Publishing or Rejecting a Business Initiative. 6

Overview

To edit business terms in bulk, export the glossary that contains the terms to an .xlsx file. You can use Microsoft Excel to edit the contents of the file.

When you modify a business term that is in the published or rejected phase, the Analyst tool creates a revision of the term. Data stewards must propose the revised term for review before they can publish or reject the term. You can add business terms to a business initiative to approve or reject all the terms that are part of the initiative. You can add only those terms that are in the Draft phase or the In Review phase to the business initiative.

When you create a business initiative to approve or reject the business terms, that the Analyst tool captures the reason for the change in the audit history. Glossary consumers can see the business initiative that the terms were part of.

To edit multiple business terms that are in the published or rejected phase, perform the following steps:

1. Export the glossary containing the business terms that you want to modify to an .xlsx file.
2. Edit the .xlsx file to modify the business terms. Change the phase of the modified business terms to Draft.
3. Import the .xlsx file to the Analyst tool.
4. Create a business initiative, and add the modified terms to the initiative.
5. Propose the business initiative for a review by the stakeholder. Publish or reject the business initiative after the approval cycle. The phases of all the assets change to approved or rejected.

Exporting a Glossary

Export the glossary that contains the business terms that you want to edit. You can download the glossary as an .xlsx file after you export.

1. Open the **Library** workspace.
2. In the Library Navigator, click **Glossaries**.
3. Right-click a glossary and click **Export**.

   The **Export** dialog box appears.
4. In the **Glossary Assets** section, click the check-box against the glossary that you want to export.
5. Click **Export**.

Export File Reference

The Terms worksheet in the exported .xlsx file provides details about the business terms in the glossary.

Use the Terms worksheet to edit multiple business terms. To edit other types of assets, see the *Business Glossary Export File Description* H2L.

You must change the phase of the modified business terms to Draft in the **Phase** column. This ensures that the modified terms can go through the approval lifecycle after you report the .xlsx file.

The following table describes the columns in the Terms worksheet and provides recommendations about updating the column values:

Column Name	Column Description	Data Type	Update Recommendation
Glossary	The name of the glossary in which the business term exists.	String	You can update the names of the glossary in which the business terms exist.
Term Name	A name for the business term. Rows in the **Term Name** column cannot be empty.	String	You can update the names of the business terms.
Term Id	A unique ID for the business term.	Numeric String	Do not update.
Revision	For internal use only.	String	Do not update.
Description	The description of the business term.	String	You can update the descriptions of the business terms.
Owner	The user who is the owner of the business term.	String in the UserID/ [namespace]/ [User or Group] format.	You can update the owner name. Ensure that the user account exists in the Informatica domain.
Steward	The user who is the steward of the business term.	String in the UserID/ [namespace]/ [User or Group] format.	You can update the steward name. Ensure that the user account exists in the Informatica domain.
Reference Table Url	Links to the reference table that contains the valid values for the business term.	String	You can update the data in the reference table URL column.

Column Name	Column Description	Data Type	Update Recommendation
Source	Specifies the origin of the information contained within the business term. The rows in the source column can have one of the following values: - INTERNAL - EXTERNAL	Limited String	You can update the values in the source column.
Phase	The current phase of the business term. The rows in the **Phase** column can have one of the following values: - DRAFT - IN_REVIEW - REJECTED - PUBLISHED - PENDING PUBLISH	Limited String	You can update the phase.
Status	The current status of the business term. The rows in the **Status** column can have one of the following values: - ACTIVE - INACTIVE	Limited String	You can update the status.
Usage Context	Information that describes the context of the business term usage.	String	You can update the usage context.
Example	An example that describes the usage of the business term.	String	You can update the description.
StakeHolders	One or more users who participate in the approval process before the data steward publishes the business term. If the term has multiple stakeholders, the rows in the **StakeHolders** column have values in the following format: <Stakeholder1>, <Stakeholder2>, <Stakeholder3>	String in the UserID/ [namespace]/ [User or Group] format.	You can update the stakeholder names. Ensure that the user accounts exist in the Informatica domain.
Related Term Ids	Unique ID of the related business term. If the term is related to multiple terms, the rows in the **Related Term Ids** column have values in the following format: <RelatedTermID1>, <RelatedTermID2>, <RelatedTermID3>	Numeric String	You can update the related term IDs. Ensure that the updated ID exists in the glossary. Update the related term name.
Related Term Names	Unique name of the related business term. If the term is related to multiple terms, the rows in the **Related Term Names** column have values in the following format: <RelatedTermName1>, <RelatedTermName2>, <RelatedTermName3>	String	You can update the related term names. Ensure that the updated name exists in the glossary. Update the related term name.

