Preface

Follow the instructions in Securities 360 to deploy *Securities 360*.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing Securities 360

An industry 360 application is a ready-to-use package that you can use as a template for implementing MDM SaaS. With an industry 360 application, you can customize solutions to meet specific requirements and business initiatives of your industry. Use an industry 360 application to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Securities 360 is an industry 360 application that enhances the capabilities of MDM SaaS for the financial services sector. The application package includes predefined business entities, such as Bond and Equity, reference data assets, Data Quality and Data Integration assets, business process workflows, pages, and search result layout components.

You can leverage the Securities 360 master data to meet business goals, such as informed investment decisions, regulatory compliance, accurate reporting, and risk assessment and management. Use Securities 360 to manage bond and equity records for financial services.

With Securities 360, you can achieve the following goals:

Aggregate, enhance, and share master data

Aggregate and consolidate securities master data from market data providers, exchanges, custodians, and internal systems. You can enrich this data with inputs from external data providers and publish it to consuming systems, such as portfolio management, order management, and client and compliance reporting.

Ensure data quality and governance

Validate and cleanse key attributes, such as identifiers and classifications, manage data exceptions through workflows and multi-step change approval processes, and track the origin and lineage of financial master data.

Maintain single source of truth

Provide a centralized repository for the securities master data that is standardized, harmonized, and consistent.

Integrate securities market data

Integrate securities data from market data providers, such as Bloomberg and London Stock Exchange Group (LSEG), to enrich Securities 360 records with industry-standard securities data.

Guidelines for importing assets

Consider the following guidelines before you import the industry 360 application assets:

- Set up the prerequisite MDM SaaS business application.

- Import the industry 360 application assets before you customize the business entities. You can safely import multiple industry 360 application assets that use different business entities and in different MDM SaaS business applications. When you import the assets in an environment that already has an industry 360 application with the same business entities, the import fails.
- After you import the assets, consider them as your custom assets.
- Once you deploy an industry 360 application, upgrading to a newer version of the industry 360 application isn't supported.

Guidelines for migrating assets

Consider the following guidelines before you migrate the industry 360 application assets to another environment:

- To migrate the industry 360 application assets to higher environments, such as QA and production, export the assets from the development environment. Then, import them into the QA and production environments. For more information about migrating assets, see *Migrating projects and assets*.
- Don't import the industry 360 application assets again into a higher environment.

Prerequisites

Before you deploy Securities 360, perform the following prerequisites:

- Ensure that you have the license for the Integration Components for Business 360 and MDM SaaS edition.
- Ensure that you have the licenses required to manage connections, external data, and service rights.

  Note: The use of the industry 360 application doesn't confer any additional license or entitlement to license consumption beyond the terms specified in the applicable licensing agreements.
- Ensure that the version of the industry 360 application package matches the current MDM SaaS version where you import the industry 360 application assets.

  If the version of the industry 360 application package doesn't match the current MDM SaaS version, contact Informatica Global Customer Support to use the current version of the industry 360 application.

  To verify the MDM SaaS version, in Business 360 Console, click **About** in the IDMC Help menu and verify the build version.

  To verify the version of the industry 360 application, navigate to the readme.txt file in the extracted industry 360 application package.

CHAPTER 2

Securities 360 and market data providers integration

You can use predefined mapplets, a Data Integration asset, to integrate securities data from market data providers, such as Bloomberg and London Stock Exchange Group (LSEG), into Securities 360.

Use these mapplets to normalize complex data formats into a standard market data format and then transform the normalized data into the data model attributes of Securities 360.

Ingress data

You can import securities data from various market data providers into Securities 360 to enrich master records with industry-standard securities reference data.

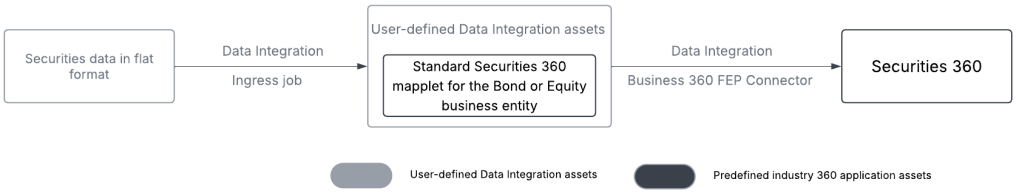

You can import securities data from external sources to your local server. For example, you can use FTP or SFTP servers to transfer the source files to your local server. After you import the source file, create the prerequisite assets and objects, such as source and target connections, taskflows, mapping tasks, and mappings, to ingress data. When you create a mapping, use the mapplets that are predefined Data Integration assets. The predefined mapplets automatically handle data type processing and format conversions for date, integer, decimal, and boolean data types. You can use Business 360 FEP Connector to write the transformed data into Securities 360.

The predefined Data Integration assets include the following mapplets:

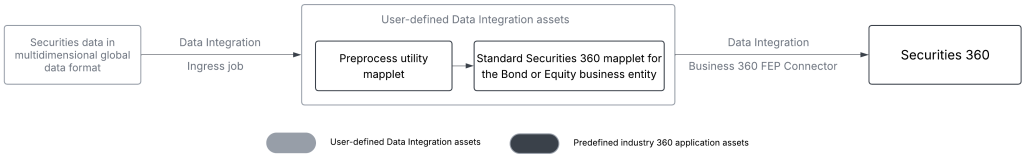

- Preprocess utility mapplet. A mapplet for the preprocess utility to parse and normalize multidimensional data into a tabular format.
- Standard Securities 360 mapplet for the Bond business entity. A mapplet that you can use to transform source file containing flat data into data model attributes of the Bond business entity.
- Standard Securities 360 mapplet for the Equity business entity. A mapplet that you can use to transform source file containing flat data into data model attributes of the Equity business entity.

You can integrate data from both flat and multidimensional data sources into Securities 360. For example, flat data can be CSV files containing end-of-day stock prices, and multidimensional data can be Bloomberg data grids with price, volume, and yield across multiple instruments and dates.

The following image shows the data flow from a flat data source into Securities 360:

The following image shows the data flow from a data source, such as Bloomberg Data License, containing multi-dimensional data in global data format into Securities 360:

For more information about the predefined mapplets, see “Mapplets” on page 34.

CHAPTER 3

Predefined Securities 360 assets

Securities 360 is available as an application package for installation on request.

The package includes the following predefined assets:

- Business entities
- Data quality rule associations
- Data Integration assets that contain mapplets
- Match models
- Reports
- Pages
- Search result layout components
- Relationship
- Reference data assets

Data model attributes

Securities 360 uses the Bond and Equity business entities to store information.

The Securities 360 package includes the following business entities:

- Bond. Stores information about a bond, such as bond rating, issuer classification, tax details, exchange information, identifiers, call and put provisions, and floating coupon terms.
- Equity. Stores information about an equity, such as exchange information, identifiers, dividend schedule, and initial public offering price and date.

The data model attributes provide metadata, such as business entities and field descriptions, to understand the data model of Securities 360.

Bond business entity model

Bond business entity stores information about a bond, such as bond rating, issuer classification, tax details, exchange information, identifiers, call and put provisions, and floating coupon terms. This business entity contains general fields and field groups.

General fields of the Bond business entity

The general fields store basic information about a bond, such as name, description, purpose, issue date, interest, and coupon details.

