Preface

Follow the instructions in MDM Extension for Data 360 to deploy *MDM Extension for Data 360*.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security, compliance, and privacy practices.

You can access the trust center at https://trust.informatica.com/.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing MDM Extension for Data 360

An MDM SaaS extension is a ready-to-use package that streamlines and accelerates the implementation of MDM SaaS. MDM SaaS extensions contain pre-configured assets and integrations that extend and enhance the MDM SaaS business applications. Use an extension to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Use MDM Extension for Data 360 to publish master records and their relationships from Customer 360 SaaS into Salesforce Data 360. You can enrich unified profiles with the published master data to improve segmentation accuracy, enhance calculated insights, and provide trusted context for agentic enterprises. Customer 360 SaaS acts as the authoritative source for master data. Data 360 combines the master data with real-time engagement data to support personalization and AI-driven workflows.

The extension package includes the following contents:

Predefined assets

The assets include predefined egress jobs and Data Integration assets, such as mappings, mapping tasks, and taskflows, to publish master data from Customer 360 SaaS to Data 360.

Preconfigured Data 360 data kit

Delivered as an unmanaged Salesforce package, the data kit includes preconfigured data stream bundles, data lake objects (DLOs), data model objects (DMOs), data mappings, and identity resolution rulesets.

Use MDM Extension for Data 360 to achieve the following goals:

Enrich unified profiles with trusted master data

Provide Data 360 unified profiles with validated, enriched master records and their relationships from Customer 360 SaaS to deliver a complete and trusted view of customers.

Drive identity resolution in Data 360 with Customer 360 SaaS match outcomes

Use Customer 360 SaaS match outcomes and links to source records to drive identity resolution in Data 360. Existing users can continue using their current match configurations. New users can use AI-based matching to get started quickly without creating configurations from scratch.

Power segmentation and calculated insights

Use validated and enriched master data along with relationships in segmentation, analytics, and calculated insights in Data 360.

Provide trusted context to agentic enterprises

Make connected and trusted master data available to agentic enterprises across sales, service, marketing, and commerce experiences.

Guidelines

Consider the following rules and guidelines when you use the extension:

- Set up the prerequisite MDM SaaS business application.
- After you import the assets, consider them as your custom assets.
- After you deploy an extension, upgrading to a newer version of the extension isn't supported.
- To migrate the extension assets to higher environments, such as QA and production, export the assets from the development environment. Then, import them into the QA and production environments. For more information about migrating assets, see *Migrating projects and assets*.
- Don't import the extension assets again into a higher environment.

Prerequisites

Before you deploy MDM Extension for Data 360, perform the following prerequisites:

- Ensure that you have the license for the Integration Components for Business 360, Customer 360 SaaS Edition, and Salesforce Data 360 Connector.
  Ensure your organization uses an Enterprise or Developer Edition of Salesforce with Salesforce Data 360 provisioned and enabled.

  Ensure that you have administrator rights to install an unmanaged Salesforce package.

  Ensure that you have the licenses and user permissions required to manage connections and external data.

Note: The use of the extension doesn't confer any additional license or entitlement to license consumption beyond the terms specified in the applicable licensing agreements.

- Ensure that the version of the package matches the current MDM SaaS version where you import the extension assets.
  To view the MDM SaaS version, in Business 360 Console, click **About** in the Help menu and verify the build version.

  To view the MDM version of the extension, navigate to the readme text file in the extracted extension package and verify the platform version.

  If the version of the extension package doesn't match the current MDM SaaS version, contact Informatica Global Customer Support to use the current version of the extension.

CHAPTER 2

MDM Extension for Data 360 and Data 360 integration

Use MDM Extension for Data 360 to integrate Customer 360 SaaS with Data 360. Use the predefined MDM Extension for Data 360 assets to publish master data from Customer 360 SaaS to Data 360. The published master data enriches unified profiles and improves segmentation accuracy, enhances calculated insights, and provides trusted context for agentic enterprises.

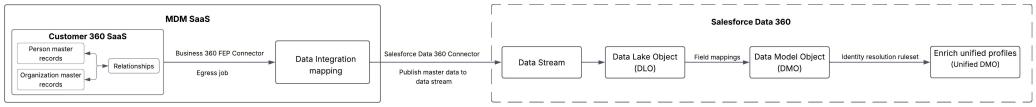

Egress data

You can use the predefined egress jobs to export master data from the Organization and Person business entities of Customer 360 SaaS to Data 360.

