Preface

Read *Introduction and Getting Started* to learn how to access Data Marketplace, get familiar with the home page and to understand how to use Data Marketplace for your business.

Note: If some of the terms that are used on this help differ from what is displayed on the Data Marketplace interface, contact your Data Marketplace Administrator to understand the terminology defined for your organization. For more information, see the *Label Customizations* topic in the *Set Up Data Marketplace* help.

CHAPTER 1

Welcome to Data Marketplace

Data Marketplace is a transactional space that connects data providers with data consumers. You can publish data collections for business use and find data collections that others in your organization have published.Data Marketplace accelerates the business value of your organization and allows people to source business value from data, enabling true data democratization.

Based on the common shopping cart experience, the self-service functions of the Data Marketplace provide autonomy to search and request access to data collections. Data Marketplace users that have the relevant permissions can use the data to make business decisions.

You can also quickly load assets that are governed in Data Governance and Catalog into Data Marketplace. Users in your organization can utilize these assets that are governed in Data Governance and Catalog, to make key decisions.

Prerequisites

To access Data Marketplace from the Informatica® Intelligent Data Management Cloud™ (IDMC) **My Services** page, your organization's IDMC Administrator must grant you access to Data Marketplace.

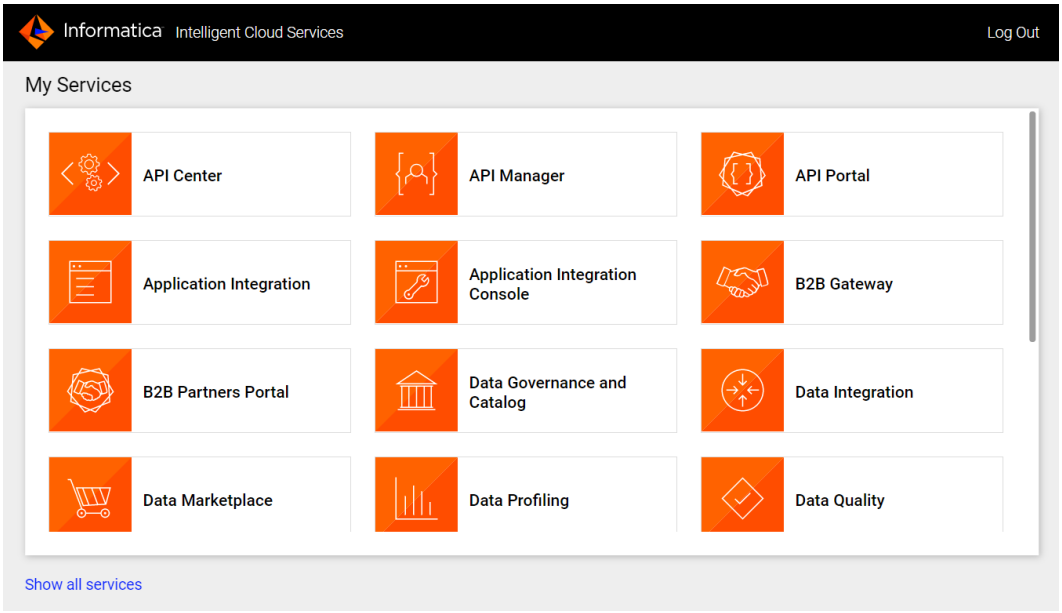

For more information, see Chapter 2, “Permissions and privileges for Data Marketplace” on page 8.

Log in

To log in to Data Marketplace, sign in to IDMC, and select Data Marketplace from the **My Services** page.

When you log in to IDMC, the **My Services** page displays the services that your organization is licensed to use and common services that are available under the same license, such as Administrator. If your organization has trial licenses for additional services, the page displays those services.

The following image shows an example of the **My Services** page:

CHAPTER 2

Permissions and privileges for Data Marketplace

Before you can use Data Marketplace, you must assign the appropriate permissions and privileges to the users of the organization that will use Data Marketplace.

Roles in Data Marketplace

A role is a set of privileges that you can assign to users and user groups. Roles define the boundaries within which the users can act. As an organization administrator, you can assign two types of roles to the users in your organization.

User roles

A user role defines the permissions and privileges for different types of assets and features. Administrators can create and assign user roles for the organization in Administrator. You can assign a user role to the users or user groups in your organization.

The organization administrator can assign either a predefined IDMC role or a custom role to a user. Predefined roles allow you to quickly get the users in your organization started with Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10. Custom roles allow you to refine user permissions and privileges based on the needs of your organization. For more information about custom roles, see "Custom roles" on page 38.

The administrator can assign the role to an individual user and a user group. For more information about assigning user roles, see *User Administration* in Administrator.

Stakeholder roles

A stakeholder role is a defined organizational responsibility that you declare on Data Marketplace items such as a category or a data collection. Stakeholder roles allow you to control how authorized users interact with the items for which they are responsible.

A stakeholder role reflects a user's responsibilities as a stakeholder of an item and allows them to perform tasks with only the necessary permissions and privileges. In Metadata Command Center, you can create stakeholder roles from user roles and use them in access policies to grant users granular access to items.

Unlike with IDMC user roles that allow users to perform actions across Data Marketplace, a user with a stakeholder role can only perform actions on the assets on which they are assigned as a stakeholder. For example, a user that is assigned with the Data Marketplace Administrator user role can perform actions such as create, modify or delete data assets. On the other hand, a user that is assigned as a stakeholder of a category with the Category Owner stakeholder role can only manage their respective category and the subcategories and data collections within it.

Metadata access control

If you require a more granular access management experience, you can leverage metadata access control in Metadata Command Center to exert even greater control over how users interact with the items in Data Marketplace. Metadata access control is the practice of managing the level of user access to assets in your organization through a set of rules called access policies.

As an administrator, you can define access policies in Metadata Command Center that allow you to:

- Specify the items that users can interact with.
- Control the individual aspects of an item, providing different levels of access to different users.
- Define the users that can assume stakeholder responsibilities for an item.

Metadata access controls allow you to ensure that users can only view the data and perform the actions you deem appropriate. This can include obfuscating or hiding segments of data in Data Marketplace. For example, your company has data collections that contain sensitive information for a possible but incomplete acquisition. You might want to allow only your Mergers and Acquisitions team to view the data collections. To accomplish this, you can create a separate category called 'Mergers and Acquisitions' and add the relevant data collections to this category. After this, you can apply the relevant metadata access controls to the category to hide it from the view of unauthorized users.

For more information about how you can use metadata access control in Metadata Command Center, see the *Use Metadata Command Center to enrich and manage items* topic in the *Set Up Data Marketplace* help.

Asset permissions

As an organization administrator, you can assign asset permissions to custom roles using access policies defined in Metadata Command Center. Depending on the permissions, users can view, create, modify, delete or manage the access for objects in Data Marketplace.

In Metadata Command Center, you can view or modify the asset permissions associated with an access policy. To view the asset permissions, on the **Access Control** page of the Metadata Command Center service, open a policy. The **Overview** tab displays the role that is associated with the access policy. To view the asset permissions assigned to the role using the access policy, click the **Rules** tab. For more information, see the *Administration* help in Metadata Command Center.

You can assign the following permissions on a Data Marketplace object:

- **Create**. Allows you to create an object.
- **Delete**. Allows you to delete an object.
- **Manage Access**. Allows you to manage the access to an object.
- **Read**. Allows you to view an object.
- **Update**. Allows you to modify the properties of an object.

The **Create**, **Update** and **Manage Access** permissions for a Data Marketplace object allow a user to perform these actions through the user interface or using the bulk create process.

Feature privileges

As an organization administrator, you can assign specific feature privileges for user roles in Administrator. Depending on the privileges, users can access certain features, while other features are restricted.

In the IDMC Administrator, you can view the feature privileges assigned to a predefined role or modify the feature privileges assigned to a custom role. To do this, on the **User Roles** page of the Administrator service, open a role, select the `Data Marketplace` option in the **Services** field and click the **Features** tab to view or modify the privileges assigned to the role. You can only modify the feature privileges assigned to a custom role. For more information, see the *Cloud Platform* help.