The following table lists the general fields that the Bond business entity contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Accrual End Date	X_infa360sm_accrualEndDate	Date	NA	NA	Date on which the accrual process for a bond ends.
Accrual Start Date	X_infa360sm_accrualStartDate	Date	NA	NA	Date from which the accrual process for a bond begins.
Accrued Interest	X_infa360sm_accruedInterest	Decimal	26,9	NA	Interest amount that is accumulated on a bond on the settlement date.
Bond Insurance	X_infa360sm_bondInsurance	Text	255	NA	Company that provides the insurance for a bond.
Bond Purpose	X_infa360sm_bondPurpose	Text	255	NA	Describes the specific purpose of a bond, such as water system improvement project, airport terminal construction, or affordable housing project. Bond purpose influences the analysis of a bond and may affect its tax status.
Bond Seniority Type	X_infa360sm_bondSeniorityType	Lookup	NA	infa360sm_seniorityType	Classification of a bond based on its repayment priority, such as secured, senior secured, or senior preferred.
Bond Sub-type	X_infa360sm_bondSub-Type	Lookup	NA	infa360sm_bondSubType	Sub type of issuer, such as corporate, government, or municipal, offering the bond.
Bond Type	X_infa360sm_bondType	Lookup	NA	infa360sm_instrumentBondType	Type of issuer, such as corporate, government, or municipal, offering the bond.
Callable Flag	X_infa360sm_callableFlag	Boolean	NA	NA	Indicates whether a bond is callable.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Call Type	X_infa360sm_callType	Lookup	NA	infa360sm_bondCallType	Type of a call schedule, such as Danish borrower call, equity claw- back call, and make-whole call.
CFI Code	X_infa360sm_cfiCode	Text	6	NA	Classification of Financial Instruments (CFI) code indicating the security classification under the ISO 10962 standard.
Conversion Currency	X_infa360sm_conversionCurrency	Lookup	NA	infa360sm_conversionCurrency	Currency used to calculate and execute the conversion of a bond into shares of the issuing company.
Conversion Type	X_infa360sm_conversionType	Text	255	NA	Type of a bond before and after the conversion, such as mandatory, voluntary, or reverse.
Convertible Flag	X_infa360sm_convertibleFlag	Boolean	NA	NA	Indicates whether a bond can be converted into equity shares of the issuing company.
Country	X_infa360sm_country	Lookup	NA	Country	Country where a bond is issued.
Country of Risk	X_infa360sm_countryOfRisk	Text	255	NA	Country where the issuer is domiciled for unsecured bonds or the country where the assets used as collateral are located for secured bonds.
Coupon Change Rate	X_infa360sm_couponChangeRate	Lookup	NA	infa360sm_bondCouponChangeRate	Frequency at which the coupon rate of a bond changes.
Coupon Currency	X_infa360sm_couponCurrency	Lookup	NA	infa360sm_currencyCode	Currency in which the scheduled coupon payments are made.
Coupon Payment Frequency	X_infa360sm_couponPaymentFrequency	Lookup	NA	infa360sm_bondCouponPaymentFrequency	Number of scheduled accrued interest payments made per year.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Coupon Type	X_infa360sm_couponType	Lookup	NA	infa360sm_bondCouponType	Type of coupon payment by which the bond issuer pays interest due on a bond to the bondholder, such as floating coupon, fixed coupon, and zero coupon.
Cumulative Flag	X_infa360sm_cumulativeFlag	Boolean	NA	NA	Indicates whether the paid coupon is accumulative in nature.
Currency	X_infa360sm_currency	Lookup	NA	infa360sm_currencyCode	Currency in which a bond is issued.
Day Count Basis	X_infa360sm_dayCountBasis	Lookup	NA	infa360sm_dayCountBasis	Interest calculation method based on which the Amount of accrued interest is determined.
Description	X_infa360sm_description	Text	255	NA	Short description about a bond.
Dual Currency Indicator	X_infa360sm_dualCurrencyIndicator	Boolean	NA	NA	Indicates whether a bond is denominated in one currency while coupon or principal payments are made in a different currency.
First Coupon Date	X_infa360sm_firstCouponDate	Date	NA	NA	Date on which the first coupon payment is made.
Fixed Coupon Rate	X_infa360sm_fixedCouponRate	Decimal	26,9	NA	Interest rate on a bond that is fixed for the entire duration of the bond.
Float Coupon Max Rate	X_infa360sm_floatCouponMaxRate	Decimal	22,5	NA	Maximum coupon rate to which a bond can be reset associated with the particular coupon effective date.
Float Coupon Min Rate	X_infa360sm_floatCouponMinRate	Decimal	22,5	NA	Minimum coupon rate to which a bond can be reset associated with the particular coupon effective date.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Floating Rate Benchmark Index	X_infa360sm_floatingRateBenchmarkIndex	Text	255	NA	A reference interest rate or index, such as LIBOR, SOFR, or EURIBOR,used to determine the variable interest payments on a floating rate bond.
Floating Rate Index Type	X_infa360sm_floatingRateIndexType	Text	255	NA	A category that identifies the specific benchmark index used to calculate the current floating interest rate, such as 1-month LIBOR or 3-month SOFR, for a bond.
Floating Rate Reset Frequency	X_infa360sm_floatingRateResetFrequency	Lookup	NA	infa360sm_floatingRateResetFrequency	Interval at which the interest rate of a floating bond is updated, such as quarterly, semiannually, or annually.
Floating Rate Spread	X_infa360sm_floatingRateSpread	Integer	22	NA	A fixed number of basis points (bps) added to a floating benchmark interest rate (such as LIBOR or SOFR) to determine the total interest rate payable on a floating rate bond.
Insurance Flag	X_infa360sm_insuranceFlag	Boolean	NA	NA	Indicates whether a bond is insured.
Issue Date	X_infa360sm_issueDate	Date	NA	NA	Date on which the bond was issued.
Issue Outlook Code	X_infa360sm_issueOutlookCode	Lookup	NA	infa360sm_outlookCode	Code of the outlook trend for a bond.
Issue Outlook Effective Date	X_infa360sm_issueOutlookEffectiveDate	Date	NA	NA	Start date of the period during which the future outlook or forecast is assessed for a bond.
Issue Outlook End Date	X_infa360sm_issueOutlookEndDate	Date	NA	NA	End date of the period during which the future outlook or forecast is assessed for a bond.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Issue Price	X_infa360sm_issuePrice	Decimal	22,5	NA	Price at which a bond was issued.
Issuer	X_infa360sm_issuer	Text	NA	NA	Name of the company that issued a bond.
Issue Size	X_infa360sm_issueSize	Decimal	22,5	NA	Total principal amount or face value of a bond offered to investors at the time of issuance.
Last Coupon Date	X_infa360sm_lastCouponDate	Date	NA	NA	Date on which the last coupon payment is made.
Lot Size	X_infa360sm_lotSize	Decimal	22,5	NA	Minimum denomination of a bond that can be traded.
Market Sector	X_infa360sm_marketSector	Text	25	NA	Classification code assigned by Bloomberg to categorize financial instruments into specific market sectors.
Maturity Date	X_infa360sm_maturityDate	Date	NA	NA	Date on which a bond matures.
Minimum Denomination	X_infa360sm_minimumDenomination	Decimal	22,5	NA	Smallest unit or amount of a bond that can be purchased or traded in the secondary market.
Name	X_infa360sm_name	Text	255	NA	Name of a bond.
Obligor Name	X_infa360sm_obligorName	Text	255	NA	Name of the entity that holds or guarantees the majority of the debt issued by the bond-issuing company.
OID Bond	X_infa360sm_oidBond	Boolean	NA	NA	Indicates whether a bond is an original issue discount.
Putable Flag	X_infa360sm_putableFlag	Boolean	NA	NA	Indicates whether a bond is putable.
Regulation S Indicator	X_infa360sm_regulationSIndicator	Boolean	NA	NA	Indicates whether a bond is registered for the Regulation S rule.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Sink Additional Payment Percent	X_infa360sm_sinkAdditionalPaymentPercent	Decimal	22,5	NA	Maximum annual percentage permitted to be retired by the sinking fund.
Sink Additional Payment	X_infa360sm_sinkAdditionalPayment	Lookup	NA	infa360sm_bondSinkAdditionalPayment	Type of sink additional payment a bond has, such as allowed with cumulative option or allowed without cumulative option.
Sink Allocation Code	X_infa360sm_sinkAllocationCode	Lookup	NA	infa360sm_bondSinkAllocationCode	Type of sink allocation a bond has, such as depository, entire issue, or holder's option.
Sink Code	X_infa360sm_sinkCode	Lookup	NA	infa360sm_bondSinkCode	Type of sinking fund a bond has, such as regular, optional, mandatory, and accelerated.
Sinking Fund Indicator	X_infa360sm_sinkingFundIndicator	Boolean	NA	NA	Indicates whether a bond is associated with a sinking fund.
State Code	X_infa360sm_stateCode	Text	255	NA	State code associated with the issuer of a bond.
Status	X_infa360sm_instrumentStatus	Lookup	NA	infa360sm_bondStatus	Status of a bond, such as active or inactive.
Step Up Down Indicator	X_infa360sm_stepUpDownIndicator	Boolean	NA	NA	Indicates whether a bond is a step up or step down bond.
Trace Eligible Indicator	X_infa360sm_traceEligibleIndicator	Boolean	NA	NA	Indicates whether a bond is eligible for TRACE, the NASDAQ Fixed Income Pricing System.
When Issue Indicator	X_infa360sm_whenIssueIndicator	Boolean	NA	NA	Indicates whether a bond is authorized but doesn't have a firm settlement.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Yield at Maturity	X_infa360sm_yieldAtMaturity	Decimal	26,9	NA	Expected returns percentage when a bond matures.
144A Indicator	X_infa360sm_144AIndicator	Boolean	NA	NA	Indicates whether a bond issue is subject to Rule 144A restrictions.