Each egress job uses a taskflow to run mapping tasks. Each mapping task includes a mapping that maps the Customer 360 SaaS business entity fields to the Data 360 data lake object (DLO) fields. The job uses Business 360 FEP Connector to read data from Customer 360 SaaS and Salesforce Data 360 Connector to write data to Data 360. The egress jobs use predefined Data Integration assets, such as mappings, mapping tasks, and taskflows, to publish the master records and their relationships to data streams in Data 360.

After you deploy the preconfigured data kit, run predefined egress jobs. The Salesforce Ingestion API ingests the master data from data streams into Data 360 DLOs. The preconfigured field mappings automatically populate the master data into Data 360 data model objects (DMOs). When you run the identity resolution rulesets, the unified profiles in Data 360 are enriched with master data from Customer 360 SaaS.

The following image shows how master data is published from Customer 360 SaaS to Data 360 using MDM Extension for Data 360:

CHAPTER 3

Predefined MDM Extension for Data 360 assets

MDM Extension for Data 360 is available as a package for installation on request.

MDM Extension for Data 360 integrates Data 360 data model objects with the predefined business entities of Customer 360 SaaS, such as Organization and Person.

For more information about Customer 360 SaaS data dictionary, see *Customer 360 SaaS data dictionary* in the Customer 360 SaaS help.

The extension package includes the following predefined assets:

- Batch jobs
- Data Integration assets
- Data 360 data kit

Batch jobs

Use the predefined egress jobs to export master data from Customer 360 SaaS to Data 360.

Each job uses a taskflow to run a mapping task. Each mapping task includes a mapping that maps the Customer 360 business entity fields to Data 360 data model fields.

Batch job of the Organization business entity

You can use the predefined batch job to export master records from the Organization business entity to a data stream in Data 360.

The following table lists the predefined egress job and its related taskflow, mapping tasks, and mappings of the Organization business entity:

Job Name	Taskflow	Mapping Task	Mapping	Description
infac360datacloud_egress_customer_org_load_dlo	infac360datacloud_tf_customer_org_load_dlo	- infac360datacloud_mt_customer_org_root_outbound_org_master_dlo - infac360datacloud_mt_customer_org_address_outbound_org_address_dlo - infac360datacloud_mt_customer_org_AlternateName_outbound_org_AlternateName_dlo - infac360datacloud_mt_customer_org_Email_outbound_org_Email_dlo - infac360datacloud_mt_customer_org_Financial_outbound_org_Financial_dlo - infac360datacloud_mt_customer_org_identifier_outbound_org_identifier_dlo - infac360datacloud_mt_customer_org_KeyPeople_outbound_org_KeyPeople_dlo - infac360datacloud_mt_customer_org_indicator_outbound_org_indicator_dlo - infac360datacloud_mt_customer_org_phone_outbound_org_phone_dlo - infac360datacloud_mt_customer_org_Socialmedia_outbound_org_Socialmedia_dlo - infac360datacloud_mt_customer_org_Status_outbound_org_Status_dlo - infac360datacloud_mt_customer_org	- infac360datacloud_m_customer_org_root_outbound_org_master_dlo - infac360datacloud_m_customer_org_address_outbound_org_address_dlo - infac360datacloud_m_customer_org_AlternateName_outbound_org_AlternateName_dlo - infac360datacloud_m_customer_org_Email_outbound_org_Email_dlo - infac360datacloud_m_customer_org_Financial_outbound_org_Financial_dlo - infac360datacloud_m_customer_org_identifier_outbound_org_identifier_dlo - infac360datacloud_m_customer_org_indicator_outbound_org_indicator_dlo - infac360datacloud_m_customer_org_KeyPeople_outbound_org_KeyPeople_dlo - infac360datacloud_m_customer_org_phone_outbound_org_phone_dlo - infac360datacloud_m_customer_org_Socialmedia_outbound_org_Socialmedia_dlo - infac360datacloud_m_customer_org_Status_outbound_org_Status_dlo	Exports master records from the Organization business entity in Customer 360 SaaS to MDM_C360_Account data stream in Data 360.

Job Name	Taskflow	Mapping Task	Mapping	Description
		_stock_outbound_org_stock_dlo - infac360datacloud_mt_customer_org_TaxDetail_outbound_org_TaxDetail_dlo - infac360datacloud_mt_customer_org_person_rel_outbound_org_person_rel_dlo	- infac360datacloud_m_customer_org_stock_outbound_org_stock_dlo - infac360datacloud_m_customer_org_TaxDetail_outbound_org_TaxDetail_dlo - infac360datacloud_m_customer_org_person_rel_outbound_org_person_rel_dlo	

Batch job of the Person business entity

You can use the predefined batch job to export master records from the Person business entity to a data stream in Data 360.

