Preface

Follow the instructions in *MDM Extension for Agentforce* to deploy MDM Extension for Agentforce.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing MDM Extension for Agentforce

An MDM SaaS extension is a ready-to-use package that streamlines and accelerates the implementation of MDM SaaS. MDM SaaS extensions contain pre-configured assets and integrations that extend and enhance the MDM SaaS business applications. Use an extension to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Use MDM Extension for Agentforce to seamlessly integrate MDM SaaS with Salesforce Agentforce, an AI agent platform, to enable AI agents to access accurate, complete, and real-time master data. Leverage MDM Extension for Agentforce to enable AI agents to perform real-time, on-demand searches and to identify and retrieve master records and relationships from MDM SaaS. With these capabilities, Agentforce AI agents, such as Service, Personal Shopper, and Sales Development Representative agents can deliver intelligent, personalized, and efficient customer interactions across industries.

The extension includes custom labels and access to an unmanaged Salesforce package. The unmanaged Salesforce package includes pre-built Agent actions, named credential, and permission set.

The extension uses MDM Data Tools for AI Agents, an Application Integration recipe, to seamlessly connect AI agents to master records in Customer 360 SaaS and Product 360 SaaS.

Use MDM Extension for Agentforce to achieve the following goals:

Enable personalized gift recommendations

Access detailed customer profiles, demographics, and household relationships to help Personal Shopper AI agents deliver tailored gift suggestions that boost customer loyalty and sales.

Build proactive upsell strategies

Provide AI agents with life event data and financial profiles to automate identification of upsell opportunities and streamline customer outreach.

Automate lead qualification

Allow Sales Development Representative (SDR) AI agents to verify customer data, identify existing records, and prevent duplicate leads, thereby improving lead qualification and sales funnel efficiency.

Streamline service appointment scheduling

Enable Service AI agents to retrieve complete customer information for automating complex service scheduling and ensuring seamless service delivery across various offerings.

Prerequisites

Before you deploy MDM Extension for Agentforce, perform the following prerequisites:

- Ensure that you have the license for the integration components for Business 360, Customer 360 SaaS Edition, Product 360 SaaS Edition, and the Salesforce connector.
- Ensure that you have access to MDM Data Tools for AI Agents, a Cloud Application Integration recipe.

  Note: For more information about MDM Data Tools for AI Agents, see *MDM Data Tools for AI Agents* in the *Recipe* documentation.
- Ensure that your Salesforce organization uses its Enterprise or Developer Edition.
- Ensure that your Salesforce organization has both Einstein Generative AI and Agentforce AI Agent features enabled.
- Ensure that you have administrator rights to install an unmanaged Salesforce package.

Note: The use of the extension doesn't confer any additional license or entitlement to license consumption beyond the terms specified in the applicable licensing agreements.

CHAPTER 2

MDM SaaS and Agentforce integration

Agentforce is a Salesforce AI agent platform that empowers businesses to create and deploy autonomous AI agents tailored to their operational needs.

The platform include the following components:

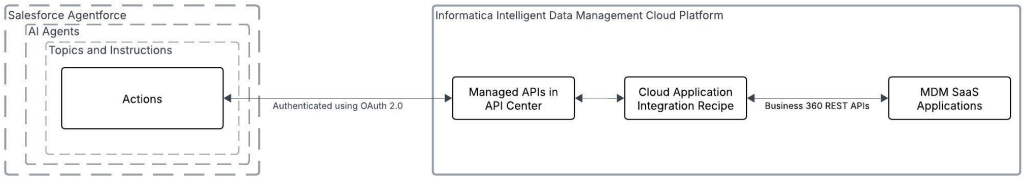

- Agents. Intelligent systems that understand natural language and perform tasks.
- Topics and Instructions. Foundational building blocks that define what an agent can do and its scope.
- Actions. Specific tasks that an Agentforce AI agent performs within a topic.

An AI agent in Agentforce can be configured with multiple topics. Each topic can include multiple actions to define agent behavior. The unmanaged Salesforce package includes Agent actions based on Apex classes that enable AI agents to retrieve comprehensive customer and product information from MDM SaaS.

