Preface

Follow the instructions in *Define Source Systems* to create source systems.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introduction to source systems

A source system is an asset that acts as a data source for the Business 360 data store. The source system asset helps business users track the source of a record. For example, records from Salesforce and Workday can contribute to master records.

You can use predefined source systems or create custom source systems.

When you ingress or import data, MDM SaaS standardizes the reference data. To standardize the reference data, associate picklists of a business entity with the reference data custom code lists from MDM - Reference 360.

For more information about adding picklists to a business entity, see *Define the Data Model*.

For more information about code lists and crosswalks, see *Introducing Reference 360* in the MDM - Reference 360 help.

The associated code list contains code values, and the crosswalks of the associated code list contain value mappings. When you import data, Business 360 checks whether the code list that you associate with a picklist has a crosswalk with value mappings. The import process standardizes the values of the picklists with the mapped values in the associated code list. If a crosswalk isn't available, the ingress process fails in the transform step.

If the reference data in MDM - Reference 360 contains both Enterprise and custom code lists, MDM SaaS lists only the custom code lists. MDM SaaS doesn't display the Enterprise code lists because standardization of picklist values requires a crosswalk with value mappings between the Enterprise and custom code lists.

You can't delete a code list in MDM - Reference 360 that's associated with a picklist of a business entity. Additionally, you can't delete a crosswalk in MDM - Reference 360 that contains value mappings of custom code lists associated with the source systems.

When you associate a picklist to a code list from MDM - Reference 360 in organizations created after the October 2025 release, MDM SaaS considers the picklist value even if the value isn't available in the associated code list. However, the record is treated as invalid.

In organizations created after the October 2025 release, MDM SaaS loads records with picklist values that aren't available in the associated code list during ingress or file import. However, these records are marked as invalid in business applications.

CHAPTER 2

Predefined source systems

MDM SaaS contains predefined source systems for the business applications to use. You can also create custom source systems for your data sources.

The following table lists the predefined source systems that MDM SaaS contains:

Source system	Description
Default	A default source system for all business applications except Customer 360 SaaS. Business applications use this source system when users create or update records through the user interface.
Informatica Customer 360	A default source system for Customer 360 SaaS. Customer 360 SaaS uses this source system when users create or update records through the user interface.

CHAPTER 3

Create a source system

After you model your master data, define the source systems from which you plan to import or ingress data.

1. Click **New**.

   The **New Asset** dialog box appears.
2. Click **Source Systems**, and then click **Create**.

   The **Source System** dialog box appears.
3. Specify the following source system properties:

Property	Description
Display Name	Name of the source system that you want to appear in the user interface. For example, CRM, Salesforce, and Oracle.
Internal ID	A unique source system identifier, which is generated based on the display name that you enter. For example, if your display name is Sales Force, the internal ID is generated as `sales_force`. You can also enter a different internal ID. An internal ID that you create can contain lowercase letters, numbers, and underscore. **Note:** You can't change the internal ID after you create the source system.
Description	Optional. A brief description of the source system.
Location	Project or folder within which you want to save the source system.

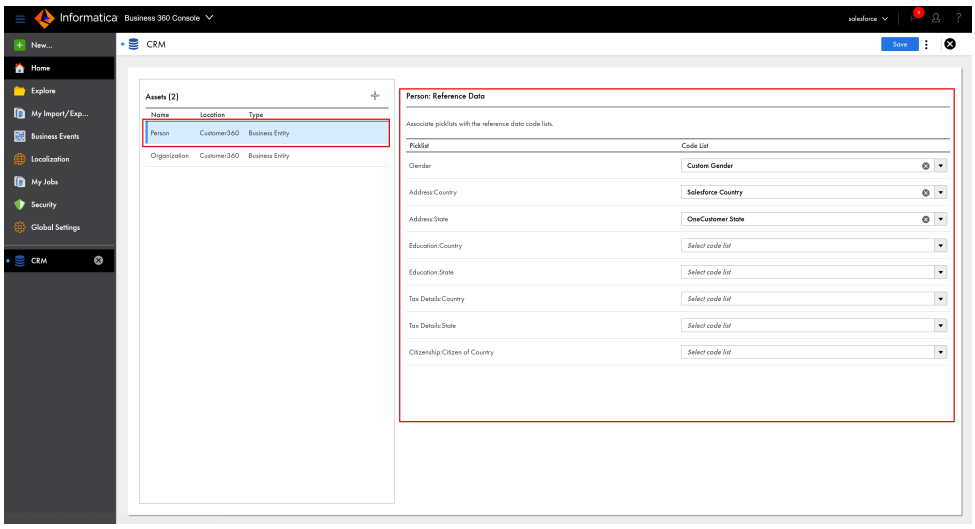

4. Click **OK**.
5. To standardize the reference data when you ingress or import data, perform the following steps:
   a. To select business entities, in the **Assets** section, click **Add Asset**.

      The **Select an Asset** dialog box appears.
   b. Select the required business entities, and click **Select**.
   c. To associate code lists with picklists in a business entity, in the **Assets section**, select a business entity.

      You can view only the picklists whose reference data in MDM - Reference 360 contain custom code lists.
   d. Select the code lists for the picklists in your business entity in the **<Business_Entity>: Reference Data** section.

For example, if you select the Person business entity, the section name is displayed as `Person: Reference Data`.

The following image shows the source system page where you can select a business entity and associate custom code lists with picklists:

You can't associate code lists simultaneously for multiple source systems.

e. To remove a business entity, in the **Assets** section, hover over the business entity that you want to remove, and click **Delete**.

f. Click **Save**.