Features privileges

The following table explains the features privileges in IDMC Administrator that are available to a user role for the Data Marketplace service:

Features	Description
Access Data Marketplace	Displays Data Marketplace in the IDMC **My Services** page. This privilege also allows a user to browse Data Marketplace for data.
Approve or Reject Orders	Allows a user to approve or reject an order for a data collection.
Cancel Your Orders And Data Collection Requests	Allows a user to cancel an order or a data collection request that they submitted.
Complete or Reject Data Collection Requests	Allows a user to complete or reject a data collection request that is placed for a category or data collection for which they are responsible.
Configure And Manage Data Marketplace	Allows a user to configure the various settings of Data Marketplace.
Fulfill Or Reject Orders	Allows a user to fulfill or reject an order for a data collection.
View Set up page	Allows a user to view the **Setup** page.
Withdraw Consumer Accesses	Allows a user to withdraw a consumer access on a data collection.

Predefined roles

Predefined user roles are system-defined roles that define access privileges to the services that your organization uses.

As an organization administrator, you can assign predefined roles to users and user groups based on the business need. Some asset permissions and feature privileges are enabled by default for predefined user roles. You cannot modify, rename, or delete system-defined roles.

The topics in this section explain the predefined roles that are available in Data Marketplace and the default feature permissions and privileges for each role.

Data Marketplace User

A Data User is a user that wants to use a data collection that is published to Data Marketplace. As a Data User, you can search for data collections that are published to Data Marketplace. To gain access to a collection, you must place an order. If an existing collection doesn't meet your requirements, you can submit a request for a new data collection. Any user in Data Marketplace can be a Data User.

I am a Data User. What can I do?

The following table lists the tasks that a Data User can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
View data collection details	See "Data collections" on page 58.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or cancel a data collection request that was submitted by you	See the *Viewing your requested data collections* topic in the *Working with Data Collections* help module.
View or request withdrawal of your consumer access to a data collection	See the *Consumer accesses* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Data User role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled

Features	Status
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled
View Set up page	Disabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following list descibes the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Data User role using the **Data Marketplace User** user role policy:

Condition	Permissions
Asset Type Is Any of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Target - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Category And Category Status Is Active	Read
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Any Of - Order - Request New Data Collection	Create, Read, Update
Asset Type Is Consumer Access	Read, Update
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read

Condition	Permissions
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

Data Marketplace Data Collection Owner

As a Data Owner, you are responsible for a data collection in Data Marketplace. You publish or unpublish the collections for which you are responsible. You are also responsible for selecting the data assets that comprise your data collection.

I am a Data Owner. What can I do?

The following table lists the tasks that a Data Owner of a data collection can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access to which you are tagged	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Bulk create data collections	See the *Bulk Create Items* help module.
Bulk create relationships between terms of use and data collections, or between data assets and data collections	See the *Bulk Create Items* help module.
Create a new data collection, modify or delete a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Create, modify or delete the delivery targets of a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove terms of use from a data collection where you are a stakeholder.	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove data assets from a data collection where you are a stakeholder	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Link or unlink a data collection from a data collection	See the *Linking data collections* topic in the *Working with Data Collections* help module.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.

Task	Topic
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access or for which you are responsible	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View, approve or reject an order for a data collection	See the *Orders* topic in the *Working with Data Collections* help module.
View or respond to a new data collection request against a data collection	See the *Responding to requests for new data collections* topic in the *Working with Data Collections* help module.
View or request withdrawal of a consumer access to a data collection	See the *Consumer accesses* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the **Data Marketplace Data Collection Owner** user role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Enabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Enabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled
View Set up page	Disabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Data Owner role using the **Data Marketplace Data Collection Owner** user role policy:

Condition	Permissions
Asset Type Is Any Of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Delivery Target	Create, Read
Asset Type Is Category And Category Status Is Active	Read
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Data Collection	Create, Manage Access, Update
Asset Type Is Any Of - Order - Request New Data Collection	Create
Asset Type Is Consumer Access	Read
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

If a user with the Data Owner user role is assigned as a stakeholder of a data collection, the system assigns the user additional permissions that are specific to the respective data collection and the data within it.

The following table lists the asset permissions pertaining to the data collection and the data within it that are enabled by default in Metadata Command Center for the Data Owner stakeholder role using the **Data Marketplace Data Collection Owner** stakeholder role policy:

Condition	Permissions
Asset Type Is Delivery Target	Create, Delete, Manage Access, Read, Update
Asset Type Is Data Collection	Create, Delete, Read, Update
Asset Type Is Any Of - Order - Request New Data Collection	Create, Manage Access, Read, Update
Asset Type Is Consumer Access	Read, Update

Data Marketplace Data Collection Technical Owner

As a Technical Owner of a data collection, you have technical rights to a data collection. You are responsible for delivering data to the Data Users whose orders are approved by the Data Owner.

I am a Technical Owner. What can I do?

The following table lists the tasks that the Technical Owner of a data collection can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access to which you are tagged	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Bulk create relationships between terms of use and data collections, or between delivery targets and data collections	See the *Bulk Create Items* help module.
Modify a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Create, modify or delete the delivery targets of a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove terms of use from a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove data assets from a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.

Task	Topic
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or fulfill an order for a data collection	See the *Orders* topic in the *Working with Data Collections* help module.
View, request withdrawal or withdraw a consumer access to a data collection	See the *Consumer accesses* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Technical Owner role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Enabled
View Set up page	Disabled
Withdraw Consumer Accesses	Enabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Technical Owner role using the **Data Marketplace Data Collection Technical Owner** user role policy:

Condition	Permissions
Asset Type Is Any Of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Category And Category Status Is Active	Read
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Any Of - Consumer Access - Delivery Target	Create, Read
Asset Type Is Any Of - Order - Request New Data Collection	Create
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

If a user with the Technical Owner user role is assigned as a stakeholder of a data collection, the system assigns the user additional permissions that are specific to the respective data collection and the data within it.

The following table lists the asset permissions pertaining to the data collection and the data within it that are enabled by default in Metadata Command Center for the Technical Owner stakeholder role using the **Data Marketplace Data Collection Technical Owner** stakeholder role policy:

Condition	Permissions
Asset Type Is Data Collection	Manage Access, Read, Update
Asset Type Is Delivery Target	Create, Delete, Read, Update
Asset Type Is Any Of - Consumer Access - Order - Request New Data Collection	Create, Manage Access, Read, Update

Data Marketplace Delivery Template Owner

As a Delivery Owner, you manage the delivery option that is used to deliver data collections. If a Technical Owner requires assistance with using a specific delivery option for which you are responsible, they can reach out to you for support with the data delivery. In the absence of the Technical Owner, you can also fulfil orders for data collections that use the delivery option that is managed by you.

I am a Delivery Owner. What can I do?

The following table lists the tasks that the Delivery Owner can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access to which you are tagged	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page or of the **Setup** page	See "Collaboration in Data Marketplace" on page 90.
Bulk create delivery formats, delivery methods or delivery templates	See the *Bulk Create Items* help module.
Create or modify delivery options	See the *Delivery options* topic in the *Set Up Data Marketplace* help module.
Search for a published data collection	See the *Search and view for data collections* topic in the *Working with Data Collections* help module.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Delivery Owner role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled
View Set up page	Enabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Delivery Owner role using the **Data Marketplace Delivery Template Owner** user role policy:

Condition	Permissions
Asset Type Is Any Of - Category - Cost Center - Data Asset - Data Element - Delivery Target - Terms of Use - Usage Context	Read
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Any Of - Delivery Format - Delivery Method	Create, Read, Update
Asset Type Is Any Of - Delivery Template - Order - Request New Data Collection	Create, Manage Access, Read, Update
Asset Type Is Consumer Access	Read, Update

Condition	Permissions
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

If a user with the Delivery Owner user role is assigned as a stakeholder of a delivery template, the system assigns the user additional permissions that are specific to the respective delivery template.

The following table lists the asset permissions pertaining to the delivery template that are enabled by default in Metadata Command Center for the Delivery Owner stakeholder role using the **Data Marketplace Delivery Template Owner** stakeholder role policy:

Condition	Permissions
Asset Type Is Delivery Template	Create, Manage Access, Update

Data Marketplace Category Owner

As a Category Owner, you are responsible for a category in Data Marketplace. You can modify the summary of a category for which you are responsible and can also perform some operations on the data collections within the category.