The following table lists the predefined egress job and its related taskflow, mapping tasks, and mappings of the Person business entity:

Job Name	Taskflow	Mapping Task	Mapping	Description
infac360datacloud_egress_customer_person_load_dlo	infac360datacloud_tf_customer_person_load_dlo	- infac360datacloud_mt_customer_person_root_outbound_person_master_dlo - infac360datacloud_mt_customer_person_address_outbound_person_address_dlo - infac360datacloud_mt_customer_person_AlternateName_outbound_person_AlternateName_dl - infac360datacloud_mt_customer_person_Citizenship_outbound_person_Citizenship_dlo - infac360datacloud_mt_customer_person_Demographic_outbound_person_Demographic_dlo - infac360datacloud_mt_customer_person_Education_outbound_person_Education_dlo - infac360datacloud_mt_customer_person_Email_outbound_person_Email_dlo - infac360datacloud_mt_customer_person_Employment_outbound_person_Employment_dlo - infac360datacloud_mt_customer_person_Financial_outbound_person_Financial_dlo - infac360datacloud_mt_customer_person_identifier_outbound_person_identifier_dlo	- infac360datacloud_m_customer_person_root_outbound_person_master_dlo - infac360datacloud_m_customer_person_address_outbound_person_address_dlo - infac360datacloud_m_customer_person_AlternateName_outbound_person_AlternateName_dlo - infac360datacloud_m_customer_person_Citizenship_outbound_person_Citizenship_dlo - infac360datacloud_m_customer_person_Demographic_outbound_person_Demographic_dlo - infac360datacloud_m_customer_person_Education_outbound_person_Education_dlo - infac360datacloud_m_customer_person_Email_outbound_person_Email_dlo - infac360datacloud_m_customer_person_Employment_outbound_person_Employment_dlo - infac360datacloud_m_customer_person_Financial_outbound_person_Financial_dlo - infac360datacloud_m_customer_person_identifier_outbound_person_identifier_dlo	Exports master records from the Person business entity in Customer 360 SaaS to the MDM_C360_Individual data stream in Data 360.

Job Name	Taskflow	Mapping Task	Mapping	Description
		- infac360datacloud_mt_customer_person_LoyaltyAccount_outbound_person_LoyaltyAccount_dlo - infac360datacloud_mt_customer_person_phone_outbound_person_phone_dlo - infac360datacloud_mt_customer_person_SocialHandle_outbound_person_SocialHandle_dlo - infac360datacloud_mt_customer_person_Specialization_outbound_person_Specialization_dlo - infac360datacloud_mt_customer_person_Status_outbound_person_Status_dlo - infac360datacloud_mt_customer_person_TaxDetail_outbound_person_TaxDetail_dlo	- infac360datacloud_m_customer_person_LoyaltyAccount_outbound_person_LoyaltyAccount_dlo - infac360datacloud_m_customer_person_phone_outbound_person_phone_dlo - infac360datacloud_m_customer_person_SocialHandle_outbound_person_SocialHandle_dlo - infac360datacloud_m_customer_person_Specialization_outbound_person_Specialization_dlo - infac360datacloud_m_customer_person_Status_outbound_person_Status_dlo - infac360datacloud_m_customer_person_TaxDetail_outbound_person_TaxDetail_dlo	

Batch job for exporting source primary keys

You can use the predefined batch job to export source primary keys from the Organization and Person business entities in Customer 360 SaaS to data streams in Data 360.

The following table lists the predefined egress job and its related taskflow, mapping tasks, and mappings to export source primary key data:

Job Name	Taskflow	Mapping Task	Mapping	Description
infac360datacloud_egress_customer_xreflink_load_dlo	infac360datacloud_tf_xrefLink_Load_dlo	- infac360datacloud_mt_customer_org_XrefLink_outbound_org_XrefLink_dlo - infac360datacloud_mt_customer_person_XrefLink_outbound_person_XrefLink_dlo	- infac360datacloud_m_customer_org_XrefLink_outbound_org_XrefLink_dlo - infac360datacloud_m_customer_person_XrefLink_outbound_person_XrefLink_dlo	Exports source primary keys for both Organization and Person business entities in Customer 360 SaaS into data streams in Data 360

Data 360 data kit

The Data 360 data kit contains preconfigured components that ingest Customer 360 master data into Data 360, map it to data model objects (DMOs), and resolve identities to build unified profiles.

