Preface

Follow the instructions in *Product 360 for Life Sciences* to deploy Product 360 for Life Sciences.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing Product 360 for Life Sciences

An industry 360 application is a ready-to-use package that you can use as a template for implementing MDM SaaS. With an industry 360 application, you can customize solutions to meet specific requirements and business initiatives of your industry. Use an industry 360 application to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Use Product 360 for Life Sciences to master the medicinal product, packaged medicinal product, and pharmaceutical product records.

Use Product 360 for Life Sciences to achieve the following goals:

- Deliver a complete picture of products, ingredients, and packaging across various systems, business units, and regions.
- Master and maintain medicinal product information, such as clinical particulars, marketing authorization, orphan designation, and product classifications.
- Streamline exchange of medicinal product information between companies and regulatory agencies.
- Comply with the Identification of Medicinal Products (IDMP) standards.

Guidelines for importing assets

Consider the following guidelines before you import the industry 360 application assets:

- Set up the prerequisite MDM SaaS business application.
- Import the industry 360 application assets before you customize the business entities. You can safely import multiple industry 360 application assets that use different business entities and in different MDM SaaS business applications. When you import the assets in an environment that already has an industry 360 application with the same business entities, the import fails.
- After you import the assets, consider them as your custom assets.
- Once you deploy an industry 360 application, upgrading to a newer version of the industry 360 application isn't supported.

Guidelines for migrating assets

Consider the following guidelines before you migrate the industry 360 application assets to another environment:

- To migrate the industry 360 application assets to higher environments, such as QA and production, export the assets from the development environment. Then, import them into the QA and production environments. For more information about migrating assets, see *Migrating projects and assets*.
- Don't import the industry 360 application assets again into a higher environment.

Prerequisites

Before you deploy industry 360 application, perform the following prerequisites:

- Ensure that you have the license for Product 360 SaaS Edition.
- Ensure that you have the licenses required to manage connections, external data, and service rights.

  Note: The use of the industry 360 application doesn't confer any additional license or entitlement to license consumption beyond the terms specified in the applicable licensing agreements.
- Ensure that the version of the industry 360 application package matches the current MDM SaaS version where you import the industry 360 application assets.

  If the version of the industry 360 application package doesn't match the current MDM SaaS version, contact Informatica Global Customer Support to use the current version of the industry 360 application.

  To verify the MDM SaaS version, in Business 360 Console, click **About** in the IDMC Help menu and verify the build version.

  To verify the version of the industry 360 application, navigate to the readme text file in the extracted industry 360 application package.

CHAPTER 2

Product 360 for Life Sciences assets

Product 360 for Life Sciences is available as a package for installation on request.

The package includes the following predefined assets:

- Business entities with data quality rule associations and match models
- Reference data assets
- Relationships
- Custom reports
- Pages
- Search result layout components

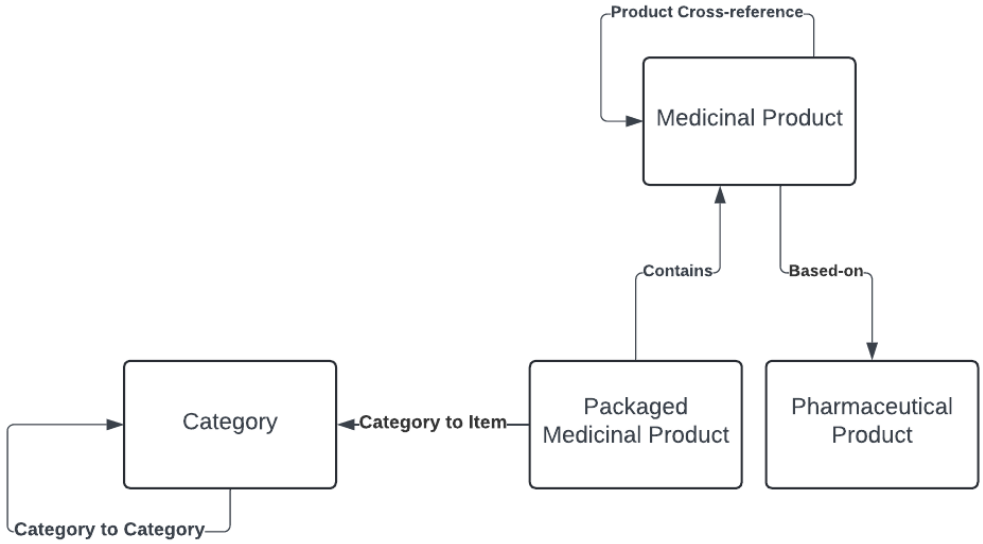

Note: Importing Product 360 for Life Sciences assets overwrites the existing Product 360 assets and your customization. Ensure to import the extension assets before you customize the Product 360 data model.

Data model attributes

Product 360 for Life Sciences uses the Medicinal Product, Pharmaceutical Product, and Packaged Medicinal Product business entities to store information.

The data model attributes provide metadata, such as business entities and field descriptions, to understand the data model of Product 360 for Life Sciences.

The following image shows the predefined relationships between business entities and their directions, as defined in Product 360 for Life Sciences:

Medicinal Product business entity data model

The Medicinal Product business entity stores information about medicinal products, such as clinical particulars, medicinal product name parts, marketing authorization details, and manufacturers. This business entity contains basic fields and field groups.

General fields of the Medicinal Product business entity

The general fields store basic information about a medicinal product, such as name, type, version, and medicinal product identifier.

The following table describes the general fields of the Medicinal Product business entity:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Additional Monitoring Indicator	X_infap360ls_additionalMonitoringIndicator	Boolean	NA	NA	Indicates whether a medicinal product requires additional monitoring for regulatory reasons.
Combined Pharmaceutical Dose Form	X_infap360ls_combinedPharmaceuticalDosageForm	Lookup	NA	infap360ls_CombinedPharmaceuticalDosageForm	Combined dose form of a multiple part medicinal product. For example, concentrate and diluent for solution for infusion or effervescent granules and suspension for oral suspension.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Full Indication Text	X_infap360ls_fullIndicationText	Text	4000	NA	Description of the indication of a medicinal product.
Image URL	infap360ls_image	Text	4000	NA	URL that directs to an image of a medicinal product.
Medicinal Product ID	X_infap360ls_mpid	Text	100	NA	Unique identifier (known as MPID) that is assigned to a medicinal product by a medicine regulatory agency.
Name	X_infap360ls_name	Text	500	NA	Name of a medicinal product.
Pediatric Use Indicator	X_infap360ls_paediatricUseIndicator	Boolean	NA	NA	Indicates whether a medicinal product is approved and clearly labeled for use in children.
Special Measures	X_infap360ls_specialMeasures	Text	255	NA	Extra measures defined for a medicinal product for regulatory reasons. For example, a requirement to conduct post-authorization studies.
Type	X_infap360ls_type	Lookup	NA	infap360ls_Type	Type of a medicinal product. For example, authorized medicinal product.
Version	X_infap360ls_version	Integer	NA	NA	Version of a medicinal product.