I am a Category Owner. What can I do?

The following table lists the tasks that a Category Owner can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access to which you are tagged	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Bulk create categories or bulk create data collections within the categories for which you are responsible	See the *Bulk Create Items* help module.
Create a new category, modify or delete a category where you are a stakeholder	See the *Categories* topic in the *Set Up Data Marketplace* help module.

Task	Topic
Create, modify or delete a data collection in a category where you are a stakeholder	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Create, modify or delete the delivery targets of a data collection where you are a stakeholder	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove terms of use from a data collection in a category where you are a stakeholder	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove data assets from a data collection in a category where you are a stakeholder	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Link or unlink data collections in a category	See the *Linking data collections* topic in the *Working with Data Collections* help module.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or respond to a new data collection request in a category	See the *Responding to requests for new data collections* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Category Owner role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Enabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Enabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Enabled

Features	Status
View Set up page	Disabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Category Owner role using the **Data Marketplace Category Owner** user role policy:

Condition	Permissions
Asset Type Is Category	Create, Manage Access, Update
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Data Collection	Create, Manage Access, Update
Asset Type Is Delivery Target	Create, Read
Asset Type Is Any Of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Any Of - Order - Request New Data Collection	Create
Asset Type Is Consumer Access	Read
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

If a user with the Category Owner user role is assigned as a stakeholder of a category, the system assigns the user additional permissions that are specific to the respective category and the data within it.

The following table lists the asset permissions pertaining to the category and the data within it that are enabled by default in Metadata Command Center for the Category Owner stakeholder role using the **Data Marketplace Category Owner** stakeholder role policy:

Condition	Permissions
Asset Type Is Any Of - Category - Data Collection	Create, Delete, Manage Access, Read, Update
Asset Type Is Delivery Target	Create, Delete, Read, Update
Asset Type Is Any Of - Order - Request New Data Collection	Create, Manage Access, Read, Update
Asset Type Is Consumer Access	Read, Update

Data Marketplace Technical Administrator

As a Technical Administrator, you are responsible for all the technical administrative tasks in Data Marketplace. Technical administrative tasks might include managing delivery options, specifying the general terms of use, and managing the various settings in Data Marketplace.

I am a Technical Administrator. What can I do?

The following table lists the tasks that the Technical Administrator of Data Marketplace can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access to which you are tagged	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page or of the **Setup** page	See "Collaboration in Data Marketplace" on page 90.
Customize the Data Marketplace interface	See the *Interface Customization* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a page layout	See the *Design a page layout* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete an item tooltip	See the *Create an item tooltip* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a Guide Me panel	See the *Customize the Guide Me panel* topic in the *Set Up Data Marketplace* help module.
Modify the labels of Data Marketplace objects	See the *Label customizations* topic in the *Set Up Data Marketplace* help module.

Task	Topic
Configure Star Owners	See the *Star Owner* topic in the *Set Up Data Marketplace* help module.
Configure advanced search	See the *Advanced Search* topic in the *Set Up Data Marketplace* help module.
Bulk create cost centers, delivery formats, delivery methods, delivery templates, data elements, data assets or consumer accesses	See the *Bulk Create Items* help module.
Bulk create relationships between terms of use and data collections, or between delivery targets and data collections	See the *Bulk Create Items* help module.
Create or modify delivery options	See the *Delivery options* topic in the *Set Up Data Marketplace* help module.
Modify the general terms of use	See the *Viewing and modifying general terms of use* topic in the *Set Up Data Marketplace* help module.
Create or modify a terms of use	See the *Terms of use* topic in the *Set Up Data Marketplace* help module.
Modify terms of use type	See the *Terms of use* topic in the *Set Up Data Marketplace* help module.
Create or modify a cost center	See the *Cost center* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a data asset	See the *Data assets* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a data element of a data asset	See the *Data assets* topic in the *Set Up Data Marketplace* help module.
Configure the types of assets that can be imported from Data Governance and Catalog	See the *Integrate Data Marketplace with Data Governance and Catalog* topic in the *Set Up Data Marketplace* help module.
Modify a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Create, modify or delete the delivery targets of a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove terms of use from a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove data assets from a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Search for a published or an unpublished data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.

Task	Topic
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or fulfill an order	See the *Orders* topic in the *Working with Data Collections* help module.
View, request withdrawal or withdraw a consumer access	See the *Consumer accesses* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Technical Administrator role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Enabled
Fulfill Or Reject Orders	Enabled
View Set up page	Enabled
Withdraw Consumer Accesses	Enabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Technical Administrator role using the **Data Marketplace Technical Administrator** user role policy:

Condition	Permissions
Asset Type Is Any Of - Category - Usage Context	Read
Asset Type Is Data Collection	Read, Update

Condition	Permissions
Asset Type Is Any Of - Data Asset - Data Element - Delivery Target And Category Status Is Active	Create, Delete, Read, Update
Asset Type Is Any Of - Cost Center - Delivery Format - Delivery Method - Terms of Use And Data Collection Status Is Active	Create, Manage Access, Read, Update
Asset Type Is Any Of - Consumer Access - Delivery Template - Order - Request New Data Collection	Create, Manage Access, Read, Update
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

Data Marketplace Administrator

As a Data Marketplace Administrator, you are responsible for configuring Data Marketplace. You can perform all administrative tasks that are relevant to Data Marketplace.

I am a Data Marketplace Administrator. What can I do?

The following table lists the tasks that the Data Marketplace Administrator can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page or of the **Setup** page	See "Collaboration in Data Marketplace" on page 90.
Customize the Data Marketplace interface	See the *Interface Customization* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a page layout	See the *Design a page layout* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete an item tooltip	See the *Create an item tooltip* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a Guide Me panel	See the *Customize the Guide Me panel* topic in the *Set Up Data Marketplace* help module.
Modify the labels of Data Marketplace objects	See the *Label customizations* topic in the *Set Up Data Marketplace* help module.
Configure Star Owners	See the *Star Owner* topic in the *Set Up Data Marketplace* help module.
Configure advanced search	See the *Advanced Search* topic in the *Set Up Data Marketplace* help module.
Bulk create items	See the *Bulk Create Items* help module.
Create or modify delivery options	See the *Delivery options* topic in the *Set Up Data Marketplace* help module.
Modify the general terms of use	See the *Viewing and modifying general terms of use* topic in the *Set Up Data Marketplace* help module.
Create or modify a terms of use	See the *Terms of use* topic in the *Set Up Data Marketplace* help module.
Modify terms of use type	See the *Terms of use* topic in the *Set Up Data Marketplace* help module.
Create or modify a usage type	See the *Usage types* topic in the *Set Up Data Marketplace* help module.
Create or modify a cost center	See the *Cost center* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a category	See the *Categories* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a data asset	See the *Data assets* topic in the *Set Up Data Marketplace* help module.

Task	Topic
Create, modify or delete a data element of a data asset	See the *Data assets* topic in the *Set Up Data Marketplace* help module.
Configure the types of assets that can be imported from Data Governance and Catalog	See the *Integrate Data Marketplace with Data Governance and Catalog* topic in the *Set Up Data Marketplace* help module.
Create, modify or delete a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Create, modify or delete the delivery targets of a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove terms of use from a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Add or remove data assets from a data collection	See the *Manage data collections* topic in the *Working with Data Collections* help module.
Link or unlink data collections	See the *Linking data collections* topic in the *Working with Data Collections* help module.
Search for a published or an unpublished data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View, approve, fulfill or reject an order	See the *Orders* topic in the *Working with Data Collections* help module.
View or respond to a new data collection request	See the *Responding to requests for new data collections* topic in the *Working with Data Collections* help module.
View, request withdrawal or withdraw a consumer access	See the *Consumer accesses* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Data Marketplace Administrator role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Enabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Enabled
Configure And Manage Data Marketplace	Enabled
Fulfill Or Reject Orders	Enabled
View Set up page	Enabled
Withdraw Consumer Accesses	Enabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Data Marketplace Administrator role using the **Data Marketplace Administrator** user role policy:

Condition	Permissions
Asset Type Is Any Of - Data Asset - Data Element - Delivery Target	Create, Delete, Read, Update
Asset Type Is Any Of - Cost Center - Delivery Format - Delivery Method - Terms of Use	Create, Read, Update
Asset Type Is Any Of - Consumer Access - Delivery Template - Order - Request New Data Collection	Create, Manage Access, Read, Update
Asset Type Is Any Business Asset And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read

Condition	Permissions
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read

Governance User

A user with the Governance User role for Data Governance and Catalog is also able to use a data collection that is published to Data Marketplace. As a Governance User, you can search for data collections that are published to Data Marketplace. To gain access to a collection, you must place an order. If an existing collection doesn't meet your requirements, you can submit a request for a new data collection.