Informatica MDM Extension for Data 360, an unmanaged Salesforce package, includes the Data 360 data kit.

The data kit contains the following preconfigured components:

- Data stream bundles. Data stream definitions that ingest master data published from Customer 360 SaaS into Data 360.
- Data lake objects (DLOs). Staging objects within the data lake to store the ingested master data.
- Data model objects (DMOs). Standard groupings of attributes populated by fields mapped from DLOs.
- Data mappings. Field mappings that connect source fields in DLOs to target attributes in DMOs.
- Identity resolution rulesets. Matching and reconciliation rules that build unified profiles.

Data mappings

Data mappings define how fields in a data lake object (DLO) correspond to fields in a data model object (DMO). Data 360 uses these mappings to route and transform data from DLO fields to their corresponding DMO fields.

When you integrate Customer 360 SaaS with Data 360, data streams populate the DLO from Customer 360 SaaS. These mappings connect Customer 360 SaaS fields to their target Data 360 DMO fields.

Mapping of Organization business entity and Data 360 DMO

The fields in the Organization business entity are mapped to the target fields in Data 360 data model object (DMO).

General fields of the Organization business entity

The following table lists the General fields that are mapped to the Account DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Name	name	Account Name
Number of Employees	numberOfEmployees	Employee Count
Date of Incorporation	dateOfIncorporation	Date of Incorporation
Industry	industry	Primary Industry
Website	website	Website
Country of Incorporation	countryOfIncorporation	Country of Incorporation
State of Incorporation	stateOfIncorporation	State of Incorporation

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Company Logo	imageUrl	Company Logo
Company Type	companyType	Company Type

Address field group of the Organization business entity

The following table lists the fields in the Address field group that are mapped to the Contact Point Address DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Default Indicator	defaultIndicator	Default Indicator
Address Type	address Type	Contact Point Type
Usage Type	usage Type	Usage Type
Address Status	address Status	Is Active
Address Line 1	address Line 1	Address Line 1
Address Line 2	address Line 2	Address Line 2
Address Line 3	address Line 3	Address Line 3
Country	country	Country
State	state	State Province
City	city	City
County	county	County
Postal Code	postal Code	Postal Code
PostalCode Extension	postalCode Extension	PostalCode Extension
Coordinate System	coordinateSystem	Coordinate System
Location Coordinate Desc	locationCoordinateDesc	Location Coordinate Desc
Start Date	Start Date	Active From Date
End Date	End Date	Active To Date
Latitude	Latitude	Geo Latitude
Longitude	Longitude	Geo Longitude
Enriched Indicator	enriched Indicator	Enriched Indicator
Verification Status Code	statusCode	Verification Status Code

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Verification Message	statusMessage	Verification Message
Elevation	elevation	Elevation

Alternate Name field group of the Organization business entity

The following table lists the fields in the Alternate Name field group that are mapped to the Account Name custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Name Type	alternateNameType	Name Type
Alternate Name	AlternateName	Alternate Name
Effective Start Date	effectiveStartDate	Effective Start Date
Effective End Date	effectiveEndDate	Effective End Date

Email field group of the Organization business entity

The following table lists the fields in the Email field group that are mapped to the Contact Point Email DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Default Indicator	defaultIndicator	Default Indicator
Usage Type	usageType	Usage Type
Electronic Address	electronicAddress	Email Address
Electronic Address Status	electronicAddressStatus	Is Active
Effective Start Date	effectiveStartDate	Active From Date

Net Protect Code	netProtectCode	Net Protect Code
Verification Status Code	validationStatusCode	Is Verified
Verification Message	validationMessage	Verification Message
Hygiene Status	hygieneStatus	Hygiene Status
Enriched Indicator	enrichedIndicator	Enriched Indicator

Financial field group of the Organization business entity

The following table lists the fields in the Financial field group that are mapped to the Party Financial Information custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Currency	currency	Currency
Unit	unit	Unit
Finance Reliability	financeReliability	Finance Reliability
Time Period	timePeriod	Time Period
Time Period Type	timePeriodType	Time Period Type
Finance Info Type	financeInfoType	Finance Info Type
Amount	amount	Amount