Identifier field group of the Bond business entity

The Identifier field group stores information about an identifier of a bond, such as identifier type, source, start date, and end date.

The following table lists the fields that the Identifier field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Effective End Date	X_infa360sm_effectiveEndDate	Date	NA	NA	Expiry date of an identifier.
Effective Start Date	X_infa360sm_effectiveStartDate	Date	NA	NA	Start date from when an identifier is active.
Identifier source	X_infa360sm_identifierSource	Text	255	NA	Authority that has issued the identifier to a bond.
Identifier Type	X_infa360sm_identifierType	Lookup	NA	infa360sm_identifierType	Unique identifier for a bond, such as ISIN, CUSIP, SEDOL, or an alternate identifier.
Identifier Value	X_infa360sm_identifierValue	Text	40	NA	Value of an identifier.

Floating Coupons field group of the Bond business entity

The Floating Coupons field group stores information about a floating coupon of a bond, such as coupon rate and coupon rate effective date.

The following table lists the fields that the Floating Coupon field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Coupon Rate	X_infa360sm_couponRate	Decimal	22,5	NA	Annual interest rate for a bond expressed as a percentage of face value.
Coupon Rate Effective Date	X_infa360sm_couponRateEffectiveDate	Date	NA	NA	Date on which interest begins accruing at a specified rate.

Call Provision field group of the Bond business entity

The Call Provision field group stores information about the call provision of a bond, such as call price, call effective Date, and call end Date.

The following table lists the fields that the Call Provision field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Call Effective Date	X_infa360sm_callEffectiveDate	Date	NA	NA	First date on which the issuer can start redeeming a bond before its maturity.
Call End Date	X_infa360sm_callEndDate	Date	NA	NA	Last date on which the issuer can start redeeming a bond before its maturity.
Call Price	X_infa360sm_callPrice	Decimal	22,5	NA	Price at which a bond can be redeemed early by the issuer, usually specified as a percentage of the face value of a bond.

Put Provision field group of the Bond business entity

The Put Provision field group stores information about the put provision of a bond, such as put price, put effective date, and put end date.

The following table lists the fields that the Put Provision field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Put Effective Date	X_infa360sm_putEffectiveDate	Date	NA	NA	First date from when the bondholder can start selling a bond back to the issuer at an agreed price.
Put End Date	X_infa360sm_putEndDate	Date	NA	NA	Last date on which the bondholder can sell a bond back to the issuer at an agreed price.
Put Price	X_infa360sm_putPrice	Decimal	22,5	NA	Price at which the bondholder can sell a bond back to the issuer when exercising the put option, usually set at a specific amount or percentage of the face value of a bond.

Rating field group of the Bond business entity

The Rating field group stores information about the rating of a bond, such as provider, rating, short term issue credit rating, long term issue credit rating, credit watch, and credit watch rank.

The following table lists the fields that the Rating field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Credit Watch	X_infa360sm_CreditWatch	Text	20	NA	Code indicating that a rating is under review for possible change in the short-term as defined by rating provider's watchlist.
Credit Watch Date	X_infa360sm_CreditWatchDate	Date	NA	NA	Date on which the Credit Watch value became effective.
Credit Watch Rank	X_infa360sm_CreditWatchRank	Integer	16	NA	Code indicating the rating provider's Credit Watch Rank
Long Term Issue Credit Rating	X_infa360sm_LongTermIssueCreditRating	Text	30	NA	An evaluation of the ability of a bond issuer to repay debts maturing after more than one year.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Rating	X_infa360sm_Rating	Text	30	NA	Credit-worthiness of a bond issuer.
Rating Date	X_infa360sm_RatingDate	Date	NA	NA	Date on which a credit rating was assigned or updated for a bond.
Rating Preliminary Flag	X_infa360sm_RatingPreliminaryFlag	Boolean	NA	NA	Indicates whether the credit rating is preliminary.
Rating Provider	X_infa360sm_RatingProvider	Lookup	NA	infa360sm_instrumentRatingProvider	Organization or agency, such as S&P Global Ratings, Fitch Ratings, or DBR Moriningstar, that evaluates and assigns credit ratings for bonds.
Rating Unsolicited Flag	X_infa360sm_RatingUnsolicitedFlag	Boolean	NA	NA	Indicates whether the rating is unsolicited.
Short Term Issue Credit Rating	X_infa360sm_ShortTermIssueCreditRating	Text	30	NA	An assessment of the credit quality of an bond issuer for debt obligations typically maturing within a year.

Sink Provisions field group of the Bond business entity

The Sink Provisions field group stores information about the sink provision of a bond, such as sink date, sink amount, and sink price.

The following table lists the fields that the Sink Provisions field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Sink Amount	X_infa360sm_sinkAmount	Decimal	22,5	NA	Base amount that can be redeemed on the redemption date.
Sink Amount Unit	X_infa360sm_sinkAmountUnit	Lookup	NA	infa360sm_bondSinkAmountUnit	Units in which the sink amount is stated.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Sink Date	X_infa360sm_sinkDate	Date	NA	NA	Date on which redemption of a bond occurs.
Sink Defeased Flag	X_infa360sm_sinkDefeasedFlag	Boolean	NA	NA	Indicates whether the sinking fund is defeased.
Sink Price	X_infa360sm_sinkPrice	Decimal	22,5	NA	Price at which the issuer can redeem or purchase a portion of the bond principal under sinking fund provisions of a bond.

Bond Exchange field group of the Bond business entity

The Bond Exchange field group stores information about the bond exchange of a bond, such as bond exchange name, exchange country code, and market identifier code.