I am a Governance User. What can I do?

The following table lists the tasks that a Governance User can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
View data collection details	See "Data collections" on page 58.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or cancel a data collection request that was submitted by you	See the *Viewing your requested data collections* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Governance User role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled
View Set up page	Disabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Governance User role using the **Governance User** user role policy:

Condition	Permissions
Asset Type Is Any Business And Lifecycle Is Published	Read
Asset Type Is Any Technical Asset And Lifecycle Is Published	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read
Asset Type Is Data Classifications	Read
Asset Type Is Any Of - Order - Request New Data Collection	Create, Read, Update
Asset Type Is Category And Category Status Is Active	Read

Condition	Permissions
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Any Of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Target - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Any Data Access Asset And Lifecycle Is Published	Read

Governance Owner

A user with the Governance Owner role for Data Governance and Catalog is also able to use a data collection that is published to Data Marketplace. As a Governance Owner, you can search for data collections that are published to Data Marketplace. To gain access to a collection, you must place an order. If an existing collection doesn't meet your requirements, you can submit a request for a new data collection.

I am a Governance Owner. What can I do?

The following table lists the tasks that a Governance Owner can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
View data collection details	See "Data collections" on page 58.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.

Task	Topic
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or cancel a data collection request that was submitted by you	See the *Viewing your requested data collections* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Governance Owner role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled
View Set up page	Disabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Governance Owner role using the **Governance Owner** user role policy:

Condition	Permissions
Asset Type Is Any Business Asset	Create, Delete, Manage Access, Read, Update
Asset Type Is Any Technical Asset	Manage Access, Read, Update
Asset Type Is Data Classifications	Read
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read
Attribute Group Is Code And Asset Type Is Any Technical Asset	Read

Condition	Permissions
Attribute Group Is Data And Asset Type Is Any Technical Asset	Read
Attribute Group Is Unpublished Changes And Asset Type Is Any Asset	Read, Update
Asset Type Is Category And Category Status Is Active	Read
Asset Type Is Data Collection And Data Collection Status Is Published	Read
Asset Type Is Any Of - Order - Request New Data Collection	Create, Read, Update
Asset Type Is Any Of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Target - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Data Quality Rule Occurences	Execute
Asset Type Is Any Data Access Asset And Lifecycle Is Published	Read

Governance Administrator

A user with the Governance Administrator role for Data Governance and Catalog is also able to use a data collection that is published to Data Marketplace. As a Governance Administrator, you can search for data

collections that are published to Data Marketplace. To gain access to a collection, you must place an order. If an existing collection doesn't meet your requirements, you can submit a request for a new data collection.

I am a Governance Administrator. What can I do?

The following table lists the tasks that a Governance Administrator can do:

Task	Topic
Add comments to the **Timeline** section of an order, a data collection request or a consumer access	See the *Working with Data Collections* help module.
Message other Data Marketplace users in the **Chat** panel of an object page	See "Collaboration in Data Marketplace" on page 90.
Search for a published data collection	See the *Search and view data collections* topic in the *Working with Data Collections* help module.
View data collection details	See "Data collections" on page 58.
Compare data collections	See the *Compare data collections* topic in the *Working with Data Collections* help module.
Order a data collection	See the *Order data collections* topic in the *Working with Data Collections* help module.
Rate a data collection for which you have received access	See the *Rating data collections* topic in the *Working with Data Collections* help module.
Request a new data collection	See the *Requesting new data collections* topic in the *Working with Data Collections* help module.
View or cancel a data collection request that was submitted by you	See the *Viewing your requested data collections* topic in the *Working with Data Collections* help module.

Default feature privileges

The following table lists the feature privileges on the IDMC Administrator's **User Roles** page that are enabled by default for the Governance Administrator role:

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Enabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled

Features	Status
View Set up page	Disabled
Withdraw Consumer Accesses	Disabled

Default asset permissions

The following table lists the asset permissions pertaining to Data Marketplace that are enabled by default in Metadata Command Center for the Governance Administrator role using the **Governance Administrator** user role policy:

Condition	Permissions
Asset Type Is Any Business Asset	Create, Delete, Manage Access, Read, Update
Asset Type Is Any Technical Asset	Manage Access, Read, Update
Asset Type Is All Catalog Sources	Create, Delete Read, Update
Asset Type Is Data Classifications	Create, Delete Read, Update
Attribute Group Is Profiling And Asset Type Is Any Technical Asset	Read
Attribute Group Is Code And Asset Type Is Any Technical Asset	Read
Attribute Group Is Data And Asset Type Is Any Technical Asset	Read
Attribute Group Is Unpublished Changes And Asset Type Is Any Asset	Read, Update
Asset Type Is Category And Category Status Is Active	Read
Asset Type Is Data Collection And Data Collection Status Is Publishedi w	Read
Asset Type Is Any Of - Order - Request New Data Collection	Create, Read, Update

Condition	Permissions
Asset Type Is Any Of - Cost Center - Data Asset - Data Element - Delivery Format - Delivery Method - Delivery Target - Delivery Template - Terms of Use - Usage Context	Read
Asset Type Is Data Quality Rule Occurences	Execute
Asset Type Is Any Data Access Asset And Lifecycle Is Published	Read

Custom roles

In addition to assigning predefined roles to users, you can also create and assign custom roles based on the needs of your organization.

You can create a custom role according to your business requirements by granting it the appropriate feature privileges from Administrator and permissions from Metadata Command Center. You can also edit or delete custom roles. For more information about creating custom roles in IDMC Administrator, see the *User Administration* help in Administrator.

Example of custom role - Data Auditor

For example, if you want to verify that the orders for data collections comply with the policies defined for your organization, you can create a custom role called Data Auditor that has only read permission on data collections, orders, consumer accesses and data assets but doesn't have permissions to modify or delete any data.

Key responsibilities

In a typical organization, a Data Auditor might have the following responsibilities:

- Verify that the data complies with the data policies of your country and of the countries of your customers.
- Verify that the data complies with your organization's internal data policies.
- Verify security and privacy of the data.
- Generate unbiased audit findings that allow management to make informed decisions.
- Verify the validity of the expense reports pertaining to data management.

Feature privileges in Administrator

After you define the user role in Administrator, you must assign it the appropriate feature privileges.

The following table lists the feature privileges that you can enable in Administrator for the Data Auditor role based on the key responsibilities :

Features	Status
Access Data Marketplace	Enabled
Approve or Reject Orders	Disabled
Cancel Your Orders And Data Collection Requests	Disabled
Complete or Reject Data Collection Requests	Disabled
Configure And Manage Data Marketplace	Disabled
Fulfill Or Reject Orders	Disabled
View Set up page	Enabled
Withdraw Consumer Accesses	Disabled