Identification field group of the Organization business entity

The following table lists the fields in the Identification field group that are mapped to the Party Identification DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Identification Type	alternateIdentifierType	Identification Name
Identification Value	alternateIdentifierValue	Identification number
Issuing Authority	issuingAuthority	Issued By Authority
Status	identifierStatus	Status
Effective Start Date	effectiveStartDate	Issued Date
Effective End Date	effectiveEndDate	Expiry Date

Indicator field group of the Organization business entity

The following table lists the fields in the Indicator field group that are mapped to the Party Indicator custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Indicator Type	indicatorType	Indicator Type
Indicator Value	value	Indicator Value

Key People field group of the Organization business entity

The following table lists the fields in the Key People field group that are mapped to the Key People custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Name	name	Name
Executive Type	executiveType	Executive Type
Designation	designation	Designation

Phone field group of the Organization business entity

The following table lists the fields in the Phone field group that are mapped to the Contact Point Phone DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Default Indicator	defaultIndicator	Default Indicator
Do Not Call Indicator	doNotCallIndicator	Do Not Call Indicator
Phone Usage Type	phoneUsageType	Usage Type

International Prefix	internationalPrefix	International Prefix
National Prefix	nationalPrefix	National Prefix
Cell Prefix	cellPrefix	Cell Prefix
Effective Start Date	effectiveStartDate	Active From Date
Effective End Date	effectiveEndDate	Active To Date
National Destination Code	nationalDestinationCode	National Destination Code
National Destination Code Indicator	nationalDestinationCodeIndicator	National Destination Code Indicator
National Format	nationalFormat	Formatted National Phone number
International Format	internationalFormat	Formatted International Phone number
ISO	iso	ISO
Verification Status Code	validationStatusCode	Verification Status Code

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Enriched Indicator	enrichedIndicator	Enriched Indicator
Verification Message	validationMessage	Verification Message
Status	status	Is Active

Social Media field group of the Organization business entity

The following table lists the fields in the Social Media field group that are mapped to the Contact Point Social DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Social Media Handle	socialMediaHandle	Social Handle ID
Social Media Type	socialHandleType	Social Network Provider

Status field group of the Organization business entity

The following table lists the fields in the Status field group that are mapped to the Party Status custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Status Type	statusType	Status Type
Status Value	statusValue	Status Value

Stock field group of the Organization business entity

The following table lists the fields in the Stock field group that are mapped to the Organization Stock Information custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Stock Exchange	stockExchangeName	Stock Exchange
Ticker Symbol	tickerSymbol	Ticker Symbol
Country	country	Country

Tax Details field group of the Organization business entity

The following table lists the fields in the Tax Details field group that are mapped to the Party Tax Profile custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Tax Number Type	taxNumberType	Tax Number Type
Tax Number	taxNumber	Tax Number
Tax Authority	taxAuthority	Tax Authority
Tax Paid	taxPaid	Tax Paid
Taxpayer Type	taxPayerType	Taxpayer Type
Currency	currency	Currency
Country	country	Country
State	state	State
Effective Start Date	effectiveStartDate	Effective Start Date
Effective End Date	effectiveEndDate	Effective End Date

Mapping of Person business entity and Data 360 DMO

The fields in the Person business entity are mapped to the target fields in Data 360 data model object (DMO).

General fields of the Person business entity

The following table lists the General fields that are mapped to the Individual DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
First Name	first Name	First Name
Middle Name	middle Name	Middle Name
Last Name	last Name	Last Name
Full Name	full Name	Person Name
Prefix Name	prefix Name	Prefix Name
Suffix Name	suffix Name	Name Suffix
Title	title	Title
Designation	designation	Designation
Birth Place	birth Place	Birth Place

Elevation	elevation	Elevation

Alternate Name field group of the Person business entity

The following table lists the fields in the Alternate Name field group that are mapped to the Person Name DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Name Type	alternateNameType	Name Usage Type
Alternate Name	AlternateName	Full Name
Effective Start Date	effectiveStartDate	Begin Effective Date
Effective End Date	effectiveEndDate	End Effective Date

Citizenship field group of the Person business entity

The following table lists the fields in the Citizenship field group that are mapped to the Citizenship custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Citizen of Country	citizenOfCountry	Citizen of Country
Citizenship Status	citizenshipStatus	Citizenship Status
Supporting Document Name	supportingDocumentName	Supporting Document Name
Effective Start Date	effectiveStartDate	Effective Start Date
Effective End Date	effectiveEndDate	Effective End Date