Data flow between MDM SaaS and Agentforce

Actions use OAuth 2.0 authorization to communicate securely with Intelligent Data Management Cloud (IDMC). API Center manages the Business 360 REST APIs, ensuring secure, token-based connections between actions and the APIs. The processes defined in the MDM Data Tools for AI Agents recipe orchestrate data flows between MDM SaaS business applications and Agentforce AI Agents using the Business 360 REST APIs.

The following diagram shows the data flow between MDM SaaS and AI agents in Salesforce Agentforce:

Pre-built actions

The unmanaged Salesforce package includes pre-built actions that enable Agentforce AI agents to perform real-time, on-demand searches. These actions retrieve comprehensive and enriched customer and product profiles, household, and organizational relationship data from Customer 360 SaaS and Product 360 SaaS.

The package includes the following pre-built actions:

Identify Customer Records from Informatica Customer 360

Searches for records in Customer 360 SaaS using one or more input parameters, such as name, phone number, email address, unique identifier, or physical address. The response includes a list of matching customers.

Get Customer Profile from Informatica Customer 360

Retrieves additional details about a selected customer based on the business ID and business entity parameters. The response includes a detailed information of the customer record, such as name, company type, phone number, email address, date of incorporation, and other relevant details.

Get Customer Relationships from Informatica Customer 360

Retrieves household and organizational relationship data of a customer based on the business ID. The response contains a structured output with relationship types and related entity summaries.

Search Product Records from Informatica Product 360

Searches for records in Product 360 SaaS using one or more of the input parameters, such as product identifier, GTIN, description, or brand. The response includes a list of matching products.

Get Product Details from Informatica Product 360

Retrieves additional details about a selected product based on the business ID. The response includes detailed information of the product record, such as identifier, brand, sub brand, manufacturer, and other relevant details.

Get Product Relationships from Informatica Product 360

Retrieves a list of related products based on the business ID. The response contains a structured output of the relationship data of a product, such as relationship types, business IDs of related products, and other relevant details.

CHAPTER 3

Deploying MDM Extension for Agentforce

To deploy MDM Extension for Agentforce, perform the following tasks:

1. Configure the MDM Data Tools for AI Agents recipe.
2. Install the unmanaged Salesforce package.
3. Configure the named credential.
4. Assign the permission set to users.
5. Deploy custom labels in Salesforce.
6. Add actions to a topic in an AI agent.

Configuring the MDM Data Tools for AI Agents recipe

Before you install the unmanaged Salesforce package, configure the MDM Data Tools for AI Agents recipe.

1. In Application Integration, click **Recipe**.
2. In the **Find** box, search for `MDM Data Tools for AI Agents`.
3. Configure the recipe. For more information about MDM Data Tools for AI Agents, see *MDM Data Tools for AI Agents* in the *Recipes* documentation.

   Note: When you configure the recipe, ensure that you copy and save the following credentials:

   - OAuth 2.0 client ID and client secret
   - API Endpoint URL

   You need these details to configure the named credential in Salesforce.

Installing the unmanaged Salesforce package

After you configure the MDM Data Tools for AI Agents recipe in Cloud Application Integration, install the unmanaged Salesforce package in your Salesforce environment.

1. To access Informatica MDM Extension for Agentforce, an unmanaged Salesforce package, use the following URLs:
   - Production environment.
     `https://login.salesforce.com/packaging/installPackage.apexp?p0=04tfn000001YeP3`
   - Sandbox environment.
     `https://test.salesforce.com/packaging/installPackage.apexp?p0=04tfn000001YeP3`

   The Salesforce login page appears.
2. Enter your user credentials, and click **Log In**.

   The **Install Informatica MDM Extension for Agentforce** page appears.
3. Enter `INFAMDMAGENTACTIONSOCT25V1` as the installation key, and select one of the following options:
   - Install for Admins Only. Only administrator users in the environment have access to the package assets.
   - Install for All Users. All users in Salesforce have access to the package assets.
   - Install for Specific Profiles. Select specific user profiles and grant users with those profiles access to the package assets.
4. Click **Install**.
5. To see detailed components of the package, click **View Components**.
6. After the installation is complete, click **Done**.

   If the installation takes a long time, a message appears stating that you will receive an email when the installation is complete.

   The **Installed Packages** page lists Informatica MDM Extension for Agentforce.

Configuring the named credential

To configure the named credential, you must configure an external credential principal to map the named credential to.