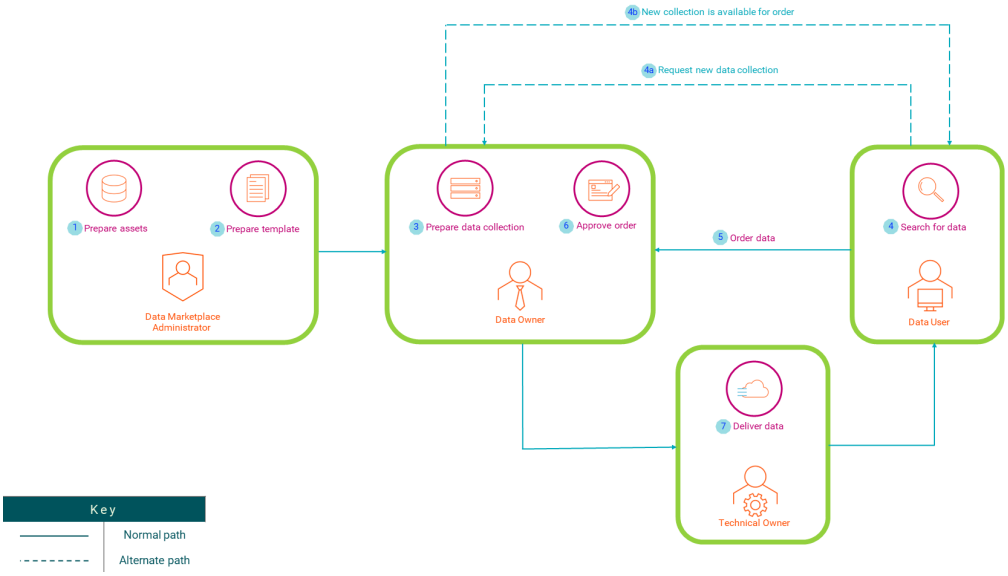

Asset permissions in Metadata Command Center

On the **Access Control** tab of Metadata Command Center, create a new access policy that grants the role **Read** permissions on all the options under the **Marketplace Asset** section.

CHAPTER 3

How Data Marketplace works

The following image shows the workflow to publish and get access to data in Data Marketplace:

The following steps describe how different roles interact with data and each other in Data Marketplace:

1. The Data Marketplace Administrator prepares the data assets that Data Owners use to create data collections.
2. The Data Marketplace Administrator also prepares the delivery templates that Data Owners use to create delivery targets for their data collections.
3. The Data Owner uses the data assets to create and publish a data collection.
4. The Data User searches Data Marketplace to find a data collection that meets their requirements. If the Data User is unable to find a data collection that meets their requirements, they can request for the creation of a new data collection. The Data Owner creates a new data collection in response to the data collection request.
5. After the Data User finds the relevant data collection, they place an order to gain access to the data.
6. The Data Owner reviews the order and approves it.
7. After the Data owner approves the order, the Technical Owner delivers the data to the Data User.

Note: The process flow is illustrated for predefined Data Marketplace roles.

Business example

In an organization that manufactures small cars, Steve is the data steward for the marketing team. The marketing team analyzes the market and creates a chart for demand trends. Steve maintains his team's research data in a shared FTP folder that his marketing team can access. The marketing team decides to make the data for demand trends available to the other teams in the organization. Steve identifies the data assets that might be useful to the other teams, and creates the relevant terms of use for the data assets. The data is now ready for use by other business teams in the organization. Steve is the owner of the data.

The data owner or the Data Marketplace Administrator publishes the data assets to the 'Demand Trends' data collection within the 'Marketing' category in Data Marketplace. Steve also adds a descriptive note to the data collection, so that other users of Data Marketplace can find it.

Jane is an operations manager in the organization. She wants to analyze the customer demand for cars, so that she can identify seasonal patterns and adjust the volume of production. She searches for "demand" in Data Marketplace, and sees the "Demand Trends" data collection that the Data Marketplace Administrator or the data owner had published. Jane selects the data collection, views the list of data assets, and decides that she needs this data for her analysis. Jane is the data user.

Jane uses the checkout process in Data Marketplace to request access to the data. She also selects the preferred delivery target to procure the required data. Steve can see in Data Marketplace that Jane wants access to the data. Steve approves Jane's request.

Peter is the Data Marketplace Administrator for the marketing team. Sometimes administrators might also be the Technical Owner for a data collection. Peter can see that Steve has approved Jane's request. Peter grants Jane access to the data. After delivering the data to Jane, Peter marks the order as fulfilled in Data Marketplace.

The order is now fulfilled. Data Marketplace maintains a history of this order. Jane can use the demand trend charts to optimize the inventory, avoid wastage, and reduce costs. The consumer access is a record that indicates Jane's access to the data collection. After the analysis is complete, Jane can inform Steve that she no longer needs access to the data. Steve revokes Jane's access, and Peter can remove Jane's access to the data.

Note: The preceding example uses the predefined roles for Data Marketplace.

Terms used in Data Marketplace

When you search for data assets in Data Marketplace, you must use certain terms to identify assets.

The following table describes the terms that you use while searching for data assets in Data Marketplace:

Terms	Description
Bulk create	A feature that a Data Marketplace Administrator uses to create multiple data assets at once.
Category	A category is a grouping of related data collections. It is a predefined classification where stakeholders can publish the data collections for which they are responsible. For example, if a Data Marketplace Administrator wants to publish employee policy documents to the Data Marketplace, the most suitable category for the documents might be "Human Resources".

Terms	Description
Checkout	The steps taken by a Data User to order a data collection. To use a data collection, a Data User submits an order for it. The stakeholder of the ordered data collection verifies the compliance parameters, approves the Data User's request to access the data collection.
Consumer access	A record that indicates a Data User's access to a data collection, along with other details such as the date of delivery, details of the stakeholder that delivered the data, and the delivery option that was used for the delivery.
Data asset	A representation of data in an organization. Data assets might contain relevant data elements and are contained in one or more data collections.
Data collection	A data collection is a grouping of one or more data assets. If a Data User requires access to a data collection, the user can place an order for the data collection. For example, the HR team in an organization publishes all employee policy documents to the Data Marketplace as an "Employee Claims Made to the Company Health Plan" collection.
Data element	A data element is the smallest unit of data that is present in Data Marketplace. A grouping of one or more related data elements forms a data asset.
Delivery target	A delivery target is delivery option that a stakeholder of a data collection can use to deliver data to a Data User. Stakeholders use delivery templates to create new delivery targets for their data collections. For example, a stakeholder for a collection of XML files can specify the XML format and HTTPS method as the data collection's delivery target, with the location being "https://company.com/datawarehouse/XMLFiles".
Delivery template	A delivery template contains the delivery format, the delivery method, and the location where the data is delivered to the Data User. The Delivery Owner creates and manages the delivery templates. For example, the Delivery Owner can create a delivery template with the delivery format as XML and the delivery method as HTTPS, accessible at "https://company.com/datawarehouse".
Fulfillment	The process utilized to provide a Data User access to the requested data.
Order	An order is a request made by a Data User to gain access to a data collection. A Data User's order is reviewed by the stakeholders of the data collection who are responsible for the approval and fulfillment of the order.
Terms of use	The terms of use provide usage requirements and guidelines that a Data User must accept to use the data.
Usage type	A usage type defines the contexts within which an individual can use data. Stakeholders can utilize usage types to specify the intended use of their data collections. Data Users can utilize usage types to cite their intention when they order a collection.

Home page

After you log in, Data Marketplace displays the **Home** page.

By default, Data Marketplace opens the **General** layout for the **Home** page. If you are assigned a predefined Data Marketplace role, you can also view an alternate layout for the **Home** page with widgets tailored to your