Demographics field group of the Person business entity

The following table lists the fields in the Demographics field group that are mapped to the Person Demographics custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Demographic Type	demographicType	Demographic Type
Demographic Value	demographicValue	Demographic Value

Education field group of the Person business entity

The following table lists the fields in the Education field group that are mapped to the Person Education DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Qualification Type	qualificationType	Education Level
Qualification Name	qualificationName	Education Name
Qualification Status	qualificationStatus	Comment
Institution Name	institutionName	Institution Name
Student Number	studentNumber	Identifier
Effective Start Date	effectiveStartDate	Valid From Date
Effective End Date	effectiveEndDate	Valid To Date
Address Line 1	addressLine1	Address Line 1
Address Line 2	addressLine2	Address Line 2
Country	country	Country
State	state	State
City	city	City
Postal Code	postalCode	Postal Code
Postal Code Extension	postalCodeExtension	Postal Code Extension

Education field group of the Person business entity

The following table lists the fields in the Education field group that are mapped to the Person Education DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Qualification Type	qualificationType	Education Level
Qualification Name	qualificationName	Education Name
Qualification Status	qualificationStatus	Comment
Institution Name	institutionName	Institution Name

Financial field group of the Person business entity

The following table lists the fields in the Financial field group that are mapped to the Party Financial Information custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Currency	currency	Currency
Unit	unit	Unit
Finance Reliability	financeReliability	Finance Reliability
Time Period	timePeriod	Time Period
Time Period Type	timePeriodType	Time Period Type

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Finance Info Type	financeInfoType	Finance Info Type
Amount	amount	Amount

Identification field group of the Person business entity

The following table lists the fields in the Identification field group that are mapped to the Party Identification DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Identification Type	alternateIdentifierType	Identification Name
Identification Value	alternateIdentifierValue	Identification number
Issuing Authority	issuingAuthority	Issued By Authority
Status	identifierStatus	Status
Effective Start Date	effectiveStartDate	Issued Date
Effective End Date	effectiveEndDate	Expiry Date

Lifestyle field group of the Person business entity

The following table lists the fields in the Lifestyle field group that are mapped to the Person Lifestyle custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Lifestyle Type	lifestyleType	Lifestyle Type
Lifestyle Value	lifestyleValue	Lifestyle Value

Loyalty field group of the Person business entity

The following table lists the fields in the Loyalty field group that are mapped to the Loyalty Program Member DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Account Type	accountType	Loyalty Member Type
Account Status	accountStatus	Account Status
Account Number	AccountNumber	Membership Number
Redemption Preferences	redemptionPreferences	Redemption Preferences

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Effective Start Date	effectiveStartDate	Effective Start Date
Effective End Date	effectiveEndDate	Effective End Date

Phone field group of the Person business entity

The following table lists the fields in the Phone field group that are mapped to the Contact Point Phone DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Default Indicator	defaultIndicator	Default Indicator
Do Not Call Indicator	doNotCallIndicator	Do Not Call Indicator
Phone Usage Type	phoneUsageType	Usage Type

Social Media field group of the Person business entity

The following table lists the fields in the Social Media field group that are mapped to the Contact Point Social DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Social Media Handle	socialMediaHandle	Social Handle ID
Social Media Type	socialHandleType	Social Network Provider

Specialization field group of the Person business entity

The following table lists the fields in the Specialization field group that are mapped to the Person Speciality DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Specialty Type	specialtyType	Specialty Type
Specialty	speciality	Specialty
Board Certification Flag	boardCertificationFlag	Board Certification Flag

Status field group of the Person business entity

The following table lists the fields in the Status field group that are mapped to the Party Status custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Status Type	statusType	Status Type
Status Value	statusValue	Status Value

Tax Details field group of the Person business entity

The following table lists the fields in the Tax Details field group that are mapped to the Party Tax Profile custom DMO fields in Data 360:

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Tax Number Type	taxNumberType	Tax Number Type
Tax Number	taxNumber	Tax Number
Tax Authority	taxAuthority	Tax Authority
Tax Paid	taxPaid	Tax Paid
Taxpayer Type	taxPayerType	Taxpayer Type

Customer 360 Display Name	Customer 360 Internal ID	Data 360 DMO Field Name
Currency	currency	Currency
Country	country	Country
State	state	State
Effective Start Date	effectiveStartDate	Effective Start Date
Effective End Date	effectiveEndDate	Effective End Date

CHAPTER 4

Deploying MDM Extension for Data 360

Deploy MDM Extension for Data 360 to integrate Customer 360 SaaS and Data 360.

