 19.
5. To modify the properties of the data collection, click **Edit**.
6. Modify the following properties of the data collection:

Field	Description
Name	Name of the data collection.
Ref. No.	Prefix of the reference identifier for the data collection.
Purpose	Purpose of the data collection.
Status	Status of the data collection. Data consumers can search and find data collections in the `Published` status. If you change the status of the data collection to `Unpublished`, the data collection is hidden for data consumers. **Note:** If a data consumers has requested access to a data collection, and you change the status of the collection to `Unpublished`, the data owners and the technical owner can still fulfil the order.
Data Owners	Users who can approve or reject access requests for the data collection.
Technical Owners	Optional. The user that is responsible for delivering the data to the data consumers.
Category	Category for the data collection.
Custom Fields	Appears if a SuperAdmin, default technical owner, or Data Marketplace Administrator has configured custom fields for data collections. Depending on the configuration, the custom fields can be mandatory or optional. **Note:** If the admin has configured custom fields, they appear only for new data collections, not for existing data collections.

7. Click **Save**.
8. Go to the **Data Sets** section to modify the data sets that are part of the data collection.

   The page displays data sets and attributes associated with the data collection.

9. In the **Data Sets** table, click **Add** to add data sets to the data collections.

   The **Add Data Set** dialog box appears.

10. Select the required data set from the dropdown list. You can also search for data sets that match your requirement.
11. Click **View in Axon** to view the data set in Axon Data Governance.

    The data set opens in a new tab.

12. Click **Save**.

    The data set is added to the data collection. The attributes and data quality values related to the data set are added to the **Data Sets** table.

13. To remove the data set from the data collection, click  .

    The **Remove Data Set** dialog box appears.

14. Click **Remove**.

    The data set is removed from the data collection. The attributes and data quality values related to data set are removed from the **Data Sets** table.

15. To hide or show columns according to your requirement, click  icon.

    A pane displays the **Reset** and **Download** option.
    For example, you can choose to hide columns that contain details such as **Axon status**, **Lifecycle**, and **Glossary Name** and show columns that contain details such as ID, Ref., and Type.

16. In the **Attributes** table, click **Filters** and select fields from the dropdown list.

    You can remove the selected fields according to your search criteria. You can select all the fields from the dropdown list.

17. Click **Clear Filter** to remove the filters applied to the **Attributes** table.
18. To attach usage guides and policies to the data collection, go to the**Policies**.
19. Click **Add** to attach usage guidelines in the **Usage Guide** sub-section.

    The **Add Usage Guide** dialog box appears.

20. Select a usage guide from the dropdown list.

    Review the details of the selected usage guide.

21. To add another usage guide, click **Add Another**.

    Another usage guide is added to the data collection.

22. Click **Save**.
23. In the **Policies** sub-section, click **Add** to attach the relevant policy.

    The **Add Policy** dialog box appears.

24. Select the relevant policy from the dropdown list.

    Review the details of the selected policy.

    Note: When you enter keywords to search the policies, the dropdown list displays a maximum of 30 policies.

25. To add more than one policy, click **Add Another**.

    Another policy is added to the data collection.

26. Click **Save**.

    The page displays confirmation usage guides on the top followed by the information usage guides.

27. To remove usage guide or policies from the data collection, click .

    You cannot remove an inherited policy from a data collection.

    Note: If a data collection does not contain a usage guide, data consumers cannot request access to the data collection.

Axon saves your changes to the data collection.

CHAPTER 5

Deliver Data to Consumers

This chapter includes the following topics:

- Deliver Data Overview, 47
- View Access Requests to Data Collections, 47
- Approve or Reject a Data Access Request, 48
- Fulfill a Data Access Request, 49
- Withdraw Access to a Data Collection, 50

Deliver Data Overview

When a data consumer finds a data collection and requests access to it, the data owner can read the business justification and decide to approve or reject a request. If the data owner or Data Marketplace administrator approves the request, the technical owner delivers the data assets to the data consumer.