The following table lists the fields that the Bond Exchange field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Exchange	X_infa360sm_exchange	Text	255	NA	Bond exchange on which a bond is listed.
Exchange Country Code	X_infa360sm_exchangeCountryCode	Lookup	NA	Country	Country in which a bond exchange exists.
IsPrimary Exchange	X_infa360sm_isprimaryExchange	Boolean	NA	NA	Indicates whether the exchange is a primary exchange for a bond.
MIC	X_infa360sm_mic	Text	4	NA	Unique and standardized alphanumeric code assigned by ISO under the ISO 10383 standard.

Issuer Classification field group of the Bond business entity

The Issuer Classification field group stores information about the classification of a bond issuer, such as classification type and code.

The following table lists the fields that the Issuer Classification field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Classification Type	X_infa360sm_classificationType	Lookup	NA	infa360sm_classificationType	Type of classification system, such as NAICS, SIC, GICS, NACE, that groups legal entities.
Level1 Label	X_infa360sm_level1Label	Lookup	NA	infa360sm_classificationlevel1Label	Hierarchical classification that indicates the sector to which a legal entity belongs.
Level1	X_infa360sm_level1	Lookup	NA	infa360sm_classificationlevel1	Code value that indicates the sector to which a legal entity belongs.
Level2 Label	X_infa360sm_level2Label	Lookup	NA	infa360sm_classificationlevel2Label	Hierarchical classification that indicates the industry group to which a legal entity belongs.
Level2	X_infa360sm_level2	Lookup	NA	infa360sm_classificationlevel2	Code value that indicates the industry group to which a legal entity belongs.
Level3 Label	X_infa360sm_level3Label	Lookup	NA	infa360sm_classificationlevel3Label	Hierarchical classification that indicates the industry to which a legal entity belongs.
Level3	X_infa360sm_level3	Lookup	NA	infa360sm_classificationlevel3	Code value that indicates the industry to which a legal entity belongs.
Level4 Label	X_infa360sm_level4Label	Lookup	NA	infa360sm_classificationlevel4Label	Hierarchical classification that indicates the sub-industry to which a legal entity belongs.
Level4	X_infa360sm_level4	Lookup	NA	infa360sm_classificationlevel4	Code value that indicates the sub-industry to which a legal entity belongs.

Conversion field group of the Bond business entity

The Conversion field group stores information about the convertible features of a bond, such as conversion price, conversion ratio, conversion security identifier, and conversion security code.

The following table lists the fields that the Conversion field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Conversion Price	X_infa360sm_conversionPrice	Decimal	26,9	NA	A predetermined price at which a bond can be converted into the company's shares.
Conversion Price Type	X_infa360sm_conversionPriceType	Lookup	NA	infa360sm_conversionPriceType	Type of conversion price, such as fixed price or market price, used to determine the price at which a convertible bond can be exchanged into shares.
Conversion Ratio	X_infa360sm_conversionRatio	Decimal	26,9	NA	Number of shares a bond holder receives for each bond converted.
Conversion Security Code	X_infa360sm_conversionSecurityCode	Text	4	NA	Code representing the shares that the convertible bond can be exchanged for.
Conversion Security Identifier	X_infa360sm_conversionSecurityIdentifier	Text	255	NA	Unique code or identifier for a security into which the bond can be converted, often tied to the company shares.
Conversion Terms Expiration Date	X_infa360sm_conversionTermsExpirationDate	Date	NA	NA	Date on which the option to convert a bond into equity expires.
Conversion Terms Start Date	X_infa360sm_conversionTermsStartDate	Date	NA	NA	Date from when a bondholder can begin exercising their conversion option.

Tax Detail field group of the Bond business entity

The Tax Detail field group stores tax information of a bond, such as code and value.

The following table lists the fields that the Tax Detail field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Code	X_infa360sm_code	Lookup	NA	infa360sm_bondTaxRule	Laws and regulations that govern the taxation of a bond income, such as EU savings tax indicator, state tax, US federal tax, or US alternative minimum tax.
Value	X_infa360sm_value	Lookup	NA	infa360sm_bond_TaxValue	Select whether the tax regime rule is applicable for a bond.

Step Interest field group of the Bond business entity

The Step Interest field group stores information about the step interest of a bond, such as step interest rate and pay date.

The following table lists the fields that the Step Interest field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Interest Rate	X_infa360sm_interestRate	Decimal	22,5	NA	Rate of interest paid for a bond.
Interest Date	X_infa360sm_interestDate	Date	NA	NA	Date on which the interest will be paid for a bond.

Equity business entity model

Equity business entity stores information about an equity, such as exchange information, identifiers, dividend schedule, and initial public offering price and date. This business entity contains general fields and field groups.

General fields of the Equity business entity

The general fields store basic information about an equity, such as equity name, issuer, issuer classification, dividend schedule, lot size, market capitalization, market identifier code, and ticker symbol.

The following table lists the general fields that the Equity business entity contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
52 Week High	X_infa360sm_52WeekHigh	Integer	22	NA	Highest price at which an equity has traded during the past 52 weeks, represented in the default currency of the equity.
52 Week Low	X_infa360sm_52WeekLow	Integer	22	NA	Lowest price at which an equity has traded during the past 52 weeks, represented in the default currency of the equity.
Annualized Dividend Adjusted Gross Amount	X_infa360sm_annualizedDividendAdjustedGrossAmount	Decimal	22,5	NA	Total gross return per share on an equity, expressed on an annual basis, including both interim and additional dividends paid.
CFI Code	X_infa360sm_cfiCode	Text	6	NA	Classification of Financial Instruments (CFI) code indicating the equity classification under the ISO 10962 standard.
Country of Issue	X_infa360sm_country	Lookup	NA	Country	Country where an equity is issued.
Currency	X_infa360sm_currency	Lookup	NA	infa360sm_currencyCode	Currency in which an equity is traded.
Dividend Currency	X_infa360sm_dividendCurrency	Lookup		infa360sm_currencyCode	Currency in which a dividend is issued for an equity.
Dividend Frequency	X_infa360sm_dividendFrequency	Lookup	NA	infa360sm_equityDividendFrequency	Regular interval when a dividend is distribution for an equity.
Dividend Yield	X_infa360sm_dividendYield	Decimal	34,9	NA	Annual dividend income an investor can expect to receive from an equity relative to its current market price.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Earnings per share	X_infa360sm_earningsPerShare	Decimal	22,5	NA	Amount of profit a company generates for each outstanding share of its stock.
Equity Initial Public Offer Date	X_infa360sm_equityInitialPublicOfferDate	Date	NA	NA	Date when an initial public offering (IPO) of an equity was issued.
Equity Initial Public Offer Share Price	X_infa360sm_equityInitialPublicOfferSharePrice	Double	NA	NA	Price at which an initial public offering (IPO) of an equity was issued.
Equity Logo	X_infa360sm_equityLogo	Text	4000	NA	URL of the logo or visual symbol that represents the equity or its issuer
Equity Name	X_infa360sm_equityName	Text	255	NA	Official or trading name of an equity stock.
Equity Type	X_infa360sm_equityType	Lookup	NA	infa360sm_instrumentEquityType	Type of an equity, such as ordinary share, preference share, or units.
Exchange	X_infa360sm_exchange	Text	255	NA	Stock exchange on which an equity is listed.
Exchange Country Code	X_infa360sm_exchangeCountryCode	Lookup	NA	Country	Country where the equity issuer exchange is located.
Issue Currency	X_infa360sm_issueCurrency	Lookup	NA	infa360sm_currencyCode	Currency in which an equity is offered.
Issue Date	X_infa360sm_issueDate	Date	NA	NA	Date when an equity was issued.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Issue Price	X_infa360sm_issuePrice	Decimal	22,5	NA	Price at which an equity was issued on the issue date.
Issuer	X_infa360sm_issuer	Text	255	NA	Name of the issuer of an equity.
Last Close Date	X_infa360sm_lastCloseDate	Date	NA	NA	Date on which the trading of an equity officially ended for a particular trading session.
Last Close Price	X_infa360sm_lastClosePrice	Text	NA	NA	Price at which the equity last traded during the previous market close.
Lot Size	X_infa360sm_lotSize	Decimal	22,5	NA	Minimum denomination or number of shares of an equity that can be traded in a single transaction.
Market Capitalization	X_infa360sm_marketCapitalization	Text	NA	NA	Total market value of all the outstanding shares of equity stocks of a company.
MIC	X_infa360sm_mic	Text	4	NA	An ISO 10383 standard code that uniquely identifies a stock exchange or market.
Price Earnings Ratio	X_infa360sm_priceEarningsRatioTtm	Decimal	22,5	NA	Ratio of equity price to earnings per share.
Ticker	X_infa360sm_ticker	Text	50	NA	Unique identifier of a publicly traded company on a stock exchange.
Voting rights per share	X_infa360sm_votingRightsPerShare	Decimal	22,5	NA	Number of votes for each share of a class at a company meeting.