To deploy the extension, perform the following tasks:

1. Download and extract the extension package.
2. Import the predefined Data Integration assets.
3. Import the predefined batch jobs.
4. Add a Secure Agent.
5. Configure the flat file connection.
6. Configure Business 360 FEP Connector.
7. Configure Business 360 Connector.
8. Install the Data 360 data kit.
9. Deploy the Data 360 data kit.
10. Run the batch jobs.
11. Run the preconfigured identity resolution rulesets in Data 360.

Downloading and extracting MDM Extension for Data 360

To get the MDM Extension for Data 360 package, contact Informatica Global Customer Support.

After you download the extension package, extract the package on your computer.

The extracted package contains the following files and folders:

Folder Name	Description
1_DI_Assets	Contains predefined Data Integration assets, such as mappings, mapping tasks, and taskflows.
2_MDM_Job_Assets	Contains predefined batch jobs.
Template	Contains the Unmerge_Scenario_Template.csv file used as a data source in the unmerge mapping to synchronize unmerged Customer 360 SaaS records with Data 360.

Importing the predefined Data Integration assets

Import the predefined Data Integration assets, such as taskflows, mapping tasks, and mappings.

1. In Data Integration, click **Explore** > **Import**.
2. Navigate to the following file:

   <Extracted extension package>/1_DI_Assets.zip
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected, and then select **Publish Taskflow(s) after import**.
5. Click **Import**.
6. On the **My Import/Export Logs** page, verify whether the import job is successful.

Importing the predefined batch jobs

After you import the Data Integration assets, import the predefined batch jobs. Use the egress batch jobs to publish master data from Customer 360 SaaS to Data 360.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   <Extracted extension package>/2_MDM_Job_Assets.zip
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected, and click **Import**.
5. On the **My Import/Export Logs** page, verify whether the import job is successful.

Adding a Secure Agent

To run the Data Integration processes securely, add a Secure Agent to the predefined Secure Agent group.

1. In Administrator, click **Runtime Environments**.
2. Expand the **Actions** menu for the `infa_extension_runtime` Secure Agent group, and select **Add or Remove Secure Agents**.
3. In the **Available Agents** list, select the Secure Agent that you want to add to the group, and click **Select**.
4. Expand the **Actions** menu for the `infa_extension_runtime` Secure Agent group, and select **Enable or Disable Services, Connectors**.
5. From the **Services** tab, select the services to enable for the Secure Agent group.
6. From the **Connectors** tab, select the connectors to enable for the Secure Agent group.
7. Click **Save**.

Configuring the flat file connection

After you import the extension assets, to access the flat files from the Secure Agent, configure the flat file connection.

- Configure the flat file connection.
  a. In Administrator, click **Connections**.
  b. Click `infac360sf_conn_flatfile`.
  c. Verify the directory to store the flat file.
     Default is `C:\ReferenceData`.
  d. Test the connection, and ensure that the connection is successful.

Configuring Business 360 FEP Connector

You can use Business 360 FEP Connector to read data from Customer 360 SaaS.

1. In Administrator, click **Connections**.
2. Click `infac360salesforce_conn_data360_fep`.
3. Test the connection.
4. If the connection fails, verify and ensure that the connection is successful.
   a. Verify the license used for Business 360 FEP Connector.
   b. Ensure that the connector is enabled for the Secure Agent group.
   c. Restart the Secure Agent.

Configuring Business 360 Connector

You can use Business 360 Connector to read data from Customer 360 SaaS.

1. In Administrator, click **Connections**.
2. Click `infac360_conn_business360`.
3. Test the connection.

   The connection might fail with the following error:
   `The test connection for infac360_conn_business360 failed. Unable to fetch connector attributes, Ensure adapter ID is valid[com.infa.adapter.mdmflat].`
4. If the connection fails, verify and ensure that the connection is successful.
   a. Ensure that you have a license for Business 360 Connector.
   b. Ensure that the connector is enabled for the Secure Agent group.
   c. Restart the Secure Agent.

Installing the Data 360 data kit

Informatica MDM Extension for Data 360, an unmanaged Salesforce package, includes the Data 360 data kit.

Before you begin, ensure that Salesforce Standard Data Model Version 1.132 or later is installed in your Salesforce org.