Additional Identifiers field group of the Medicinal Product business entity

The Additional Identifiers field group stores information about the identifiers that are recognized by the regulatory authorities in addition to the Medicinal Product ID (MPID).

The following table describes the fields of the Additional Identifiers field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Type	X_infap360ls_identifierType	Lookup	NA	infap360ls_IdentifierType	Type of an identifier that you can use in addition to the Medicinal Product ID (MPID). For example, National Drug Code.
Value	X_infap360ls_identifierValue	Text	100	NA	Unique ID of an additional identifier.

Description field group of the Medicinal Product business entity

The Description field group stores the description about a medicinal product.

The following table describes the fields of the Description field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Language	infap360ls_descriptionLanguage	Lookup	NA	Language	Language of the description of a medicinal product
Long Description	infap360ls_longDescription	Text	4000	NA	Detailed description of a medicinal product.
Short Description	infap360ls_shortDescription	Text	255	NA	Short description of a medicinal product.

Medicinal Product Name Parts field group of the Medicinal Product business entity

The full name of a medicinal product is a consolidated name that includes fragmented name parts in compliance with the naming convention of an authorizing agency. The Medicinal Product Name Parts field group contains these fragmented name parts.

The following table describes the fields of the Medicinal Product Name Parts field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Name	X_infap360ls_productName	Text	500	NA	Part name of a medicinal product.
Type	X_infap360ls_nameType	Lookup	NA	infap360ls_NamePartsType	Part type of a medicinal product name. For example, legacy name part, scientific name part, or strength part.

Status field group of the Medicinal Product business entity

The Status field group stores information about the status type and value of a medicinal product.

The following table describes the fields of the Status field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Type	X_infap360ls_statusType	Lookup	NA	infap360ls_StatusType	Status type of a medicinal product. For example, the legal status of supply.
Value	X_infap360ls_statusValue	Dependant Lookup	NA	infap360ls_StatusValue	Value of a medicinal product status. For example, the medicinal product is subject to medical prescription, or the medicinal product is not subject to medical prescription.

Country and Jurisdiction field group of the Medicinal Product business entity

The Country and Jurisdiction field group stores information about the geographical location where a medicinal product name is authorized.

The following table describes the fields of the Country and Jurisdiction field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Country	X_infap360ls_country	Lookup	NA	Country	Country where a medicinal product name is authorized.
Jurisdiction	X_infap360ls_jurisdiction	Lookup	NA	infap360ls_Jurisdiction	Jurisdiction within a country where a medicinal product name is authorized.
Language	X_infap360ls_language	Lookup	NA	Language	Regional language of the country.

Contraindications field group of the Medicinal Product business entity

The Contraindications field group stores information about contraindication, comorbidity, and other related details of a disease, symptom, or procedure. This information clarifies why a medicinal product might be harmful and must not be administered to individuals with certain medical conditions.

The following table describes the fields of the Contraindications field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Comorbidity	X_infap360ls_contraComorbidity	Lookup	NA	infap360ls_Comorbidity	Additional medical condition of a person.
Contraindication Text	X_infap360ls_contraindicationText	Text	255	NA	Explanation as to why a person must not be subjected to a medicinal product that might be harmful. This field can contain a symptom or a medical condition.
Disease Status	X_infap360ls_contraDiseaseStatus	Lookup	NA	infap360ls_DiseaseStatus	Status of the disease. For example, acute, chronic, or recurrent.
Disease, Symptom, or Procedure	X_infap360ls_contraDiseasesSymptomProcedure	Lookup	NA	infap360ls_DiseasesSymptomProcedure	Disease, symptom, or procedure for which a medicinal product is not suitable.

Therapeutic Indicators field group of the Medicinal Product business entity

The Therapeutic Indicators field group stores information about medical conditions, such as comorbidity and disease status, for which a medicinal product can be prescribed.

The following table describes the fields of the Therapeutic Indicators field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Comorbidity	X_infap360ls_comorbidity	Lookup	NA	infap360ls_Comorbidity	Additional medical condition of a person.
Disease Status	X_infap360ls_diseaseStatus	Lookup	NA	infap360ls_DiseaseStatus	Indicates the status of disease, such as acute, chronic, or recurrent.
Disease, Symptom, or Procedure	X_infap360ls_diseasesSymptomProcedure	Lookup	NA	infap360ls_DiseasesSymptomProcedure	Disease, symptom, or procedure for which a medicinal product is suitable.
Indication	X_infap360ls_indication	Text	255	NA	Description of a medical condition for which a medicinal product is suitable.
Intended Effect	X_infap360ls_intendedEffect	Lookup	NA	infap360ls_IntendedEffect	Type of result intended for the target medical condition, such as treatment, diagnosis, or prevention.
Undesirable Effects	X_infap360ls_undesirableEffects	Text	255	NA	Severe painful or unpleasant reactions induced by the use of a medicinal product.

Interactions field group of the Medicinal Product business entity

The Interactions field group stores information about the interaction details of a medicinal product.

The following table describes the fields of the Interactions field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Effect	X_infap360ls_interactionEffect	Lookup	NA	infap360ls_InteractionEffect	Effect of an interaction.
Interaction	X_infap360ls_interaction	Text	255	NA	Description of an interaction of food or drug with a medicinal product, such as drug to drug, drug to food, or drug to medical condition interactions.
Type	X_infap360ls_interactionType	Lookup	NA	infap360ls_InteractionType	Type of interaction, such as drug to drug interaction, or drug to food interaction.