Issuer Classification field group of the Equity business entity

The Issuer Classification field group stores information about the classification of an equity issuer, such as classification type and code.

The following table lists the fields that the Issuer Classification field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Classification Type	X_infa360sm_classificationType	Lookup	NA	infa360sm_classificationType	Type of classification system, such as NAICS, SIC, GICS, NACE, that groups legal entities.
Level1 Label	X_infa360sm_level1Label	Lookup	NA	infa360sm_classificationlevel1Label	Hierarchical classification that indicates the sector to which a legal entity belongs.
Level1	X_infa360sm_level1	Lookup	NA	infa360sm_classificationlevel1	Code value that indicates the sector to which a legal entity belongs.
Level2 Label	X_infa360sm_level2Label	Lookup	NA	infa360sm_classificationlevel2Label	Hierarchical classification that indicates the industry group to which a legal entity belongs.
Level2	X_infa360sm_level2	Lookup	NA	infa360sm_classificationlevel2	Code value that indicates the industry group to which a legal entity belongs.
Level3 Label	X_infa360sm_level3Label	Lookup	NA	infa360sm_classificationlevel3Label	Hierarchical classification that indicates the industry to which a legal entity belongs.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Level3	X_infa360sm_level3	Lookup	NA	infa360sm_classificationlevel3	Code value that indicates the industry to which a legal entity belongs.
Level4 Label	X_infa360sm_level4Label	Lookup	NA	infa360sm_classificationlevel4Label	Hierarchical classification that indicates the sub-industry to which a legal entity belongs.
Level4	X_infa360sm_level4	Lookup	NA	infa360sm_classificationlevel4	Code value that indicates the sub-industry to which a legal entity belongs.

Identifier field group of the Equity business entity

The Identifier field group stores information about an identifier of an equity, such as identifier type, source, start date, and end date.

The following table lists the fields that the Identifier field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Effective End Date	X_infa360sm_effectiveEndDate	Date	NA	NA	Expiry date of an identifier.
Effective Start Date	X_infa360sm_effectiveStartDate	Date	NA	NA	Start date from when an identifier is active.
Identifier source	X_infa360sm_identifierSource	Text	255	NA	Authority that has issued the identifier to an equity.

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Identifier Type	X_infa360sm_identifierType	Lookup	NA	infa360sm_identifierType	Unique identifier for an equity, such as ISIN, CUSIP, SEDOL, or an alternate identifier.
Identifier Value	X_infa360sm_identifierValue	Text	40	NA	Value of an identifier.

Share Amount field group of the Equity business entity

The Share Amount field group stores information about an share amount of an equity, such as share amount and type.

The following table lists the fields that the Share Amount field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Shares Amount	X_infa360sm_sharesAmount	Integer	24	NA	Number of shares of a particular equity currently held by the share amount type.
Shares Amount Type	X_infa360sm_sharesAmountType	Text	50	NA	Code indicating the share amount type, such as OUT, ISS, LIS, TRE, FFL, CLH, AUT or UNC.

Dividend Schedule field group of the Equity business entity

The Dividend Schedule field group stores information about a dividend schedule of an equity, such as dividend record date, declared date, payment type, payment date, and dividend per share.

The following table lists the fields that the Dividend Schedule field group contains:

Display Name	Internal ID	Field Type	Length	Reference Data	Description
Dividend Declared Date	X_infa360sm_dividendDeclaredDate	Date	NA	NA	Date on which the dividend for a bond was declared by the board.
Dividend Ex Date	X_infa360sm_dividendExDate	Date	NA	NA	Date on which the bond starts trading ex-dividend.
Dividend Payment Date	X_infa360sm_dividendPaymentDate	Date	NA	NA	Date on which the bond dividend payments are made.
Dividend Payment Type	X_infa360sm_dividendPaymentType	Lookup	NA	infa360sm_equityDividendPaymentType	Type of dividend payment for a bond, such as cash, cash and stock, or cash dividend.
Dividend Per Share	X_infa360sm_dividendPerShare	Decimal	34,10	NA	Amount of dividend paid per bond share.
Dividend Record Date	X_infa360sm_dividendRecordDate	Date	NA	NA	Date by which one must be on the books as a shareholder of a bond to receive the dividend.

Data quality rule associations

Add predefined data quality rule associations to the business entity fields to cleanse, standardize, and validate the field values. When you import source records, the data quality rule associations validate and transform the records in Securities 360.

The following table describes the advanced rule associations that Securities 360 uses:

Rule Association Name	Rule Specification Name	Applied Field	Description
Identifier Validation	Identifier Validation	Identifier.Identifier Value	Validates whether the identifier value has a valid format.

Securities 360 includes rule specification for identifier types, such as ISIN, CUSIP, and SEDOL ID. Based on the identifier type, you can apply the rule specification. The rule specification validates whether the identifier value has a valid format.

Rule specification assets

A rule specification is a data quality asset that represents the data requirements of a business rule in logical form. Securities 360 uses rule specifications to define the conditions that the input data must satisfy. Also, the rule specifications define the actions to take when input values satisfy the conditions.

The following table lists the rule logic and their regular expression descriptions:

Rule Specification Name	Description
CUSIP Checkdigit	Validates the format of a Committee on Uniform Securities Identification Procedures (CUSIP) ID. This rule uses `rs_cusip_checkdigit`, a check digit logic, internally. The rule validates the values based on the following conditions: - Length of the input is 9. - First 8 characters are alphanumeric. - Character 9 is numeric.
ISIN Checkdigit	Validates the format of an International Securities Identification Number (ISIN). This rule uses `rs_isin_checksum`, a check digit logic, internally. The rule validates the values based on the following conditions: - Length of the input is 12. - First 2 characters are alphabets. - Characters 3 to 11 are alphanumeric. - Character 12 is numeric.
SEDOL Checkdigit	Validates the format of a Stock Exchange Daily Official List (SEDOL) ID. This rule uses `rs_sedol_checkdigit`, a check digit logic, internally. The rule validates the values based on the following conditions: - Length of the input is 7. - First 6 characters are alphanumeric. - Character 7 is numeric.

Mapplets

Use the predefined mapplets, a Data Integration asset, to integrate securities data from market data providers into Securities 360.

