Abstract

View a scorecard lineage diagram for a scorecard metric or metric group in Informatica Analyst. Use scorecard lineage to analyze the root cause of unacceptable score variance for a metric or metric group and understand the data flow. To view the scorecard lineage diagram, export scorecards to an XML file from Informatica Developer. Use the exported XML file to create and load a resource file in Metadata Manager.

Supported Versions

- Data Explorer 9.5.1
- Data Quality 9.5.1
- Data Services 9.5.1

Scorecard Lineage Overview

Scorecard lineage shows the origin of the data, describes the path, and shows how the data flows for a metric or metric group. You can use scorecard lineage to analyze the root cause of an unacceptable score variance in metrics or metric groups. View the scorecard lineage in the Analyst tool.

Scorecard Lineage Process

Complete the following tasks to view scorecard lineage:

1. In Informatica Administrator, associate a Metadata Manager Service with the Analyst Service.
2. Select a project and export the scorecard objects in it to an XML file. To do the export, you can use the **Export Resource File for Metadata Manager** option in the Developer tool or `infacmd oie exportResources` command.
3. In Metadata Manager, use the exported XML file to create a resource and load it.

   Note: The name of the resource file that you create and load in Metadata Manager must use the following naming convention: <MRS name>_<project name>. For more information about how to create and load a resource file, see *Informatica PowerCenter Metadata Manager User Guide*.
4. In the Analyst tool, open the scorecard and select a metric or metric group.
5. View the scorecard lineage.

Exporting a Resource File from the Developer Tool

You can export a project containing scorecards and dependent objects as a resource file for Metadata Manager. Use the exported resource file in the XML format to create and load a resource for scorecard lineage in Metadata Manager.

1. To open the **Export** wizard, click **File** > **Export**.

2. Select **Informatica** > **Resource File for Metadata Manager**.

3. Click **Next**.
4. Click **Browse** to select a project that contains the scorecard objects and lineage that you need to export.
5. Click **Next**.
6. Select the scorecard objects that you want to export.
7. Enter the export file name and file location.
8. To view the dependent objects that the **Export** wizard exports with the objects that you selected, click **Next**.

   The **Export** wizard displays the dependent objects.
9. Click **Finish**.

   The Developer tool exports the objects to the XML file.

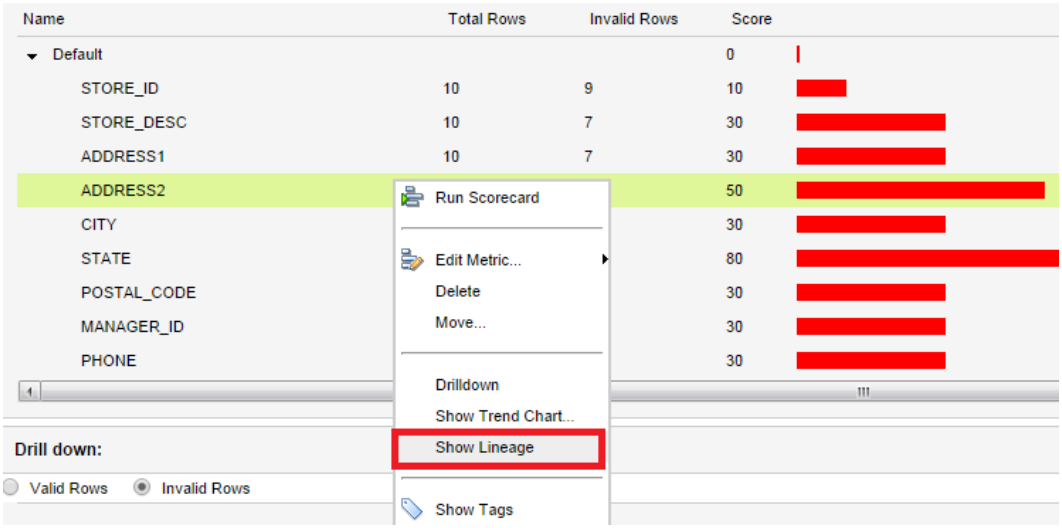

Viewing Scorecard Lineage in Informatica Analyst

You can view a scorecard lineage diagram for a metric or metric group. Before you can view scorecard lineage diagram in the Analyst tool, you must load the scorecard lineage and metadata in Metadata Manager.

1. In the Navigator, select the project or folder that contains the scorecard.
2. Click the scorecard to open it.

   The scorecard appears in a tab.
3. In the **Scorecard** view, select a metric or metric group.

4. Right-click and select **Show Lineage**.

The scorecard lineage diagram appears in a new window.

Important: If you do not create and load a resource in Metadata Manager with an exported XML file of the scorecard objects, the Analyst tool displays an error message that the resource is not available in the catalog.