Orphan Designation field group of the Medicinal Product business entity

Orphan Designation is a status assigned to a medicinal product that is intended to use for a rare condition. The Orphan Designation field group stores information about the orphan indication type, status, and identification number.

The following table describes the fields of the Orphan Designation field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Number	X_infap360ls_number	Text	100	NA	Identification number of an orphan indication.
Status	X_infap360ls_orphanStatus	Lookup	NA	infap360ls_OrphanStatus	Status of an orphan indication, such as expired, not renewed, or withdrawn.
Type	X_infap360ls_orphanIndicationType	Lookup	NA	infap360ls_OrphanIndicationType	Type of orphan indication, such as marketing authorization, or parallel trade approval.

Marketing Authorization field group of the Medicinal Product business entity

Marketing authorization is an approval granted by a regulatory authority, such as FDA or EMA, that permits a company to market, sell, and distribute a medicinal product in their jurisdiction.

The following table describes the fields of the Marketing Authorization field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Country	X_infap360ls_country	Lookup	NA	Country	Country where a medicinal product was granted authorization to market.
Authorization Number	X_infap360ls_authorizationNumber	Text	100	NA	Marketing authorization number or equivalent identifier assigned by a competent authority.
Regulator	X_infap360ls_regulator	Text	100	NA	Medicines regulatory authority that granted marketing authorization can include the organization identifier (ORG ID) and the related location identifier (LOC ID).
Holder	X_infap360ls_holder	Text	100	NA	Holder of the marketing authorization of a medicinal product in each country.
Authorization Status	X_infap360ls_marketingStatus	Lookup	NA	infap360ls_MarketingStatus	Status of authorization, such as draft, application received, pending, or expired.
Authorization Status Updated Date	X_infap360ls_marketingStatusDate	Date-Time	NA	NA	Date when an authorization status was last updated.
Date of First Authorization	X_infap360ls_dateOfFirstAuthorization	Date-Time	NA	NA	Date when the first authorization was granted by a competent authority.
International Birthdate	X_infap360ls_internationalBirthdate	Date-Time	NA	NA	Date when a medicinal product received its first marketing authorization in any country in the world.

Procedures field group of the Medicinal Product business entity

The Procedures field group within the Marketing Authorization field group stores information about a marketing authorization procedure, such as identifier, type, and time period of the procedure.

The following table describes the fields of the Procedures field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
End Date	X_infap360ls_endDate	Date-Time	NA	NA	Date when a marketing authorization procedure ended.
Identifier	X_infap360ls_procedureId	Text	100	NA	Procedure number assigned to a marketing authorization procedure by a competent authority.
Start Date	X_infap360ls_startDate	Date-Time	NA	NA	Date when a marketing authorization procedure started.
Type	X_infap360ls_procedureType	Lookup	NA	infap360ls_ProcedureType	Type of procedure or medicine approval system based on which the initial marketing authorization application is being assessed or was granted by a regulatory authority. For example, centralized procedure, EU registration procedure, or parallel trade procedure.

Marketing Status field group of the Medicinal Product business entity

The Marketing Status field group within the Marketing Authorization field group stores information about the marketing authorization status.

The following table describes the fields of the Marketing Status field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Start Date	X_infap360ls_marketingDateStart	Date-Time	NA	NA	Date when a medicinal product is authorized to be marketed in a country.
End Date	X_infap360ls_marketingDateStop	Date-Time	NA	NA	Date when the marketing authorization status of a medicinal product ends in a country. Applicable if the medicinal product is no longer marketed.

Product Classification field group of the Medicinal Product business entity

The Product Classification field group stores information about a code system based on which a medicinal product is classified.

The following table describes the fields of the Product Classification field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Code System	X_infap360ls_codeSystem	Lookup	NA	infap360ls_ProdClassCodeSystem	Code system that a product classification uses, such as Anatomical Therapeutic Chemical Classification (ATC).
Value	X_infap360ls_prodClassValue	Text	255	NA	Product classification that's assigned based on the specified code system.

Attached Documents field group of the Medicinal Product business entity

The Attached Documents field group of the Medicinal Product business entity stores document information, such as document type, identifier, and language.

The following table describes the fields of the Attached Documents field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Document URL	X_infap360ls_documentURL	Text	4000	NA	URL to access a document.
Effective Date	X_infap360ls_effectiveDate	Date-Time	NA	NA	Date when an attached document came into effect.
Identifier	X_infap360ls_attachDocIdentifier	Text	100	NA	Identifier of an attached document.
Language	X_infap360ls_documentLanguage	Lookup	NA	Language	Language that an attached document uses.
Type	X_infap360ls_documentType	Lookup	NA	infap360ls_DocumentType	Type of an attached document.

Manufacturers field group of the Medicinal Product business entity

The Manufacturers field group stores name of manufacturers of a medicinal product.

The following table describes the fields of the Manufacturers field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Manufacturer	X_infap360ls_manufacturerValue	Text	255	NA	Name of a manufacturer.

Pharmaceutical Product business entity data model

A medicinal product can contain one or more pharmaceutical products. The Pharmaceutical Product business entity stores information about the qualitative and quantitative composition of a medicinal product in the pharmaceutical form, such as the administrable dose form, administration route presentation unit, and ingredients. This business entity contains basic fields and field groups.

General fields of the Pharmaceutical Product business entity

The general fields store information about a pharmaceutical product, such as identifier, dose form, and route of administration.

The following table describes the general fields of the Pharmaceutical Product business entity:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Administrable Dose Form	X_infap360ls_administrableDosageForm	Lookup	NA	infap360ls_AdministrableDosageForm	Physical form in which a medication is assembled and dispensed for patient use, such as injections, inhalers, or mouthwash.
Name	X_infap360ls_name	Text	255	NA	Name of a pharmaceutical product.
Pharmaceutical Product ID	X_infap360ls_phpid	Text	100	NA	Unique identifier (known as PhPID) that is assigned to a pharmaceutical product.
Route of Administration	X_infap360ls_routeOfAdministration	Lookup	NA	infap360ls_RouteOfAdministration	Route by which a pharmaceutical product is administered for patient use, such as injection, oral use, or topical use.
Unit of Presentation	X_infap360ls_unitOfPresentation	Lookup	NA	infap360ls_UnitOfPresentation	Unit in which a pharmaceutical product is administered, such as cylinder, implant, or puff.