The following table describes the predefined mapplets that Securities 360 includes:

Mapplet Name	Internal ID	Description
infa360sec_mplt_multidim_preprocess_utility	infa360sec_mplt_multidim_preprocess_utility	A preprocess utility mapplet to parse and normalize multidimensional securities data in global data format into a standard market data format using Java transformation. Use this mapplet to transform a source file containing multidimensional data from a market data provider, such as Bloomberg Data License.
infa360sec_mplt_Bond_Common_Format	infa360sec_mplt_Bond_Common_Format	A standard Securities 360 mapplet that transforms flat data from a source file into the data model attributes of the Bond business entity.
infa360sec_mplt_Equity_Common_Format	infa360sec_mplt_Equity_Common_Format	A standard Securities 360 mapplet that transforms flat data from a source file into the data model attributes of the Equity business entity.

Match Model

A match model determines how your data is matched. You can use the predefined match model to identify and resolve duplicate records.

Securities 360 includes the predefined match model, Baseline Match Model for Bond, to match and merge duplicate bond records.

The following table describes the match model properties for the Bond business entity:

Declarative Rule Rank	Match Objective	Match Strategy	Match Fields	Description
1	Resolve Duplicate	Exact	Exact match fields: - X_infa360sm_Identifier > X_infa360sm_IdentifierType - X_infa360sm_Identifier > X_infa360sm_IdentifierValue	Identifies exactly matching bond records based on their identifiers.
-	Resolve Duplicates	Fuzzy	Exact match fields: - X_infa360sm_country - X_infa360sm_couponType - X_infa360sm_issueDate - X_infa360sm_currency - X_infa360sm_maturityDate Fuzzy match field: X_infa360sm_name	Identifies similar bond records based on exactly matching value of country, coupon type, issue date, currency, and maturity date, and similar organization name.

Reports

Use the predefined reports to help you visualize data in the form of charts and report tables in MDM SaaS.

The following table describes the predefined reports for Securities 360:

Report Name	Internal ID	Description
Bond by Bond Type	bond_by_bond_type	Displays the number of bond records based on the type of a bond.
Bond by Country	bond_by_country	Displays the number of bond records based on the country where a bond is issued.
Bond by Seniority Type	bond_by_seniority_type	Displays the number of bond records based on the type of seniority of a bond.
Equity by Equity Type	equity_by_equity_type	Displays the number of equity records based on the type of an equity.
Equity by Country of Issue	equity_by_country_of_issue	Displays the number of equity records based on the country where an equity is issued.

Pages

The application package contains predefined pages. You can use the predefined pages as a reference to create similar custom pages for business entities. Use the Create page type to create records. Use the View and Edit page type to view and edit records.

The following table describes the predefined pages for the Bond and Equity business entities:

Page Name	Description	Custom User Roles
Create Page for Bond	A page to create a bond record.	- Securities 360 Investment Analyst - Securities 360 Data Steward - Securities 360 Operations Manager - Securities 360 Compliance Manager - Securities 360 Business Data Owner
Create Page for Equity	A page to create an equity record.	- Securities 360 Investment Analyst - Securities 360 Data Steward - Securities 360 Operations Manager - Securities 360 Compliance Manager - Securities 360 Business Data Owner
Edit Page for Bond	A page to view or edit a bond record.	- Securities 360 Investment Analyst - Securities 360 Data Steward - Securities 360 Operations Manager - Securities 360 Compliance Manager - Securities 360 Business Data Owner
Edit Page for Equity	A page to view or edit an equity record.	- Securities 360 Investment Analyst - Securities 360 Data Steward - Securities 360 Operations Manager - Securities 360 Compliance Manager - Securities 360 Business Data Owner

Note: Ensure that users with custom roles are assigned the Business 360 Process Executor and MDM Business User roles to perform tasks in the Business 360 Console and MDM SaaS business applications.

For more information about creating pages, see *Designing the user interface*.

Search result layout components

The application package contains predefined search result layout components.

The following table describes the search result layout components for the Bond and Equity business entities:

Search Result Layout Component Name	Description	Assigned User Roles
Search Layout Bond	Search layout to display search results of the Bond records.	- Securities 360 Investment Analyst - Securities 360 Data Steward - Securities 360 Operations Manager - Securities 360 Compliance Manager - Securities 360 Business Data Owner
Search Layout Equity	Search layout to display search results of the Equity records.	- Securities 360 Investment Analyst - Securities 360 Data Steward - Securities 360 Operations Manager - Securities 360 Compliance Manager - Securities 360 Business Data Owner

For more information about creating pages, see *Design the User Interface*.

Relationship

The application package includes predefined relationship between the business entities.

You can use predefined relationship between predefined business entities that are included in Securities 360.

The following table describes the predefined relationship that Securities 360 includes:

Relationship Name	Internal ID	Business Entity 1	Business Entity 2	Direction
Conversion Relationship	sm_bond_to_sm_equity	Bond	Equity	Bond → Equity

Business process workflow

You can use the business process workflow to streamline processes that involve multiple predefined user roles.

Securities 360 includes sample workflows that orchestrate the approval processes for creating and updating bond and equity records.

The application also includes predefined business events to trigger the sample workflow when users create or update a bond or equity record. Based on your business requirements, use different workflows for different bond or equity properties.

Predefined Securities 360 user roles

Securities 360 includes multiple custom user roles to create, update, and review bond and equity records.

The following table describes the custom user roles that Securities 360 includes:

Role Name	Description
Securities 360 Investment Analyst	Role for viewing and updating the securities records that go through the approval process.
Securities 360 Data Steward	Role for creating, reviewing, and updating the securities records.
Securities 360 Operations Manager	Role for updating and reviewing the securities records that the data steward approves.
Securities 360 Compliance Manager	Role for reviewing the securities records that the operations manager approves.
Securities 360 Business Data Owner	Role for reviewing the securities records that the compliance manager approves.

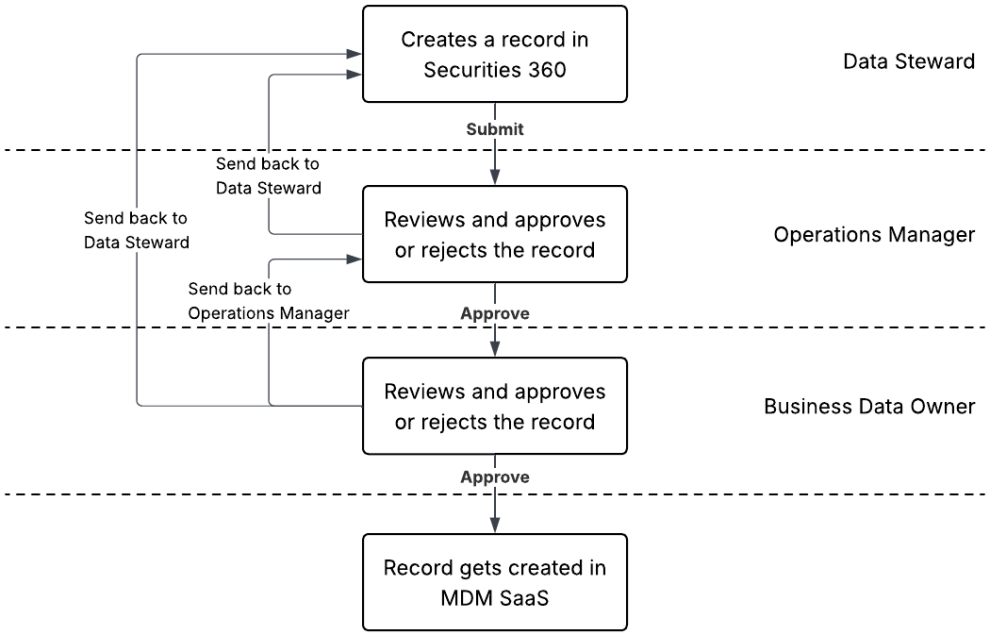

Note: Ensure that users with custom roles are assigned the Business 360 Process Executor and MDM Business User roles to perform tasks in the Business 360 Console and MDM SaaS business applications.