1. To access the unmanaged Salesforce package, use the following URLs:
   - Production environment.
     `https://login.salesforce.com/packaging/installPackage.apexp?p0=04tgK000000EUHZ`
   - Sandbox environment.
     `https://test.salesforce.com/packaging/installPackage.apexp?p0=04tgK000000EUHZ`

   The Salesforce login page appears.
2. Enter your user credentials, and click **Log In**.

   The **Install Informatica MDM Extension for Data 360** page appears.
3. In the Installation Key field, enter `JULYRELEASE#2026` as the installation key.
4. Select **Install for All Users**.
5. Click **Install**.
6. To view the package components, click **View Components**.
7. After the installation is complete, click **Done**.

   If the installation takes a long time, a message appears stating that you will receive an email when the installation is complete.

   The **Installed Packages** page lists Informatica MDM Extension for Data 360.

Deploying the Data 360 data kit

After you install the Data 360 data kit, deploy it to use the predefined data streams, data lake objects, data model entities, and identity resolution rules in Data 360.

Before you begin, ensure that you have set up an Ingestion API Connector in your Salesforce organization.

1. From **Setup**, enter `Data Kits` in the Quick Find box.
2. Click **Data Kits**.
3. Click **Informatica MDM Extension for Data 360**.

   The Informatica MDM Extension for Data 360 data kit details page appears.
4. Click **Data Kit Deploy**.

   The Deploy dialog box appears.
5. Select a data space to assign the components to.
6. Select the **MDM_C360_Individual** data stream, select your Ingestion API Connector, and click **Deploy**.

   The data kit deployment begins.
7. Repeat the previous step for the **MDM_C360_Account** data stream.
8. To check the deployment status, click **Deployment History**.

   Verify that the deployment status for all components is successful.
9. From **App Launcher**, find and open the Data 360 application.

   The deployed components appear on the **Data Streams**, **Data Lake Objects**, **Data Model**, and **Identity Resolutions** tabs.

Running the batch jobs

After you deploy the preconfigured data kit in Data 360, run the egress batch jobs in Customer 360 SaaS. On the **My Jobs** page, verify whether the egress jobs are successful.

Running the preconfigured Identity Resolution rulesets in Data 360

After the egress batch jobs in Customer 360 SaaS complete successfully, run the following preconfigured identity resolution rulesets in Data 360:

- Individual Matching based on MDM Links
- Account Matching based on MDM Links

CHAPTER 5

Synchronizing unmerged records in Data 360

Create, update, delete, and merge changes to records in Customer 360 SaaS are published to Data 360 through egress batch jobs. Unmerged records are published through a predefined taskflow that reads the records from a template file.

After deploying the extension, run the unmerge taskflow whenever you need to publish unmerged records from Customer 360 SaaS to Data 360.

Running the taskflow to unmerge records in Data 360

After deploying the extension, run the unmerge taskflow to publish unmerged records from Customer 360 SaaS to Data 360.

1. On your computer, navigate to the following file in the extracted extension package:

   `<Extracted extension package>/Template/Unmerge_Scenario_Template.csv`

2. Open the CSV file.
3. Add one row for each source record that you have unmerged in Customer 360 SaaS. and specify the following details:

Column	Description
MDMLinkId	Primary source key. Unique identifier for the link between master record and unmerged records in Customer 360 SaaS.
MDMID	Business ID of the master record in Customer 360 SaaS.
Entity1	Entity type of the master record, such as Person or Organization.
UnmergedMDMID	Business ID of the unmerged record in Customer 360 SaaS..
Entity2	Entity type of the unmerged record, such as Person or Organization.
lastUpdateDate	Date and time when the record was unmerged in Customer 360 SaaS.

Column	Description
isLinked	Indicates whether the master record and the unmerged record are matched and linked. Enter `0` to specify that the records are unmerged in Customer 360 SaaS.
mdmLinkType	Type of identity match link that the identity resolution rulesets use. Enter `MDM-Links`.

4. Save and close the CSV file.
5. In Data Integration, click **Explore** > **Customer360** > **Data360 Extension**.
6. Select the **infac360datacloud_m_customer_unmerge** mapping.
7. In the Properties panel, click **Source**.
8. From the **Connection** list, select **infac360_conn_flatfile**.
9. For **Object**, click **Select** and choose **Unmerge_Scenario_Template.csv**.
10. Click **Save**.
11. Run the **infac360datacloud_tf_customer_unmerge** taskflow.

    On the **My Jobs** page, verify that the taskflow status is **Successful**.

The unmerged records are removed from the unified profile the next time the identity resolution rulesets run in Data 360.