Pharmaceutical Product ID Sets field group of the Pharmaceutical Product business entity

The Pharmaceutical Product ID Sets field group stores basic information about pharmaceutical product identifiers that are crucial for tracking and lineage tracing of pharmaceutical products in a supply chain.

The following table describes the fields of the Pharmaceutical Product ID Sets field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Type	X_infap360ls_phpidType	Lookup	NA	infap360ls_PhpidSetType	Type of pharmaceutical product identifier.
Value	X_infap360ls_value	Text	100	NA	Value of the pharmaceutical product identifier.

Ingredients field group of the Pharmaceutical Product business entity

The Ingredients field group stores information about the ingredients of a pharmaceutical product.

The following table describes the fields of the Ingredients field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Role	X_infap360ls_role	Lookup	NA	infap360ls_IngredientRole	Role of an ingredient, such as active, bioenhancer, or excipient.
Substance	X_infap360ls_substance	Lookup	NA	infap360ls_Substance	Components that a pharmaceutical product contains, such as acetaminophen, magnesium stearate, povidone K30, microcrystalline cellulose.
Unique Ingredient ID	X_infap360ls_unii	Text	100	NA	Unique identifier of an ingredient.

Packaged Medicinal Product business entity

A packaged medicinal product is a product that's packaged and ready for distribution or sale. The packaged medicinal product comprising multiple components represents the final product that distributors can send to pharmacies, hospitals, and other healthcare providers.

The Packaged Medicinal Products business entity is a modification of the predefined Item business entity in Product 360 SaaS, which stores information about medicinal products, such as packaging containers, selling price, shelf life and storage, and manufacturer.

General fields of the Packaged Medicinal Product business entity

The general fields store basic information about a packaged medicinal product, such as unique identifier, manufacturer details, and availability and expiration dates.

The following table describes the general fields of the Packaged Medicinal Product business entity:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Availability	availability	Lookup	NA	ItemAvailability	Availability information of a packaged medicinal product.
Availability Date	availabilityDate	Date	NA	NA	Date from when a packaged medicinal product is available.
Brand	brand	Text	255	NA	Brand name of a packaged medicinal product.
Country of Origin	countryOfOrigin	Lookup	NA	Country	Country where a packaged medicinal product is manufactured.
Expiration Date	expirationDate	Date	NA	NA	Date after which a packaged medicinal product expires.
GTIN	gtin	Text	14	NA	Global Trade Item Number, which is an identifier for a packaged medicinal product assigned by GS1.
Manufacturer	manufacturer	Text	255	NA	Manufacturer of a packaged medicinal product.
Manufacturer GLN	manufacturerGLN	Text	13	NA	Manufacturer Global Location Number, which identifies the name and address of the company that manufactures a packaged medicinal product.
Manufacturer Product Number	manufacturerProductNumber	Text	255	NA	Stock Keeping Unit (SKU) number of a packaged medicinal product specified by a manufacturer.
Packaged Medicinal Product ID	identifier	Text	255	NA	Unique identifier of a packaged medicinal product (known as PCID) that is assigned by a product management service.
Status	status	Lookup	NA	ItemStatus	Status of a packaged medicinal product.
Sub-brand	subBrand	Text	255	NA	Sub-brand of a packaged medicinal product.
Image URL	X_infap360ls_pkgdImageUrl_image	Text	4000	NA	URL that directs to an image of a packaged medicinal product.

Description field group of the Packaged Medicinal Product business entity

The Description field group stores the description details of a packaged medicinal product.

The following table describes the fields of the Description field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Language	descriptionLanguage	Lookup	NA	Language	Language of description for a packaged medicinal product.
Long Description	longDescription	Text	4000	NA	Detailed description for a packaged medicinal product.
Short Description	shortDescription	Text	255	NA	Short description for a packaged medicinal product.
Title	productTitle	Text	255	NA	Title of a packaged medicinal product.

Meta Information field group of the Packaged Medicinal Product business entity

The Meta Information field group stores the meta data information that defines a packaged medicinal product. Search engines display these details on their search result pages.

The following table describes the fields of Meta Information field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Language	metaInformationLanguage	Lookup	NA	Language	Language of the meta information that defines a packaged medicinal product.
Meta Description	metaDescription	Text	255	NA	Short description that explains about a packaged medicinal product.
Meta Title	metaTitle	Text	255	NA	Short text that defines a packaged medicinal product.

Product Highlights field group of the Packaged Medicinal Product business entity

The Product Highlights field group stores information that highlights a packaged medicinal product.

The following table describes the fields of the Product Highlights field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Language	producthighlightsLanguage	Lookup	NA	Language	Language used for highlighting a packaged medicinal product.
Product Highlight	productHighlight	Text	4000	NA	Descriptive text that highlights a packaged medicinal product.

Tags field group of the Packaged Medicinal Product business entity

The Tags field group stores the relevant hashtags to associate with a packaged medicinal product.

The following table describes the fields of the Tags field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Language	tagsLanguage	Lookup	NA	Language	Language of the hashtags associated with a packaged medicinal product.
Tag	tag	Text	255	NA	Relevant hashtag to associate with a packaged medicinal product.

Keywords field group of the Packaged Medicinal Product business entity

The Keywords field group stores the relevant keywords to associate with a packaged medicinal product.

The following table describes the fields of the Keywords field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Keyword	keyword	Text	255	NA	Words that customers might use to find a packaged medicinal product on a search page or an online store.
Language	keywordsLanguage	Lookup	NA	Language	Language of keywords to associate with a packaged medicinal product.

Selling Price field group of the Packaged Medicinal Product business entity

The Selling Price field group stores the selling price details of a packaged medicinal product.

The following table describes the fields of the Selling Price field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Amount	sellingPriceAmount	Decimal	NA	NA	Price of a packaged medicinal product.
Currency	sellingCurrency	Lookup	NA	Currency	Currency in which a selling price is specified.
Territory	sellingTerritory	Lookup	NA	Country	Region in which a selling price is valid.
Type	sellingPriceType	Lookup	NA	SellingPriceType	Type of a selling price, such as gross list price or net list price.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Valid from	sellingValidFrom	Date	NA	NA	Date from when a selling price is valid.
Valid to	sellingValidTo	Date	NA	NA	Date until when a selling price is valid.

Batch Identifiers field group of the Packaged Medicinal Product business entity

The Batch Identifiers field group stores batch details of a packaged medicinal product.

