Abstract

This article describes how to enable Secure@Source to skip large files during a scan on an unstructured data store. If you do not enable this option, then an Out of Memory error occurs if the unstructured data store includes a file larger than 15 MB.

Supported Versions

- Secure@Source 4.5

Setup Scan to Skip Large Files Overview

By default, Secure@Source can scan unstructured data stores that contain files with file size up to 15 MB each. If the unstructured source contains a file greater than 15 MB, an **Out of Memory** error occurs during the scan.

To resolve the issue, install Secure@Source EBF 14041 and specify the minimum file size to skip in the Catalog Service custom property. Then scan the unstructured source. During the scan, Secure@Source skips files that are larger than the value specified in the custom property.

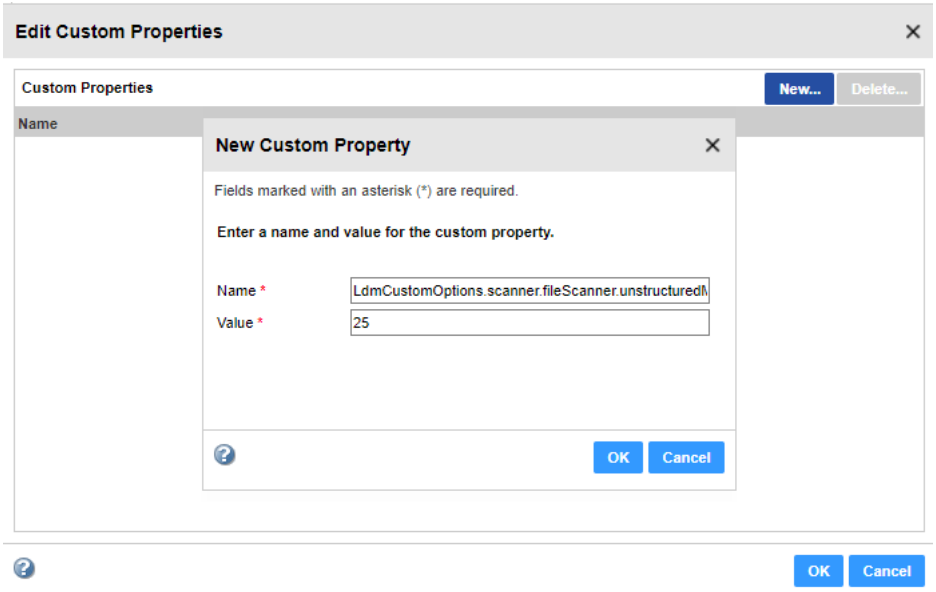

Configuring the Custom Property in Catalog Service

1. Log in to the Administrator tool.
2. Click the **Manage** tab.
3. Click the **Services and Nodes** view.
4. In the **Domain Navigator** pane, click the **Catalog Service**.
5. Click **Actions** at the top right of the **Services and Nodes** view.
6. Select **Disable Service**.
7. In the Catalog Service **Properties** pane, scroll to the **Custom Properties** section.
8. Click the **Edit** icon for **Custom Properties**.

   The **Edit Custom Properties** window appears.
9. Click **New**.

   The **New Custom Property** window appears.
10. In the **Name** field, enter: `LdmCustomOptions.scanner.fileScanner.unstructuredMaxFileSizeInMB`
11. In the **Value** field, enter a number to represent the minimum file size to skip during a scan.

For example, if you want Secure@Source to skip files with a file size greater than 25 MB, enter `25`.

12. Click **OK**.

    The **New Custom Property** window closes.

13. Click **OK**.

    The **Edit Custom Properties** window closes.

14. Click **Actions** at the top right of the **Services and Nodes** view.

15. Select **Recycle Service**.

    Scan the unstructured data store. The scan skips any file with a file size greater than the value you specified and continues scanning the unstructured data store.

Viewing the Scanner Logs

After the scan completes, access the scanner log to determine which files the scan skipped.

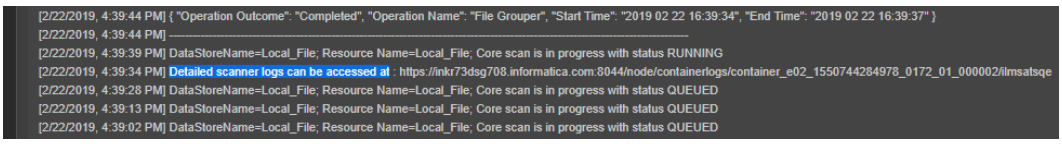

1. Log in to Secure@Source.
2. Click **Manage** > **Jobs**.

   The **Jobs** workspace appears.

3. Click the **Job ID** for the unstructured scan job.

   The **Job Details** page appears.

4. Select the **Load Catalog** job step.
5. From the **Log** pane, locate the following line: `Detailed scanner logs can be accessed at:`

6. Copy the URL for the detailed scanner logs and paste it in a browser.
7. View the files that the scan skipped.
