Preface

Read *Introduction to MDM SaaS Extensions* to learn about MDM SaaS extensions.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing MDM SaaS extensions

An MDM SaaS extension is a ready-to-use package that streamlines and accelerates the implementation of MDM SaaS. MDM SaaS extensions contain pre-configured assets and integrations that extend and enhance the MDM SaaS business applications. Use an extension to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Use MDM SaaS extensions to address business-specific use cases, such as managing customer consents and preferences, and establishing trusted context for Agentforce agents. You can also leverage extensions to integrate and onboard data seamlessly from sources, such as Salesforce and SAP, into MDM SaaS.

An extension is available as a package for installation on request. The package can include predefined Intelligent Data Management Cloud (IDMC) assets, such as business entities, relationships, pages, search result layout components, reports, reference data, and Data Integration and Application Integration assets. You can customize these assets based on your requirements.

You can use the following MDM SaaS extensions:

Customer 360 Extension for Consent Management

Use Customer 360 Extension for Consent Management to manage customer consents, preferences, processing purposes, and lawful bases collected from multiple channels.

For more information about Customer 360 Extension for Consent Management, see *Customer 360 Extension for Consent Management*.

Customer 360 Extension for Salesforce

Use Customer 360 Extension for Salesforce to integrate Salesforce with Customer 360 SaaS and then process and synchronize Salesforce records in Customer 360 SaaS.

For more information about Customer 360 Extension for Salesforce, see *Customer 360 Extension for Salesforce*.

Customer 360 Extension for SAP

Use Customer 360 Extension for SAP to integrate SAP and Customer 360 SaaS, process SAP ECC and S/4HANA records in Customer 360 SaaS, and export the master records to SAP S/4HANA.

For more information about Customer 360 Extension for SAP, see *Customer 360 Extension for SAP*.

MDM Extension for Agentforce

Use MDM Extension for Agentforce to seamlessly integrate MDM SaaS with Salesforce Agentforce, enabling AI agents to access accurate, complete, and real-time master data from MDM SaaS.

For more information about MDM Extension for Agentforce, see *MDM Extension for Agentforce*.

MDM Extension for Google BigQuery

Use MDM Extension for Google BigQuery to publish master data from MDM SaaS to Google BigQuery. You can leverage the published data for analytics and Generative AI applications across industries, such as retail, financial services, and healthcare.

For more information about MDM Extension for Google BigQuery, see *MDM Extension for Google BigQuery*.

MDM Extension for Microsoft Fabric

Use MDM Extension for Microsoft Fabric to publish trusted master and reference data across customer, supplier, product, and location domains from MDM SaaS to Microsoft Fabric. Leverage the published data for real-time analytics, data science, and machine learning applications across industries such as financial services, healthcare, life sciences, and retail. You can also monitor sustainable sourcing, risks, and ESG data compliance of suppliers.

For more information about MDM Extension for Microsoft Fabric, see *MDM Extension for Microsoft Fabric*.

MDM Extension for Snowflake

Use MDM Extension for Snowflake to publish master data from MDM SaaS to Snowflake. You can leverage the published data to enable integrated analytics across customer, supplier, product, and location domains, as well as to power analytics and generative AI applications on Snowflake Data Cloud. You can also use the published data to improve supply-chain visibility, track sustainable sourcing, evaluate supplier risk, and confirm supplier ESG compliance. The extension benefits industries such as financial services, healthcare, life sciences, and retail.

For more information about MDM Extension for Snowflake, see *MDM Extension for Snowflake*.

Reference 360 Extension for SAP Finance

Use Reference 360 Extension for SAP Finance to integrate Reference 360 and SAP. You can import the SAP financial data into Reference 360, and then create, define, manage, and govern financial data in Reference 360. You can export reference data from Reference 360 to SAP S/4HANA.

For more information about Reference 360 Extension for SAP Finance, see *Reference 360 Extension for SAP Finance*.

Supplier 360 Extension for ESG

Use Supplier 360 Extension for ESG to assess suppliers and assign risk ratings, identify suppliers with high environmental, social, and governance (ESG) risks, and enforce compliance to drive transparency and accountability across the supply chain. You can also manage supplier emissions and greenhouse gas (GHG) inventory data to evaluate emission-related risks based on the Corporate Value Chain (Scope 3) Standard.

For more information about Supplier 360 Extension for ESG, see *Supplier 360 Extension for ESG*.

Supplier 360 Extension for SAP

Use Supplier 360 Extension for SAP to integrate SAP and Supplier 360 SaaS, process SAP ECC and S/4HANA records in Supplier 360 SaaS, and export the master records to SAP S/4HANA. You can also create and process records in Supplier 360 SaaS and export these records to SAP S/4HANA as new business partner records.

For more information about Supplier 360 Extension for SAP, see *Supplier 360 Extension for SAP*.

Guidelines for importing assets

Consider the following guidelines before you import the extension assets:

- Set up the prerequisite MDM SaaS business application.
- Import the extension assets before you customize the business entities. You can safely import multiple extension assets that use different business entities and in different MDM SaaS business applications. When you import the assets in an environment that already has an extension with the same business entities, the import fails.
- After you import the assets, consider them as your custom assets.
- Once you deploy an extension, upgrading to a newer version of the extension isn't supported.

Guidelines for migrating assets

Consider the following guidelines before you migrate the extension assets to another environment:

- To migrate the extension assets to higher environments, such as QA and production, export the assets from the development environment. Then, import them into the QA and production environments. For more information about migrating assets, see *Migrating projects and assets*.
- Don't import the extension assets again into a higher environment.