The following table describes the fields of the Batch Identifiers field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Batch ID	X_infap360ls_baid	Text	100	NA	Batch identifier (BAID) of a packaged medicinal product.
Expiration Date	X_infap360ls_expirationDate	Date - time	NA	NA	Date after which a packaged medicinal product expires.

Packaging Containers field group of the Packaged Medicinal Product business entity

A packaging container is an item that stores a medicinal product. The Packaging Containers field group stores information about packaging container details, such as type and quantity.

The following table describes the fields of the Packaging Containers field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Quantity	X_infap360ls_packageItemContainerQuantity	Integer	NA	NA	Number of medicinal products contained in a packaging container. For example, a carton might contain two vials of solvent and four vials of powder. Here, the quantity can be 1, 2, or 4 based on the type of packaging container.
Type	X_infap360ls_packageItemContainerType	Lookup	NA	infap360ls_PackageItemContainerType	Type of the packaging container, such as blister, vial, or bottle.

Shelf Life and Storage field group of the Packaged Medicinal Product business entity

The Shelf Life and Storage field group stores the shelf life and storage information as approved in terms of marketing authorization.

The following table describes the fields of the Shelf Life and Storage field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Shelf Life	X_infap360ls_shelfLife	Text	100	NA	Duration of a shelf life.
Shelf Life Type	X_infap360ls_shelfLifeType	Lookup	NA	infap360ls_ShelfLifeType	Type of shelf life. For example, shelf life after dilution or reconstitution according to directions, or shelf life from the activity reference time stated on the label.
Special Precautions for Storage	X_infap360ls_specialPrecautionsforStorage	Lookup	NA	infap360ls_SpecialPrecautionsforStorage	Special precautions for storage. For example, do not expose to extreme heat or store below 30°C.
Time Period Unit	X_infap360ls_timePeriodUom	Lookup	NA	infap360ls_TimePeriodUom	Units of measurement of shelf life, such as day, hour, or minute.

Identifiers field group of the Packaged Medicinal Product business entity

The Identifiers field group stores information about identification of a packaged medicinal product.

The following table describes the fields of the Identifiers field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Type	X_infap360ls_packageIdentifierType	Lookup	NA	infap360ls_PackageIdentifierType	Type of identifier, such as data carrier identifier.
Value	X_infap360ls_packageIdentifierValue	Text	100	NA	Value of identifier, such as barcode number.

Manufactured Item field group of the Packaged Medicinal Product business entity

The Manufactured Item field group stores information about a manufactured item in a packaged medicinal product. A packaged medicinal product can contain one or more manufactured items.

The following table describes the fields of the Manufactured Item field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Manufactured Dose Form	X_infap360ls_manufacturedDosageForm	Lookup	NA	infap360ls_ManufacturedDosageForm	Dose form of a manufactured item, such as aerosol-spray, chewable capsule-soft, or cachet.
Manufactured Item Quantity	X_infap360ls_manufacturedItemQuantity	Interger	NA	NA	Quantity or countable units of a manufactured item in a packaged medicinal product.
Unit of Presentation	X_infap360ls_unitofPresentation	Lookup	NA	infap360ls_UnitOfPresentation	Describes the strength or quantity of a manufactured item in a packaged medicinal product, such as actuation, patch, or tablet.

Package Components field group of the Packaged Medicinal Product business entity

The Package Components field group stores information about the type and material that you use to package a medicinal product.

The following table describes the fields of the Package Components field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Component Material	X_infap360ls_componentMaterial	Lookup	NA	infap360ls_ComponentMaterial	Material used in packaging, such as aluminium, low density polyethylene, or tin.
Component Type	X_infap360ls_componentType	Lookup	NA	infap360ls_ComponentType	Type of the material used in packaging, such as child-resistant closure or stopper.

Physical Characteristics field group of the Packaged Medicinal Product business entity

The Physical Characteristics field group stores basic information about the physical dimensions of a packaged medicinal product.

The following table describes the fields of the Physical Characteristics field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Depth	X_infap360ls_depth	Text	100	NA	Depth of a packaged medicinal product.
External Diameter	X_infap360ls_externalDiameter	Text	100	NA	External diameter of a packaged medicinal product.
Height	X_infap360ls_height	Text	100	NA	Height of a packaged medicinal product.
Length Unit	X_infap360ls_lengthUom	Lookup	NA	infap360ls_LengthUom	A measure, such as cm, inch, or feet, used for the depth, external diameter, height, and width of a packaged medicinal product.
Normal Volume	X_infap360ls_normalVolume	Text	100	NA	Normal volume of a packaged medicinal product.
Volume Unit	X_infap360ls_volumeUom	Lookup	NA	infap360ls_VolumeUom	Unit of volume of a packaged medicinal product, such as fl.oz, gal, or ml.
Weight	X_infap360ls_weight	Text	100	NA	Weight of a packaged medicinal product.
Weight Unit	X_infap360ls_weightUom	Lookup	NA	infap360ls_WeightUom	Unit of weight of a packaged medicinal product, such as kg, g, or mg.
Width	X_infap360ls_width	Text	100	NA	Width of a packaged medicinal product.

Manufacturers field group of the Packaged Medicinal Product business entity

The Manufacturers field group stores information about manufacturers of a packaged medicinal product.

The following table describes the fields of the Manufacturers field group:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Manufacturer	X_infap360ls_manufacturerValue	Text	255	NA	Manufacturer of a packaged medicinal product.

Pages

The Product 360 for Life Sciences package contains predefined pages. Use the Create page type to create records. Use the View and Edit page type to view and edit records.

The following table describes the predefined pages for the Medicinal Product, Packaged Medicinal Product, and Pharmaceutical Product business entities:

Page Name	Description	Assigned User Roles
Create Page Medicinal Product	A page to create a Medicinal Product record.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Create Page Packaged Medicinal Product	A page to create a Packaged Medicinal Product record.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Create Page Pharmaceutical Product	A page to create a Pharmaceutical Product record.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Edit Page Medicinal Product	A page to view or edit a Medicinal Product record.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Edit Page Packaged Medicinal Product	A page to view or edit a Packaged Medicinal Product record.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Edit Page Pharmaceutical Product	A page to view or edit a Pharmaceutical Product record.	- MDM Business User - Product 360 Manager - Product 360 Read Only

For more information about creating pages, see *Design the User Interface*.