1. From **Setup**, enter `Named Credentials` in the Quick Find box.
2. Click **Named Credentials**.
3. On the **Named Credentials** page, click **InfaMdmOAuthNC**.

   The **InfaMdmOAuthNC** setup page appears with the following prepopulated details:

Field Name	Value
Label	InfaMdmOAuthNC
Name	InfaMdmOAuthNC

Field Name	Value
URL	https://usw1-gw.dmp-us.informaticacloud.com/lQafWzN0y85h5kt4yKm30m.com/InfaMdmActions/v1
External Credential	InfaMdmOAuth2ClientCred

4. To update the URL, click **Edit**.
5. Locate the **API Endpoint URL** you saved when configuring the MDM Data Tools for AI Agent recipe, copy the URL up to "`/v1`", and enter it in the **URL** field.
6. Save the changes.
7. In the **External Credential** field, click **InfaMdmOAuth2ClientCred**.

   The **InfaMdmOAuth2ClientCred** setup page appears.
8. In the **Principals** section, click the **Actions** menu for the **idmccred** parameter and then click **Edit**.
9. Enter the **Client ID** and **Client Secret** details that you saved when configuring the MDM Data Tools for AI Agent recipe.
10. Click **Save**.

Assigning the permission set to users

In Salesforce, a permission set specify what the users can do within an organization. The unmanaged Salesforce package includes a predefined permission set granting access to Agent actions. Assign the permission set to required users.

1. From **Setup**, enter `Permission Sets` in the Quick Find box.
2. Click **Permission Sets**.
3. On the **Permission Sets** page, click **Infa MDM Agent permissions**.

   The permission set details appear.
4. Click **Manage Assignments** > **Add Assignments**.
5. Select the users for whom you want to assign the permission set, and click **Next**.

   Note: If your agent is a Service Agent, assign the permission set to Agent Users assigned to the Service Agent.
6. Click **Assign**.

Deploying custom labels in Salesforce

You must deploy custom labels in Salesforce for the pre-built actions to work seamlessly.

Before you begin the deployment, download the `Custom labels Informatica MDM Extension for Agentforce.zip` file to your computer using the following URL:
Custom labels Informatica MDM Extension for Agentforce

To deploy the custom labels in Salesforce, perform the following tasks:

1. Open your browser and go to `https://workbench.developerforce.com`.
2. Select the Salesforce environment where the managed package is installed.
3. Agree to the terms of service, and click **Login with Salesforce**.

   If you are already logged in to Salesforce, proceed to step 5.
4. Enter your user credentials, and click **Log In**.
5. If prompted, click **Allow** to let Workbench access the Salesforce environment.

   The **Workbench** home page appears.
6. On the **migration** tab, click **Deploy**.
7. Click **Choose File**.
8. Navigate to the following file on your computer:

   `Custom labels Informatica MDM Extension for Agentforce.zip`
9. Click **Open**.
10. Select **Single Package** and click **Next**.

    The summary of chosen deployment options appears.
11. Review and click **Deploy**.

    The **Metadata API Process Status** page appears. Verify that the deployment status is marked as succeeded.

Adding pre-built actions to a topic in an AI agent

Before you begin, set up an AI agent and assign topics to the AI agent. You can then add actions to the topics.

1. From the **Agentforce Agents Setup** page, launch your agent in **Agentforce Builder**.
2. If your agent is active, deactivate it.
3. On the **Topics** panel, click the topic to which you want to add one or more actions, and then select the **This Topic's Actions** tab.
4. Click **New** > **Add from Asset Library**.
5. In the **Add Available Actions** dialog box, enter `Informatica` in the **Search actions...** field.
6. Select from the following pre-built actions based on the operations your agent must perform when the topic is triggered:
   - Identify Customer Records from Informatica Customer 360
   - Get Customer Profile from Informatica Customer 360
   - Get Customer Relationships from Informatica Customer 360
   - Search Product Records from Informatica Product 360
   - Get Product Details from Informatica Product 360
   - Get Product Relationships from Informatica Product 360
7. Click **Finish**.

   You've have added the pre-built actions to a topic in your AI agent.

8. To enable your AI agent to use the actions, add an instruction in the topic that guides the agent on when to execute the actions.
9. To validate correct behavior and data retrieval, in the **Conversation Preview** panel, initiate a conversation with the AI agent that triggers the newly configured action.
10. To make your agent active, click **Activate**.