View Access Requests to Data Collections

You can view the list of all collections that are waiting for your approval or delivery.

You must have one of the following user profiles to perform this task:

- Data Marketplace Administrator
- Data owner of the data collection
- Technical owner of the data collection
- Default Technical Owner of the Data Marketplace

1. Launch Data Marketplace and go to the **Tasks** tab.
2. If you are a data owner, go to the **Approve** sub-tab to see the data collections that are waiting for your approval.
3. Click ••• button and select one of the following options:
   - **Approve**. Approve the access to the data collection.
   - **Reject**. Reject the access to the data collection.

   For more information, see "Approve or Reject a Data Access Request" on page 48

4. If you are a technical owner, go to the **Fulfill** sub-tab to see the data collections that are waiting for your delivery. For more information, see "Fulfill a Data Access Request" on page 49.
5. If you are the Data Marketplace administrator or data owner, go to the **Requests** sub-tab to see the data collections that are waiting for your approval.

Approve or Reject a Data Access Request

When a data consumer requests access to a data collection, you can approve or reject the request.

To approve the request, you must have one of the following user profiles:

- Data owner of the data collection
- Data Marketplace administrator
- Technical owner of the data collection

To reject the request, you must have one of the following user profiles:

- Data owner of the data collection
- Data Marketplace administrator
- Default technical owner of the Data Marketplace

1. Launch Data Marketplace and go to the **Tasks** tab.
2. Click the **Approve** sub-tab to see the data collections that are waiting for your approval.
3. In the list of access requests, click **Approve** to approve the access request, or click **Reject** to reject the access request.

   A dialog box appears, where you can enter details to approve or reject the request.
4. Enter the following details to approve or reject the request:

Field	Description
Add Comment	Enter a comment about the data delivery.
External Ticket	Optional. Specify the ticket number to an external ticketing system that you can use to track the data delivery.

5. Click the **Approve** or **Reject** button to complete the task.
6. In the list of access requests, you can click on an order to view the access request order.

   The page displays the timeline, summary, and delivery details of the order.
7. In the **Timeline** section of the order details page, you can see the history of interactions for the access request. Click **Add Comment** to add a comment to the access request.
8. If you are a Data Marketplace Admin or data owner, mention data users by their names and request them to provide inputs on an order when the order is in pending status. To tag a data user, type `@` and enter a user name or select a user name from the popup list.

   For each stage of the order, you can request for a comment from a user. You cannot request for a comment from a user if the user has pending requests for the order.
9. Click **Comment** or **Agree or Disagree**.

An information panel appears to indicate the request for a comment or an agreement from the data user.

10. Click **Save**.

    A notification is sent to all participants of the review request. A data user can add comments or vote to register their response. If you are a participant in the review request, you can view request for inputs in the **Order Inputs** sub-tab of the **Tasks** tab. The page displays the list of orders and associated request for inputs. If you are a data consumer and you are participant of the review request, click ••• to select **Agree** or **Disagree** button.

11. In the **Timeline** section of the order details page, click **Approve** to approve the access request, or click **Reject** to reject the access request.

The data access request is complete.

Fulfill a Data Access Request

After the data owner approves access to a data collection, you can deliver the data to the data consumer.

You must have one of the following user profiles to perform this task:

- Technical owner of the data collection
- Default technical owner of the Data Marketplace

1. Deliver the data to the data consumer.
   Do this step outside the Axon Data Governance environment. For example, you can provide access to a database or send a data file by email.
2. After you deliver the data, launch Data Marketplace and go to the **Tasks** tab.
3. Go to the **Fulfill** sub-tab to see the data collections that are waiting for your delivery.
4. In the list of fulfillment requests, click on an order to view the access request order.