Search result layout components

The Product 360 for Life Sciences package contains predefined search result layout components.

The following table describes the search result layout components for the Medicinal Product, Packaged Medicinal Product, and Pharmaceutical Product business entities:

Search Result Layout Component Name	Description	Assigned User Roles
Search Layout Medicinal Product	Search layout to display search results of the Medicinal Product records.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Search Layout Packaged Medicinal Product	Search layout to display search results of the Packaged Medicinal Product records.	- MDM Business User - Product 360 Manager - Product 360 Read Only
Search Layout Pharmaceutical Product	Search layout to display search results of the Pharmaceutical Product records.	- MDM Business User - Product 360 Manager - Product 360 Read Only

For more information about creating pages, see *Design the User Interface*.

Match Model

A match model determines how your data is matched. You can use the predefined match model to identify and resolve duplicate records.

Product 360 for Life Sciences uses the predefined match model, Match Model for Medicinal Product Deduplication, to match and merge duplicate Medicinal Product business entity records.

The following table describes the match model properties for the Medicinal Product business entity:

Declarative Rule Rank	Match Objective	Match Strategy	Match Fields	Description
1	Resolve Duplicates	Exact	X_infap360ls_mpid	Identifies exactly matching medical products based on their identifiers.
2	Resolve Duplicates	Fuzzy	Exact match fields: - X_infap360ls_Identifier > X_infap360ls_IdentifierType - X_infap360ls_Identifier > X_infap360ls_IdentifierValue Fuzzy match fields: - X_infap360ls_Manufacturer X_infap360ls_manufacturerValue	Identifies similar medicinal products based on exactly matching identifier value and type and similar manufacturer value.
3	Resolve Duplicates	Fuzzy	Exact match fields: - X_infap360ls_NameParts > X_infap360ls_nameType Fuzzy match fields: - X_infap360ls_NameParts > X_infap360ls_productName	Identifies similar medicinal products based on exactly matching medicinal product name type and similar medicinal name parts.

Product 360 for Life Sciences uses the predefined match model, Match Model for Pharmaceutical Product Deduplication, to match and merge duplicate Pharmaceutical Product business entity records.

The following table describes the match model properties for the Pharmaceutical Product business entity:

Declarative Rule Rank	Match Objective	Match Strategy	Match Fields	Description
1	Resolve Duplicates	Exact	X_infap360ls_phpid	Identifies exactly matching pharmaceutical products based on their identifiers.
2	Resolve Duplicates	Exact	Exact match fields: - infap360ls_PhpidSets > X_infap360ls_phpidType - infap360ls_PhpidSets > X_infap360ls_value	Identifies similar pharmaceutical products based on exactly matching identifier type and identifier value.

Product 360 for Life Sciences uses the predefined match model, Match Model for Packaged Medicinal Product Deduplication, to match and merge duplicate Packaged Medicinal Product business entity records.

The following table describes the match model properties for the Packaged Medicinal Product business entity:

Declarative Rule Rank	Match Objective	Match Strategy	Match Fields	Description
1	Resolve Duplicates	Exact	identifier	Identifies exactly matching packaged medicinal products based on their identifiers.
2	Resolve Duplicates	Fuzzy	Exact match fields: - X_infap360ls_PackagedItemContainer > X_infap360ls_PackagingIdentifier > X_infap360ls_packageIdentifierValue - X_infap360ls_PackagedItemContainer > X_infap360ls_PackagingIdentifier > > X_infap360ls_packageIdentifierType Fuzzy match fields: - X_infap360ls_PackagedItemContainer > X_infap360ls_Manufacturer > X_infap360ls_manufacturerValue	Identifies similar packaged medicinal products based on exactly matching identifier value and type and similar manufacturer value.

Data quality rule associations

You can use the predefined rule associations to cleanse, standardize, and validate the medicinal product and packaged medicinal product records. When you import source records, the rule associations validate and transform the records.

The following table describes the basic rule associations that the Medicinal Product business entity contains:

Rule Association Name	Function Name	Applied Field	Description
MPID Convert Uppercase	Uppercase	Medicinal Product ID	Converts lowercase values to uppercase.

The following table describes the advanced rule associations that the Medicinal Product business entity contains:

Rule Association Name	Rule Specification Name	Applied Field	Description
MPID Check	MPID Rule Check	Medicinal Product ID	Validates whether the applied field value isn't null and is in a valid format. This rule association internally uses the All ID Country Code Check rule specification to validate the applied field values.
Identifier Type NDC check	NDC Rule Check	Additional Identifiers.Value	Validates whether the applied field value isn't null and is in a valid format. This rule association internally uses the NDC Value Check rule specification to validate the applied field values.
MPID Rule Check	MPID Rule Check	Medicinal Product ID	Validates the format of the applied field values based on the following conditions: - The first two characters are a valid country code. - The length of the input is less than or equal to 15. - Characters 3 through 15 are numeric and contains two hyphens. This rule association internally uses All ID Country Code Check rule specification to validate the applied field values.

Rule Association Name	Rule Specification Name	Applied Field	Description
All ID Country Code Check	All ID Country Code Check	Medicinal Product ID	Converts lowercase values to uppercase. This rule association internally uses Country Code Dictionary to validate the applied field values.
NDC Rule Check	NDC Rule Check	Additional Identifiers.Value	Validates the format of the values when the identifier type value is equal to `National Drug Code`. This rule association internally uses NDC Value Check rule specification to validate the applied field values.
NDC Value Check	NDC Value Check	Additional Identifiers.Value	Validates the format of the applied field values based on the following conditions: - The length of the input is less than or equal to 14. - Characters are numeric. - Contains two hyphens. This rule association internally uses NDC Length Check rule specification to validate the applied field values.
NDC Length Check	NDC Length Check	Additional Identifiers.Value	Validates whether the length of the applied field value isn't null and is less than or equal to 14.

The following table describes the basic rule associations that the Packaged Medicinal Product business entity contains:

Rule Association Name	Function Name	Applied Field	Description
Check for minimum length of 14	Minimum Length	GTIN	Validates whether the length of the applied field value is greater than or equal to 14.
Check only digits are allowed	Allowed Characters	GTIN	Validates whether the applied field value contains only numbers.
Check only digits are allowed	Allowed Characters	Manufacturer GLN	Validates whether the applied field value contains only numbers.