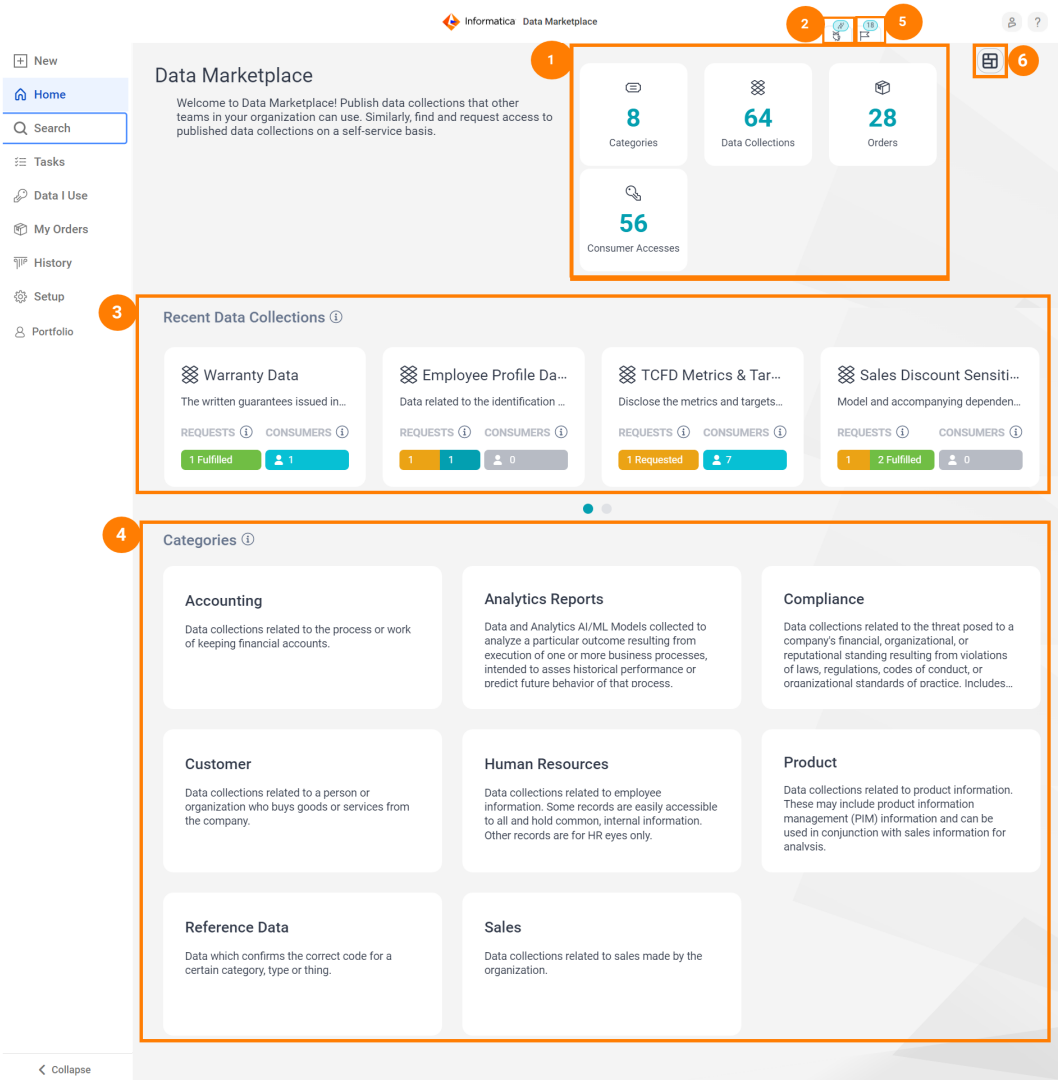

role. Your administrator might choose to further customize the **Home** page by creating a different layout for the page.

You can use the **Switch Layout** icon to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

General Home page

On **General** layout for the **Home** page, you can view the total number of categories, data collections, orders and consumer accesses that are available in Data Marketplace.

The following image shows the **General** layout for the Data Marketplace **Home** page:

1. You can view the total number of categories, data collections, consumer accesses that are available in Data Marketplace.
2. To view your notifications and the actions that you need to perform, click the **Notifications** icon.
3. In the **Recent Data Collections** carousel, you can view the most recently created data collections. To view the details of a data collection, click the data collection. For more information about data collections, see "Data collections" on page 58.

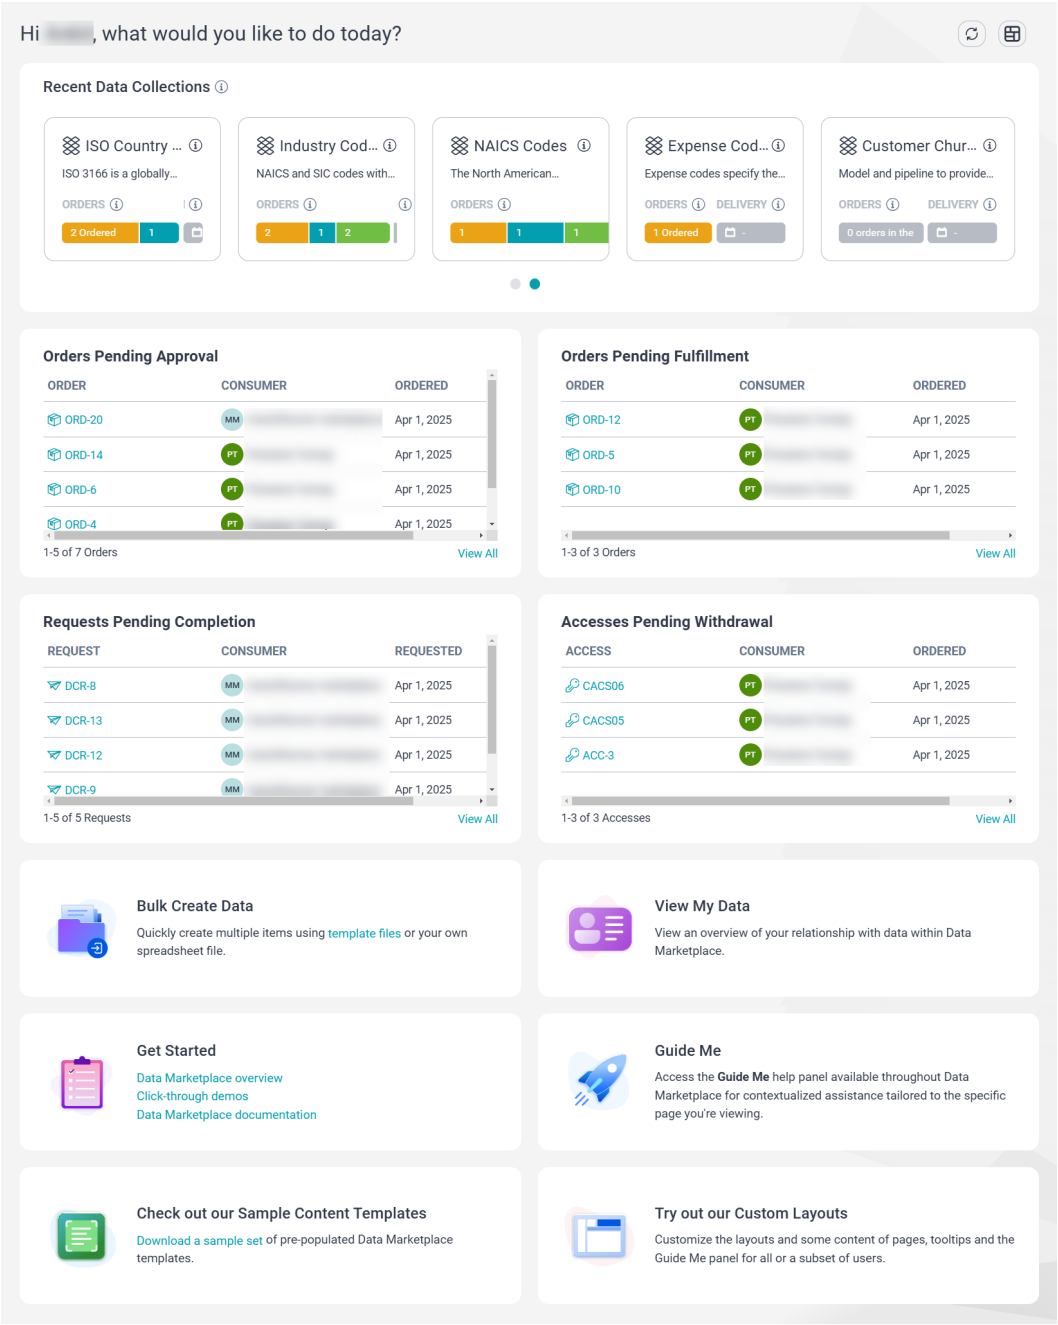

4. In the **Categories** section, you can view all active root categories.
   To view the details of a category, click a category. For more information about categories, see "Categories" on page 53.
5. To familiarize yourself with the page that you are viewing, click the **Guide Me** icon to open the **Guide** panel. The **Guide** panel provides an overview on the page that you are viewing. For more information, see "Guide Me panel" on page 52.
6. To switch between the layouts to view a different presentation of information on each layout, use the **Switch Layout** icon.

Your Home page

The **Home** page has predefined layouts, with widgets tailored uniquely to each Data Marketplace role. The personalized selection of widgets on these predefined layouts equips each user with the tools and information specific to their role's requirements. If you don't define data collections in Data Marketplace, the **Home** page displays predefined layouts featuring unique widgets.

