Abstract

This article describes how a Glossary administrator or data steward can replicate a glossary in an Informatica domain.

Supported Versions

- Informatica Power Center Advanced Edition 9.6.0
- Informatica Data Quality 9.6.0
- Informatica Enterprise Data Catalog 10.2.2

Importing a Glossary. 3

Overview

Use the Analyst tool to export a glossary that you want to replicate. The Analyst tool exports glossaries to an .xlsx file. Edit the .xlsx file before you import the file.

Every glossary in the Analyst tool has a unique identification number. If you want to replicate a glossary in the Informatica domain, you must ensure that the two glossaries have unique identification numbers and unique names. Delete the identification number from all **ID** columns in the .xlsx file before you import the glossary within the same domain. After you import the glossary without identification numbers, the Analyst tool generates unique identification numbers.

Perform the following tasks to replicate a glossary in a domain:

1. Export the glossary that you want to replicate to an .xlsx file.
2. Edit the .xlsx file to rename the glossary and delete the instances of associated identification numbers and glossary identification numbers.
3. Import the .xlsx file.

Exporting a Glossary

Use the Analyst tool to export the glossary that you want to replicate. You can export data to an .xlsx file.

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Glossaries**.
3. Right-click on any glossary and click **Export**.

   The **Export** dialog box appears.
4. Choose the glossary that you want to export in the **Export** dialog box.
5. Click **Export**.

Modifying the Export File

Edit the .xlsx file before you use the Analyst tool to import the file.

1. Open an editable version of the .xlsx file in Microsoft Excel or another application that can edit .xlsx files.
2. In the **Glossaries** worksheet, delete all the values in the **Glossary Id** column.
3. In the **Glossary Name** column specify a new value. In the **Glossary** column of all the other worksheets specify the same value.
4. In the **Categories** worksheet delete all the values in the **Category Id** column.
5. In the **Policies** worksheet delete all the values in the **Policy Id** and **Associated Category Ids** columns.
6. In the **Terms** worksheet delete all the values in the **Term Id**, **Related Term Ids**, and **Associated Category Ids** columns.
7. In the **Rules** worksheet delete all the values in the **Term Id** and **Associated Policy Ids** columns.
8. In the **Synonyms** worksheet delete all the values in the **Term Id** column.
9. Save the .xlsx file.

Importing a Glossary

Import the .xlsx file that you edited to replicate the glossary within the domain.

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Glossaries**.
3. Right-click on a glossary and click **Import**.

   The **Import** wizard appears.
4. Click **Browse** to select the .xlsx file.
5. Click **Next** to import the .xlsx file.

   The Analyst tool displays a summary of data in the .xlsx file.
6. Optionally, resolve any conflict by selecting one of the options that the Analyst tool provides in the **Summary** screen.
7. Click **Save**.