Rule Association Name	Function Name	Applied Field	Description
Check for minimum length of 13	Minimum Length	Manufacturer GLN	Validates whether the length of the applied field value is greater than or equal to 13.
Valid from must be earlier than Valid to	Lesser Than Date	Selling price.Valid from	Validates whether the date value precedes the Validity End Date field value.
PCID Convert Upper	Uppercase	Packaged Medicinal Product ID	Converts lowercase values to uppercase.

The following table describes the advanced rule associations that the Packaged Medicinal Product business entity contains:

Rule Association Name	Rule Specification Name	Applied Field	Description
PCID Check	PCID Rule Check	Packaged Medicinal Product ID	Validates whether the applied field value isn't null and is in a valid format. This rule association internally uses the All ID Country Code Check rule specification to validate the applied field values.
PCID Rule Check	PCID Rule Check	Packaged Medicinal Product ID	Validates the format of the applied field values based on the following conditions: - First two characters are a valid country code. - Length of the input is less than or equal to 18. - Characters 3 through 18 are numeric and contains three hyphens. This rule association internally uses All ID Country Code Check rule specification to validate the applied field values.
All ID Country Code Check	All ID Country Code Check	Packaged Medicinal Product ID	Converts lowercase values to uppercase. This rule association internally uses Country Code Dictionary to validate the applied field values.

Reports

Use the predefined reports to help you visualize data in the form of charts and report tables in Product 360 SaaS.

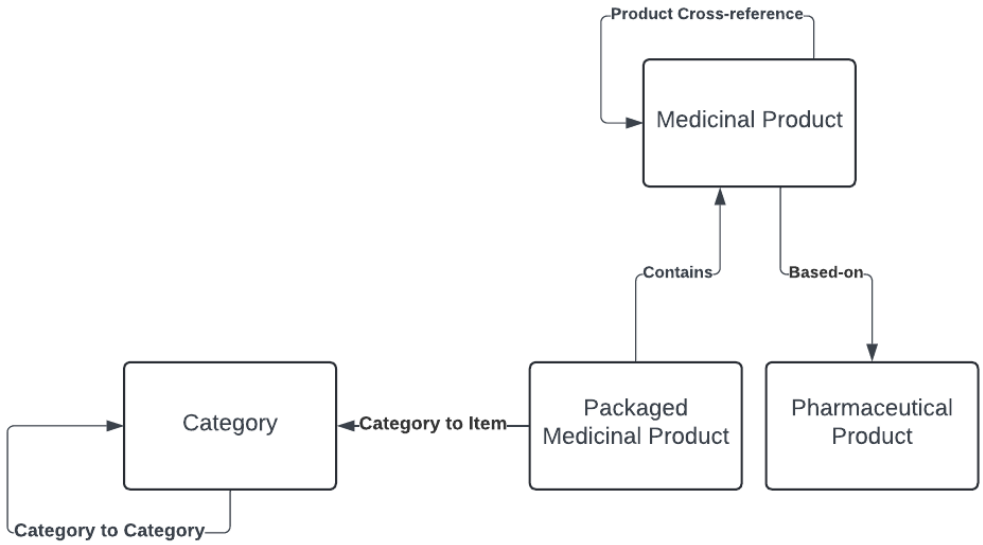

The following table describes the predefined reports for Product 360 for Life Sciences:

Report Name	Internal ID	Description
Medicinal Product by Type	infap360ls_medicinal_product_by_type	Displays the number of Medicinal Product records based on the type of medicinal products.
Products by Packaged Item Type	infap360ls_products_by_packaged_item_type	Displays the number of Packaged Medicinal Product records based on the type of packaged items.
Pharmaceutical Products by Active Substances	infap360ls_pharmaceutical_products_by_active_substances	Displays the number of Pharmaceutical Product records based on active substances.
Pharmaceutical Products by Unit of Presentation	infap360ls_pharmaceutical_products_by_unit_of_presentation	Displays the number of Pharmaceutical Product records based on the unit of presentation.
Pharmaceutical Products by Route of Administration	infap360ls_pharmaceutical_products_by_route_of_administration	Displays the number of Pharmaceutical Product records based on the route of administration.

Relationships

You can use the predefined relationships between the Medicinal Product and Pharmaceutical Product business entities in Product 360 for Life Sciences.

The following image shows the predefined relationships between business entities and their directions, as defined in Product 360 for Life Sciences:

The following table describes the predefined relationships that Product 360 for Life Sciences includes:

Relationship Name	Internal ID	Business Entity 1	Business Entity 2	Direction
Based-on	infap360ls_based_on	Medicinal Product	Pharmaceutical Product	Medicinal Product -> Pharmaceutical Product
Contains	infap360ls_rel_contains	Packaged Medicinal Product	Medicinal Product	Packaged Medicinal Product -> Medicinal Product
Product Cross-reference	infap360ls_cross_reference	Medicinal Product	Medicinal Product	Medicinal Product -> Medicinal Product

CHAPTER 3

Deploying Product 360 for Life Sciences

To deploy Product 360 for Life Sciences, perform the following tasks:

1. Download and extract the extension package.
2. Import the data model, the predefined custom pages, and the search result layout components.
3. Add predefined pages and search result layout components.
4. Import reference data code values into reference data assets.

Note: To import the data model, pages, search result layout components, and reference data assets, ensure that you belong to the Designer and MDM Designer user roles. Ensure that you don't belong to the Admin user role.

Downloading and extracting the Product 360 for Life Sciences package

To get the link to download the Product 360 for Life Sciences package, contact Informatica Global Customer Support.

After you download the Product 360 for Life Sciences package, extract the package on your machine. The package contains the data model attributes, relationships, and predefined custom pages for Product 360.

The extracted package contains the following files and folders:

File or Folder Name	Description
`1_MDM_Assets.zip`	Contains the following attributes: - Data model attributes. - Predefined custom pages and search result layout components. - Relationships.
`Reference Data`	Contains files that store code lists and values.

Importing data model, pages, and search result layout components

After you download and extract the extension package, import the data model assets, the predefined pages, and search result layout components.