For example, if you are an administrator who is getting started with setting up an empty Data Marketplace, the predefined layout available to you will display widgets tailored to help you to set up Data Marketplace for your organization. Alternatively, as a stakeholder of a data collection, you'll interact with a distinct set of widgets that allow you to respond to tasks assigned to you. As a consumer, you will be given widgets that allow you to search for data or track your orders and consumer accesses.

The following image shows an example of the **Home** page for a Data Marketplace Administrator:

By default, a unique layout is assigned to each predefined role in Data Marketplace. Each layout has its own unique set of widgets. The set of widgets that are displayed in each layout also depend on whether or not data is added to Data Marketplace.

The following table describes the predefined layouts that are available in Data Marketplace, and lists the widgets that are displayed in each layout:

Layout Name	Associated Role	Widgets
Marketplace User Default Layout	"Data Marketplace User" on page 11	You can view the following widgets only when there is data in your Data Marketplace: - Search for Data Collections - My Orders - My Accesses - Count of Categories - Count of Data Collections - Count of My Orders - Count of My Accesses - Count of My Requests - Welcome to Data Marketplace - Find data with Informatica Cloud Data Marketplace - What am I using data for? - Where am I using data? - Explore Data Marketplace Learning Path You can view the following widgets only when there is no data in your Data Marketplace: - Managing data community - Understanding Marketplace Links - Review Best Practices eBook - Getting Started - Guide Me - Explore Data Marketplace Learning Path
Data Collection Owner Default Layout	" Data Marketplace Data Collection Owner" on page 13	You can view the following widgets regardless of whether there is any data in your Data Marketplace: - Create Data Collections - Bulk Create Data - Getting Started - Guide Me - Explore Data Marketplace Learning Path You can view the following widgets only when there is data in your Data Marketplace: - Find data with Informatica Cloud Data Marketplace - Orders Pending Approval - Requests Pending Completion - Count of Categories - Count of Data Collections - Overview of Orders - Overview of Requests - Overview of Accesses - Welcome to Data Marketplace - Understanding Marketplace Links

Layout Name	Associated Role	Widgets
		You can view the following widgets only when there is no data in your Data Marketplace: - Managing data community - Review Best Practices eBook
Technical Data Collection Owner Default Layout	"Data Marketplace Data Collection Technical Owner" on page 16	You can view the following widgets regardless of whether there is any data in your Data Marketplace: - Bulk Create Data - Understanding Marketplace Links - Getting Started - Guide Me - Explore Data Marketplace Learning Path You can view the following widgets only when there is data in your Data Marketplace: - Find data with Informatica Cloud Data Marketplace - Orders Pending Fulfillment - Accesses Pending Withdrawal - Count of Categories - Count of Data Collections - Overview of Orders - Overview of Accesses You can view the following widgets only when there is no data in your Data Marketplace: - Managing data community - Review Best Practices eBook

Layout Name	Associated Role	Widgets
Category Owner Default Layout	" Data Marketplace Category Owner" on page 21	You can view the following widgets regardless of whether there is any data in your Data Marketplace: - Create Categories - Bulk Create Data - Getting Started - Guide Me - Explore Data Marketplace Learning Path You can view the following widgets only when there is data in your Data Marketplace: - Find data with Informatica Cloud Data Marketplace - Orders Pending Approval - Requests Pending Completion - Count of Categories - Count of Data Collections - Overview of Orders - Overview of Requests - Overview of Accesses - Welcome to Data Marketplace - Understanding Marketplace Links You can view the following widgets only when there is no data in your Data Marketplace: - Managing data community - Review Best Practices eBook
Delivery Template Owner Default Layout	" Data Marketplace Delivery Template Owner" on page 19	You can view the following widgets regardless of whether there is any data in your Data Marketplace: - Set Up Delivery Options. - Bulk Create Data - Getting Started - Guide Me - Explore Data Marketplace Learning Path You can view the following widgets only when there is data in your Data Marketplace: - Find data with Informatica Cloud Data Marketplace - Welcome to Data Marketplace - Understanding Marketplace Links You can view the following widgets only when there is no data in your Data Marketplace: - Managing data community - Review Best Practices eBook

Layout Name	Associated Role	Widgets
Technical Administrator Default Layout	"Data Marketplace Technical Administrator" on page 24	You can view the following widgets regardless of whether there is any data in your Data Marketplace: - Bulk Create Data - Getting Started - Guide Me - Check out our Sample Content Templates - Try out our Custom Layouts You can view the following widgets only when there is data in your Data Marketplace: - Overview of Orders - Overview of Accesses - Recent Data Collections - Accesses Pending Withdrawal - Orders Pending Fulfillment - View My Data You can view the following widgets only when there is no data in your Data Marketplace: - Set Up Data Assets and Elements - Configure Data Marketplace - Setup the Look and Feel - Set Up Delivery Options - Bulk Create Consumer Accesses - Review Best Practices eBook
Administrator Default Layout	"Data Marketplace Administrator" on page 28	You can view the following widgets regardless of whether there is any data in your Data Marketplace: - Getting Started - Guide Me - Check out our Sample Content Templates - Try out our Custom Layouts You can view the following widgets only when there is data in your Data Marketplace: - Overview of Orders - Overview of Requests - Overview of Accesses - Recent Data Collections - Orders Pending Approval - Orders Pending Fulfillment - Requests Pending Completion - Accesses Pending Withdrawal - Bulk Create Data - View My Data You can view the following widgets only when there is no data in your Data Marketplace: - Set Up Data Assets and Elements - Configure Data Marketplace - Setup the Look and Feel - Create Categories - Create Data Collections

Layout Name	Associated Role	Widgets
		- Set Up Delivery Options. - Create Terms of Use - Review Best Practices eBook

The following table describes the widgets that are displayed on the **Home** page:

Widget Name	Description
Accesses Pending Withdrawal	An overview of consumer accesses in Data Marketplace that are to be withdrawn.
Bulk Create Consumer Accesses	Use bulk create template files to create multiple consumer accesses at once.
Bulk Create Data	Use bulk create template files to create multiple items at once.
Check out our Sample Content Templates	Download a sample set of pre-populated templates that you can use quickly create items in Data Marketplace.
Configure Data Marketplace	Open the **Setup** > **Configuration** tab where you can configure components of the Data Marketplace experience. This includes defining usage types, adding cost centers, and so on.
Count of Categories	Number of categories that you are authorized to view.
Count of Data Collections	Number of data collections that you are authorized to view.
Count of My Orders	Number of orders submitted by you.
Count of My Accesses	Number of consumer accesses that you have on data collections.
Count of My Requests	Number of data collection requests submitted by you.
Create Categories	Create a category directly from the interface. Optionally, use a bulk create template file to quickly create multiple categories.
Create Data Collections	Create a data collection directly from the interface. Optionally, use a bulk create template file to quickly create multiple data collections.
Create Terms of Use	Opens the **Setup** > **Terms of Use** tab where you can create terms of use directly from the interface. Optionally, use a bulk create template file to quickly create multiple terms of use.
Explore Data Marketplace Learning Path	The learning path is designed to equip you with the skills needed to effectively utilize Data Marketplace for your organization.
Find data with Informatica Cloud Data Marketplace	A series of short videos to help you become familiar with the Data Marketplace and its key concepts.
Getting Started	A set of links to resources that can help you familiarize yourself with Data Marketplace.
Guide Me	The **Guide Me** is a help panel that is available on all pages in Data Marketplace. It contains a brief overview of the page that you are viewing.