Column Name	Column Description	Data Type	Update Recommendation
Relationship Type Name	One of the default relationships. The sequence of relationship type corresponds to the related term names and related term IDs. The rows in the **Relationship Type Name** column can have one of the following values: - Parent - Children - Contains - Calculated from - Custom Relationship	String	You can update the type of relationship that the business term has with related business terms.
Associated Category Ids	The unique ID of the category with which the term is associated.	Numeric String	You can update the associated category IDs. Ensure that the updated ID exists in the glossary. Update the associated category name.
Associated Category Names	The unique name of the category with which the term is associated.	String	You can update the associated category names. Ensure that the updated category name exists. Update the associated category ID.

Importing a Glossary

After you edit the business term properties in the .xlsx file, import the file to the Analyst tool. The Analyst tool creates a revision of the modified business terms. The phase of the revised terms is Draft. The data steward must publish the revised terms for the Glossary consumers to see the changes. Until then, Glossary consumers see the current published version.

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Glossaries**.
3. Right-click a glossary, and click **Import**.

   The **Import** wizard appears.
4. Click **Browse** to navigate to the location on your computer that contains the .xlsx file, and select it.
5. Click **Next** to import the .xlsx file.

   The Analyst tool displays a summary of data in the .xlsx file.
6. Click **Replace Asset** in the **Summary** screen to update the modified business terms.
7. Click **Save**.

Creating a Business Initiative

After you import the glossary, create a business initiative to manage the business terms that you edited. You cannot add business terms that are in the published or rejected phase.

1. From the **New** menu, select **Business Initiative**.

   A business initiative opens in the **Glossary** workspace in edit mode.
2. Configure the business initiative properties.

3. In the **Assets Collection** section, from the **Actions** menu, click **Add**.
4. In the **Assets** dialog box, select the business terms that you want to add to the business initiative.
5. Choose to save the business initiative.
   - To save the current configuration and continue the task immediately, click **Save and Continue**. The Analyst tool creates a draft business initiative and displays the initiative in the edit mode.
   - To complete the task, choose **Save and Finish**. The Analyst tool creates a draft business initiative and displays the initiative in the read-only mode.

Proposing a Business Initiative for Review

Propose the business initiative for review for the stakeholder to provide feedback. When you propose a business initiative for review, the phase of every business term that is part of the initiative changes to In Review. The stakeholder reviews the changes to the business terms and provides feedback.

The business initiative must be in the Draft phase before you can propose the asset for review.

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Assets**.
3. Select the business initiative that you want to propose for review.

   The Analyst tool displays the business initiative in the **Glossary** workspace.
4. From the **Actions** menu, click **Propose for review**.

   The phase changes to In Review.

Publishing or Rejecting a Business Initiative

Publish or reject the business initiative after a review by the stakeholder. The Analyst tool publishes or rejects all the business terms when you publish or reject the business initiative. When you reject a business initiative, you can choose to change the phases of all the assets that are part of the initiative to Rejected. You can choose to retain the phases of the assets. When you chose to retain the phases of the assets, the Analyst tool changes the phase of the business initiative to Rejected but retains the phases of the assets that are part of the initiative.

The Glossary asset must be in the In Review phase before you can publish or reject the business initiative.

1. Click **Open** to open the **Library** workspace.
2. In the Library Navigator, click **Assets**.
3. Click the business initiative that you want to publish or reject.

   The Analyst tool displays the business initiative in the Glossary workspace.
4. Choose to publish or reject the business initiative.
   - To publish the initiative, from the **Actions** menu, click **Publish**. The phase changes to Published.
   - To reject the initiative, from the **Actions** menu, click **Reject**. The phase changes to Rejected.