Note: Before importing the data model, pages, and reference data assets, ensure that you are assigned to the Designer, MDM Designer, Reference 360 User, and Reference 360 Business Steward user roles, and not to the Admin user role.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   `<Extracted extension package>/1_MDM_Assets.zip`
3. Click **Open**.
4. Ensure that all the assets are selected.
5. Click **Import**.
6. On the **My Import/Export Logs** page, verify whether the import job is successful.

Adding predefined pages and components

You can add the predefined pages and search result layout components of the Medicinal Product, Packaged Medicinal Product, and Pharmaceutical Product business entities to Product 360. Ensure that you have the Admin user role.

1. In Business 360 Console, click **Explore** > **Product360**.
2. Click the business application.
3. On the **Pages** tab, select **Medicinal Product**.
4. On the **Create** tab, click **Add Page**.

   A blank row appears.
5. To select a page, click the asset picker.
6. On the **Select a page** window, select **Create Page Medicinal Product**, and click **Select**.

   The selected page appears in the row.
7. To assign user roles to the page, from the list of user roles, select one or more user roles.

   For more information about the user roles assigned to pages, see "Pages" on page 28.
8. On the **View and Edit** tab, click **Add Page**.

   A blank row appears.
9. To select a page, click the asset picker.
10. On the **Select a page** window, select **Edit Page Medicinal Product**, and assign the page to one or more user roles.

    For more information about the user roles assigned to pages, see "Pages" on page 28.

11. In the left pane, select the following business entities, and repeat steps 4 through 10.

Business Entity	Page Name
Packaged Medicinal Product	- Create Page Packaged Medicinal Product - Edit Page Packaged Medicinal Product
Pharmaceutical Product	- Create Page Pharmaceutical Product - Edit Page Pharmaceutical Product

12. On the **Seach** tab, in the **Business Entities** section, select **Medicinal Product**.
13. In the **Search Result Layouts: Medicinal Product** section, click **Add Search Result Layout**.

    A blank row appears.
14. To select a component, click the asset picker.

    The **Select a Component** window appears.
15. On the **Select a Component** window, select **Search Layout Medicinal Product**, and assign the component to one or more user roles.

    For more information about the user roles assigned to search result layout components, see "Search result layout components" on page 29.
16. In the left pane, select the following business entities, and repeat steps 13 through 15.

Business Entity	Search Result Layout Component
Packaged Medicinal Product	Search Layout Packaged Medicinal Product
Pharmaceutical Product	Search Layout Pharmaceutical Product

For more information about how to assign pages to user roles, see *Assign pages to user roles*.

Importing reference data assets

After you import MDM SaaS assets, import reference data code values in bulk from CSV files into reference data assets. Product 360 for Life Sciences uses reference data from sources, such as Fast Healthcare

Interoperability Resources (FHIR) and Substances, Products, Organisations, and Referentials (SPOR) - Referentials Management System (RMS).

The following table describes the files and folders in the extracted reference data directory:

File or Folder Name	Description
`FHIR Based Reference Data`	The folder that contains the FHIR lookup code values folders. The FHIR Based Reference Data folder contains the following folders: - `_1`. Contains the parent lookup code values. - `_2`. Contains the child lookup code values. - `LoadReferenceData.py`. Python script to import FHIR based reference data.
`SPOR Based Reference Data`	The folder that contains the SPOR lookup code values folders. The SPOR Based Reference Data folder contains the following folders: - `_1`. Contains the parent lookup code values. - `_2`. Contains the child lookup code values. - `LoadReferenceData.py`. Python script to import SPOR based reference data.

Based on your requirements, you can import the FHIR or SPOR based reference data. You can also use code values from both FHIR and SPOR based reference data to customize reference data for your requirements. After you update the required code values in the CSV files that are available in the extracted reference data directory, you can import the code values in bulk. To import code values in bulk, run the `LoadReferenceData.py` Python script.

Due to licensing permission restrictions, Product 360 for Life Sciences also includes the following reference data sets for which there are no reference data values in the package:

- infap360ls_Comorbidity
- infap360ls_DiseasesSymptomProcedure
- infap360ls_DiseaseStatus
- infap360ls_InteractionEffect
- infap360ls_ProdClassCodeSystem
- infap360ls_StatusVal
- infap360ls_Substance

Use your internal resources to load reference data for the reference data sets that don't include reference data values.

Product 360 for Life Sciences includes reference data from sources, such as FHIR and SPOR-RMS with distribution licenses.

- To support EU-wide regulatory activities, Product 360 for Life Sciences uses the RMS data of the European Medicines Agency (EMA). The RMS data enables stakeholders in the European medicines regulatory network to uniquely identify medicinal products. For more information about SPOR-RMS, see SPOR-RMS.

  The extension uses reference data from SPOR-RMS with distribution licences. For more information about the distribution license for SPOR-RMS, see About RMS.
- To exchange electronic healthcare data, Product 360 for Life Sciences uses reference data from the FHIR standard resources for medicinal products. For more information on FHIR standard resources for medicinal products, see MedicinalProductDefinition.

  The extension uses reference data from FHIR with distribution licences. For more information about the distribution license for FHIR resources, see FHIR License and Legal Terms.

Prerequisites

Before you import reference data into your system, ensure that you meet the prerequisites.

Complete the following prerequisite tasks:

- Ensure that you have permission to import reference data.
- Install Python version 3 or later on your machine.
- To verify whether the cURL library files are pre-installed and to check the cURL library version, run the following command from a command prompt:
  ```
  curl --version
  ```
  Note: If cURL isn't available in your operating system, ensure that you install it. You can download the cURL library for your operating system from the cURL website:
  ```
  http://curl.haxx.se/download.html
  ```

Importing the reference data

To import all the reference data in bulk, run the Python script.

1. Open a command prompt, and navigate to the following directory:
   ```
   <Extracted extension package>/Reference Data
   ```
2. Run the following command:
   - On Windows.
     ```
     python LoadReferenceData.py --podHostName <POD host name>.informaticacloud.com --
     userName <user name> --password <password> --region <POD region>
     ```
   - On Linux.
     ```
     python3 LoadReferenceData.py --podHostName <POD host name>.informaticacloud.com --
     userName <user name> --password <password> --region <POD region>
     ```

   The jobs to import reference data code values run.
3. To monitor the status of a job, click **My Jobs** in Reference 360.

   The My Jobs page lists the job instances that are currently running, failed, and successfully completed.