Sample workflow to create a record in Securities 360

Securities 360 includes a sample workflow to create a record in Securities 360.

When a data steward creates a record, the record is sent to an operations manager for reviewing the record data. If the operations manager finds that the record information is incorrect or inadequate, the operations manager can send the record back to the data steward. If the operations manager approves the record, the record is sent to the business data owner. After the business data owner approves the record, the record is created and is active in MDM SaaS.

The following image shows the approval process that the sample workflow uses:

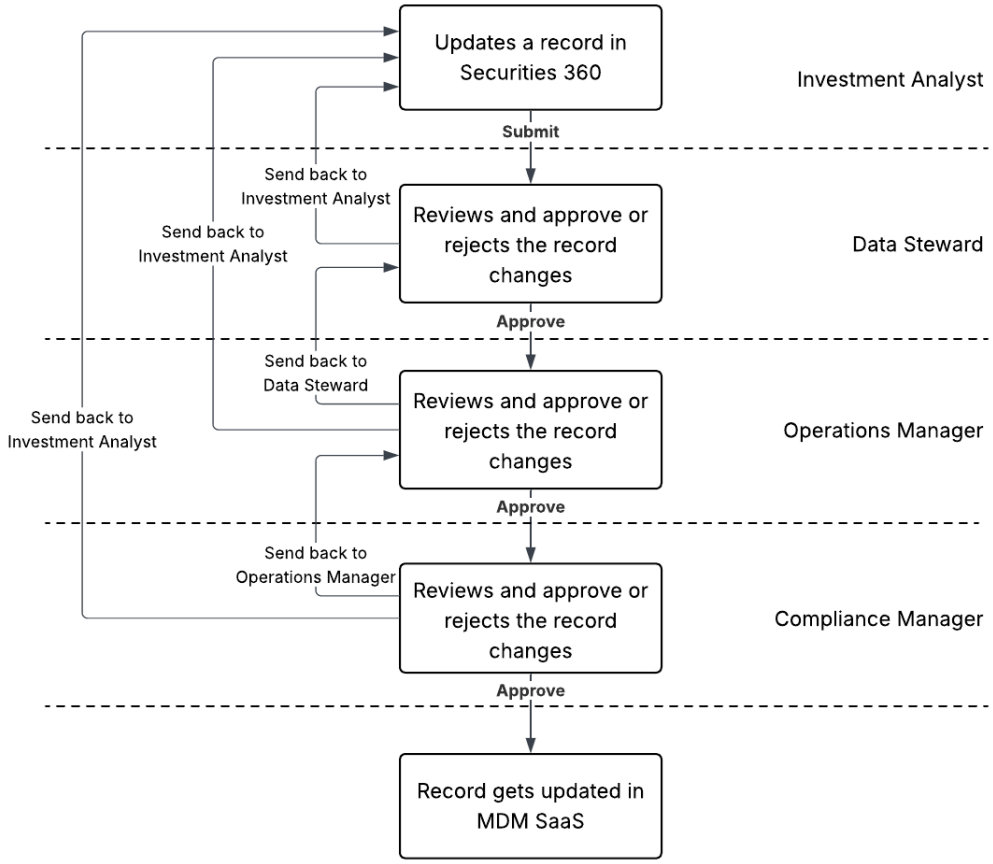

Sample workflow to update a record in Securities 360

Securities 360 includes a sample workflow to update a record in Securities 360.

When an investment analyst updates a record, the record is sent to a data steward for reviewing the record data. If the data steward finds that the record information is incorrect or inadequate, they can send the record back to the investment analyst. If the data steward approves the record, the record is sent to the operations manager. If the operations manager finds that the record information is incorrect or inadequate, they can send the record back to the data steward or investment analyst. If the operation manager approves the record, the record is sent to the compliance manager. After the compliance manager approves the record, the record is created and is active in MDM SaaS.

The following image shows the approval process that the sample workflow uses:

Updates a record in Securities 360
Investment Analyst
Submit
Send back to Investment Analyst
Send back to Investment Analyst
Reviews and approve or rejects the record changes
Data Steward
Approve
Send back to Data Steward
Send back to Investment Analyst
Reviews and approve or rejects the record changes
Operations Manager
Approve
Send back to Operations Manager
Reviews and approve or rejects the record changes
Compliance Manager
Approve
Record gets updated in MDM SaaS

CHAPTER 4

Deploying Securities 360

When you import the application assets, the predefined assets are configured to use Multidomain MDM SaaS as the business application. You can also configure other business applications to use the application assets.

To deploy Securities 360, perform the following tasks:

1. Download and extract the application package.
2. Import the authorization assets.
3. Import the predefined data model, pages, and search result layout components.
4. Add predefined pages and search result layout components.
5. Import the predefined reports.
6. Import reference data code values into reference data assets.
7. Import the Application Integration assets.
8. Publish the Application Integration processes.
9. Import the Data Integration assets.

Note: To import the authorization assets and predefined reports, ensure that you log in with the Admin user role.

To import the data model, pages, search result layout components, and reference data assets ensure that you log in with MDM Designer and Designer user roles.

Downloading and extracting the Securities 360 package

To get the Securities 360 package, contact Informatica Global Customer Support.

After you download the Securities 360 package, extract the package on your computer. The package contains the data model attributes, pages, search result layout components, reports, relationship, Application Integration and Data Integration assets, and reference data for Securities 360.

The extracted package contains the following files and folders:

File or Folder Name	Description
`0_Authorization_Assets(Admin Only).zip`	Contains the privileges configured for different user roles.
`1_MDM_Assets.zip`	Contains the following predefined assets: - Data model attributes. - Data quality rule associations. - Match Models. - Pages - Relationship - Search result layout components.
`2_Multidomain_Reports(Admin Only).zip`	Contains predefined reports for Securities 360.
`3_CAI_Assets.zip`	Contains the Application Integration assets.
`4_DI_Assets.zip`	Contains the Data Integration assets.
`Reference Data`	Contains files that store code lists and values that the business entities uses.

Importing the authorization assets

Import the authorization assets that contain the privileges configured for different user roles.

To import the authorization assets, ensure that you belong to the Admin user role.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   `<Extracted extension package>/0_Authorization_Assets(Admin Only).zip`
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected.
5. In the **Review Locations** section, select the target project to which you want to import the assets.

   Multidomain project is selected by default.
6. Click **Import**.
7. On the **My Import/Export Logs** page, verify whether the import job is successful.
8. In Administrator, select **User Roles**.
9. Verify whether the following user roles are available:
   - Securities 360 Investment Analyst
   - Securities 360 Data Steward
   - Securities 360 Operations Manager
   - Securities 360 Compliance Manager

- Securities 360 Business Data Owner

Importing data model, pages, and search result layout components

After you download and extract the application package, import the data model assets, predefined pages, and search result layout components.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   `<Extracted extension package>/1_MDM_Assets.zip`
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected and click **Test**.

   In the **Select Assets** section, you can see the potential outcome of import for each asset.
5. Click **Import**.
6. On the **My Import/Export Logs** page, verify whether the import job is successful.

Adding predefined pages and search result layout components

You can add the predefined pages and search result layout components of the Bond and Equity business entities to MDM SaaS. Ensure that you have the Admin user role.