   The page displays the timeline, summary, and delivery details of the order.
5. In the **Timeline** section of the order details page, view the history of interactions for the access request.
6. To add a comment to the access request, click **Add Comment**. Enter your comment, and click **Save**.
7. If you are a Data Marketplace Admin or data owner, mention data users by their names and request them to provide inputs on a data access request when the data access request is in pending status. To tag a data user, type `@` and enter a user name or select a user name from the popup list.

   For each stage of the data access request, you can request for a comment from a user. You cannot request for a comment from a user if the user has pending requests for the data access request.
8. Click **Comment** or **Agree or Disagree**.

   An information panel appears to indicate the request for a comment or an agreement from the data user. A data user can add comments or vote depending on the requested action.
9. To enter the details of the request fulfillment, click **Fulfill**. If you want to reject the access request, click **Reject**.

10. Enter the following details of the order fulfillment:

Field	Description
Delivery Target	Select the delivery target that you used to deliver the data.
Add Comment	Enter a comment about the data delivery.
External Ticket	Optional. Specify the ticket number to an external ticketing system that you can use to track the data delivery.

11. To mark the data access request as fulfilled, click **Fulfil**. To reject the fulfillment request, click **Reject**.

You have fulfilled the data access request.

Withdraw Access to a Data Collection

You can withdraw access to a data collection if you determine that the data consumer no longer requires access to the data. If you are the data owner of a data collection or the Data Marketplace administrator, you can request for a data collection to be withdrawn. The technical owner of the data collection or the default technical owner of the Data Marketplace can then withdraw the access for a data consumer to the data collection.

You must have one of the following user profiles to perform this task:

- Data owner of the data collection
- Data Marketplace Administrator
- Default Technical Owner of the Data Marketplace

1. Launch Data Marketplace and go to the **History** tab.
2. Go to the **Access** sub-tab to view the data collections for which consumers have requested access.
3. Click an access identifier.

   If you are the data owner, click **Request Withdrawal**.
   If the data owner is also the technical owner for the data collection or the default technical owner for the Data Marketplace, click **Withdraw Access**. The **Request Withdrawal** dialog box appears.
4. Click **Add Comment**. You can perform the following tasks:
   - If you want to add a comment, enter the comment and click **Save**.
   - If you want to add a participant to request their review comments, type `@` and enter a user name or select a user name from the popup list that appears in the **Add Comments** field. Click **Save**.
     A participant can add comments to the consumer access.
5. In the **Comments** field, enter a comment about the request withdrawal.
6. Click **Request Withdrawal**.
7. If the access details of a data collections are in **Pending Withdrawal** status, click the icon.

   If you are the data owner, click **Cancel Withdrawal**.
   If you are a technical owner for the data collection, click **Withdraw Access** or **Cancel Withdrawal**.
8. To cancel the access withdrawal request, click **Cancel Withdrawal** .

   The **Cancel Withdrawal** dialog box appears.

9. In the **Comments** field, enter a comment about the cancellation of access withdrawal request.
10. Click **Cancel Withdrawal**.

    If you are the technical owner for the data collection or the default technical owner for the data Marketplace, you can also view the **Cancel Withdrawal** option in the **Withdraw** sub-task of the **Tasks** section.

    The **Timeline** section is updated with the message that access revocation is cancelled. The data owner can click the **Request Withdraw** option again.

The technical owner of the data collection or the default technical owner of the Data Marketplace can now withdraw the access to the data collection for the data consumer.

After the access withdraw request is placed, the technical owner of the data collection or the default technical owner of the Data Marketplace must perform the following steps:

1. Launch Data Marketplace and go to the **History** tab.
2. Go to the **Access** sub-tab to view the data collections for which consumers have access.
3. Hover the mouse over  and click **Withdraw Access**.
   The **Withdraw Access** dialog box appears.
4. In the **Comments** field, enter a comment about the access revocation.
5. Click **Withdraw Access**.
   The access revocation is complete, and the **Delivery** section of the **Access** page of the data collection is updated with the access revocation message.

Note: You can also view the **Withdraw Access** option in the **Withdraw** sub-tab of the **Tasks** section.