1. In Business 360 Console, click **Explore** > **Import**.
2. Click the business application.
3. On the **Pages** tab, select **Bond**.
4. On the **Create** tab, click **Add Page**.

   A blank row appears.
5. To select a page, click the asset picker.
6. On the **Select a page** window, select **Create Page for Bond**, and click **Select**.

   The selected page appears in the row.
7. To assign user roles to the page, from the list of user roles, select one or more user roles.

   For more information about the user roles assigned to pages, see "Pages" on page 36.
8. On the **View and Edit** tab, click **Add Page**.

   A blank row appears.
9. To select a page, click the asset picker.
10. On the **Select a page** window, select **Edit Page for Bond**, and assign the page to one or more user roles.

For more information about the user roles assigned to pages, see "Pages" on page 36.

11. In the left pane, select the Equity business entity, and repeat steps 4 through 10.

    Note: Select **Create Page for Equity** and **Edit Page for Equity** as the pages for the Equity business entity.

12. On the **Search** tab, in the **Business Entities** section, select **Bond**.
13. In the **Search Result Layouts: Bond** section, click **Add Search Result Layout**.

    A blank row appears.

14. To select a component, click the asset picker.

    The **Select a Component** window appears.

15. On the **Select a Component** window, select **Bond Search Layout**, and assign the component to one or more user roles.

    For more information about the user roles assigned to search result layout components, see "Search result layout components" on page 37.

16. In the left pane, select the Equity business entity, and repeat steps 13 through 15.

    Note: Select **Equity Search Layout** as the search result layout component for the Equity business entity.

For more information about how to assign pages to user roles, see *Assign pages to user roles*.

Importing the predefined reports

Import the predefined reports to visualize data in the form of charts and report tables in MDM SaaS .

To import the predefined reports, ensure that you belong to the Admin user role.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   `<Extracted extension package>/2_Multidomain_Reports(Admin Only).zip`

3. Click **Open**.

   The **Import Assets** page lists the assets in the file.

4. Ensure that all the assets are selected.
5. In the **Review Locations** section, select the target project to which you want to import the assets.
6. Click **Import**.
7. On the **My Import/Export Logs** page, verify whether the import job is successful.

Importing reference data assets

After you import Securities 360 assets, import reference data code values in bulk from CSV files into reference data assets.

The following table describes the files and folders in the extracted reference data directory:

File or Folder Name	Description
`Reference Data`	The Reference Data folder that contains the lookup code values folders. The Reference Data folder contains the following folders: - `_1`. Contains the parent lookup code values. - `_2`. Contains the child lookup code values. - `LoadReferenceData.py`. Python script to import based reference data.

To import code values in bulk from CSV files that are available in the extracted reference data directory, run the `LoadReferenceData.py` Python script.

Prerequisites

Before you import reference data into your system, ensure that you meet the prerequisites.

Complete the following prerequisite tasks:

- Ensure that you have permission to import reference data.
- Install Python version 3 or later on your machine.
- To verify whether the cURL library files are pre-installed and to check the cURL library version, run the following command from a command prompt:
  ```
  curl --version
  ```
  Note: If cURL isn't available in your operating system, ensure that you install it. You can download the cURL library for your operating system from the cURL website:
  ```
  http://curl.haxx.se/download.html
  ```

Importing the reference data

To import all the reference data in bulk, run the Python script.

1. Open a command prompt, and navigate to the following directory:
   ```
   <Extracted extension package>/Reference Data
   ```
2. Run the following command:
   - On Windows.
     ```
     python LoadReferenceData.py --podHostName <POD host name>.informaticacloud.com --
     userName <user name> --password <password> --region <POD region>
     ```
   - On Linux.
     ```
     python3 LoadReferenceData.py --podHostName <POD host name>.informaticacloud.com --
     userName <user name> --password <password> --region <POD region>
     ```

   The jobs to import reference data code values run.
3. To monitor the status of a job, click **My Jobs** in Reference 360.

   The My Jobs page lists the job instances that are currently running, failed, and successfully completed.

Importing the Application Integration assets

1. In Application Integration, click **Explore** > **Import**.
2. Navigate to the following file:

   `<Extracted extension package>/3_CAI_Assets.zip`
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected.
5. In the **Review Locations** section, select the target project to which you want to import the assets.
6. Click **Import**.
7. On the **My Import/Export Logs** page, verify whether the import job is successful.

Publishing the Application Integration process

To run a Application Integration process, publish the process.

1. In Application Integration, click **Explore** > **Multidomain** > **Securities Master**.
2. To publish the process, click the process, expand the **Actions** menu, and select **Publish**.

   Publish the following processes:
   - infa360sm_proc_MultiStepApproval
   - infa360sm_proc_TwoStepApproval

Importing the Data Integration assets

Import the predefined Data Integration assets, such as mapplets.

1. In Data Integration, click **Explore** > **Import**.
2. Navigate to the following file:

   `<Extracted extension package>/4_DI_Assets.zip`
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected, and click **Import**.
5. On the **My Import/Export Logs** page, verify whether the import job is successful.

CHAPTER 5

Integrating market data providers with Securities 360

Integrate securities data from market data providers, such as Bloomberg and LSEG, into Securities 360 to enrich records with industry-standard securities reference data.

To integrate securities data from market data providers to Securities 360, perform the following tasks:

1. Complete the prerequisite tasks.
2. Use the predefined mapplets in a mapping.
3. Create a crosswalk.
4. Create an ingress job.
5. Run the ingress job.

Prerequisites for data ingress

Before you ingress data, perform the following prerequisites:

- Define the required assets and objects, such as source and Business 360 FEP connections, configure secure agents, and create mappings, mapping tasks, and taskflows in Data Integration.
  For more information about the required assets and objects to ingress data, see "Prerequisites for data ingress" in *Define Jobs*.
- Ensure that you use the predefined Data Integration mapplets provided in the Securities 360 package when you create the mappings. For more information, see “Using the predefined mapplets in the mappings” on page 48.

Using the predefined mapplets in the mappings

Use the predefined mapplets in a mapping to normalize complex market data format into standard market data format and then transform them into the data model attributes of Securities 360.

1. When you create a mapping in Data Integration mapping designer, add the predefined mapplets to the mapping.
   a. If your data source contains flat data, use the following mapplets:
      - `infa360sec_mplt_Bond_Common_Format`
      - `infa360sec_mplt_Equity_Common_Format`
   b. If your data source contains multidimensional data in global data format, such as Bloomberg Data License, use the following mapplets:
      - `infa360sec_mplt_multidim_preprocess_utility`
      - `infa360sec_mplt_Bond_Common_Format`
      - `infa360sec_mplt_Equity_Common_Format`
2. After you select the mapplet, map the mapplet output fields to the target fields.

Use the mapping in a mapping task to ingress the transformed data into Securities 360 through Business 360 FEP Connector.

Creating a crosswalk

After you configure the Data Integration assets, standardize lookup field values from different source systems before ingressing the data.

Create crosswalks for each lookup field in the Securities 360 data model by mapping the source values to the corresponding enterprise code list values in Reference 360 SaaS.

For more information on crosswalks, see *Manage crosswalks* in the Reference 360 SaaS help.

Creating an ingress job

After you define the required prerequisite assets and objects for data ingress, create an ingress job to import securities data from a market data provider to Securities 360. Ensure that you use the Data Integration assets that you created and configured in the ingress job.

For more information about creating an ingress job, see "Ingress Data" in *Define Jobs*.

Running the ingress job

After you integrate Securities 360 with a market data provider, you can run the ingress job to import securities data into the data model attributes of Securities 360.