Widget Name	Description
Managing data community	A video to help stakeholders understand how they can best support their data consumers by actively managing the community.
My Accesses	An overview of your consumer accesses on data collections.
My Orders	An overview of your orders.
Orders Pending Approval	An overview of orders in Data Marketplace that are pending approval.
Orders Pending Fulfillment	An overview of orders in Data Marketplace that are approved for fulfillment.
Overview of Accesses	An overview of consumer accesses that you are authorized to view.
Overview of Orders	An overview of orders that you are authorized to view.
Overview of Requests	An overview of requests for new data collections that you are authorized to view.
Recent Data Collections	The most recently created data collections in Data Marketplace.
Requests Pending Completion	An overview of requests for new data collections in Data Marketplace.
Review Best Practices eBook	An eBook that can help you set up or effectively utilize Data Marketplace for your organization.
Search for Data Collections	Opens the **Search** page where you can search for data in Data Marketplace.
Set Up Data Assets and Elements	Opens the **Setup** > **Integration** tab where you can integrate Data Governance and Catalog with Data Marketplace to allow you to import governed data assets and data elements. Optionally, create data assets and data elements native to Data Marketplace.
Set Up Delivery Options.	Opens the **Setup** > **Delivery** tab where you can create a delivery format, method or template directly from the interface. Optionally, use bulk create template files to quickly create multiple delivery options.
Setup the Look and Feel	Opens the **Setup** > **Look and Feel** tab where you can customize your organization's Data Marketplace experience by adding your logo, modifying the theme colors and more.
Trust data with Informatica Cloud Data Marketplace	A series of short videos to help you become familiar with the Data Marketplace and its key concepts.
Try out our Custom Layouts	Opens the **Setup** > **Layout** tab where you can customize the layouts and some content of pages, tooltips and the Guide Me panel for all or a subset of users.
Understanding Marketplace Links	A set of links to resources that can help you familiarize yourself with Data Marketplace.
View My Data	Opens the **My Data** page where you can view an overview of your relationship with data within Data Marketplace.
Welcome to Data Marketplace	A welcome message for Data Marketplace.

Widget Name	Description
What am I using data for?	A chart that summarizes how you are using data. This chart uses the usage context that you specify when you order the data.
Where am I using data?	A chart that summarizes all of the locations where the data that you ordered was delivered for use.

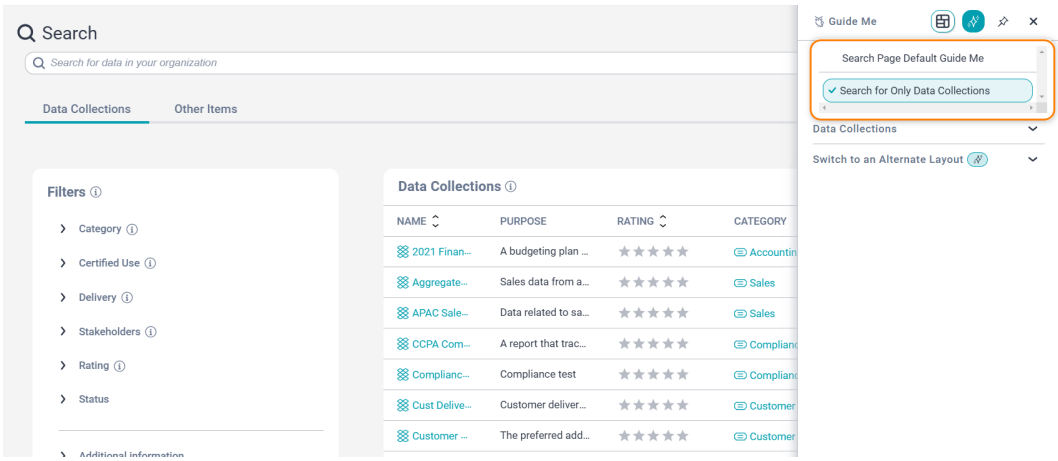

Guide Me panel

The **Guide Me** is a help panel that is available on all pages in Data Marketplace. It contains a brief overview of the page that you are viewing.

To open the help panel, click the **Guide Me** icon. The **Guide Me** panel displays information that is contextual to the page that you are viewing. When new content is added to a panel, Data Marketplace displays the **New content** icon. You can use this icon to identify newly added or recently modified content.

If you are assigned multiple versions of the **Guide Me** panel, you can use the **Switch Layout** icon to switch between each version to see the information available on them.

The following image shows the **Guide Me** panel of the **Search** page:

Create new items

On the **New** page, you can create new items in Data Marketplace.

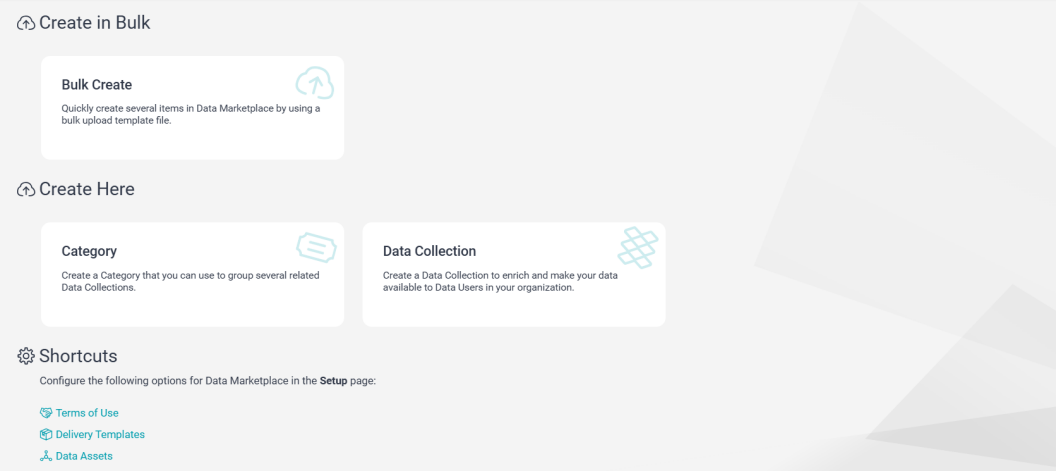

Depending on the permissions of your user profile, the **New** page displays the different options to create Data Marketplace. For more information about object permissions, Chapter 2, “Permissions and privileges for Data Marketplace” on page 8.

You can find the following create options on the **New** page:

- **Bulk Create**. Create multiple items using a predefined CSV, XLXS, or XLS template.

- **Category**. Create a category that groups several related data collections.
- **Data Collection**. Create a data collection and make your data available to Data users.
- **Shortcuts**. Quick links to configure the terms of use, delivery options, and data assets for data collections.

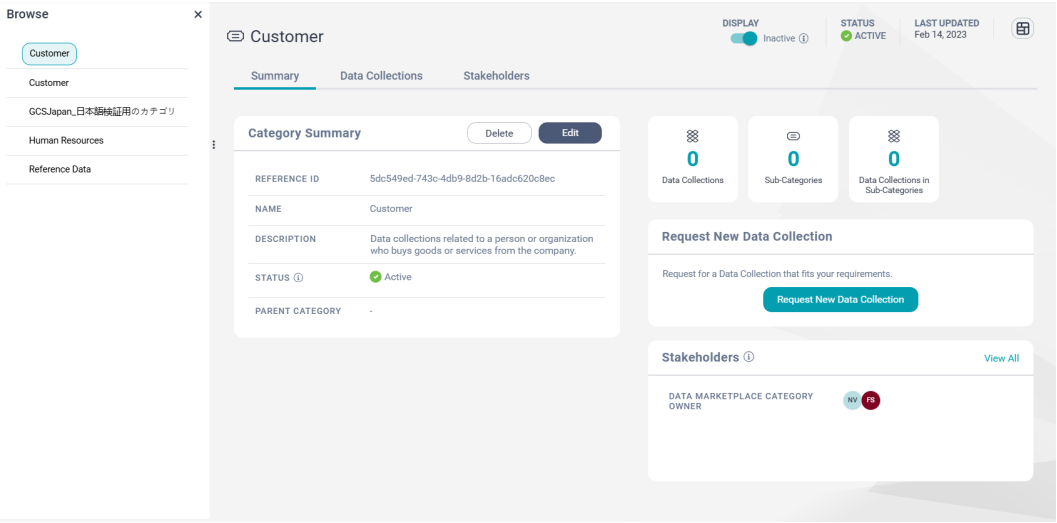

The following image shows how the **New** page appears when you log in as a Data Marketplace Administrator:

Categories

A category is a grouping of related data collections. It is a predefined classification where stakeholders can publish the data collections for which they are responsible.

On the **Browse** page, you can view all the categories that are available in Data Marketplace. You can click a category to view the category details. The following image shows an example of a category details page:

Browse panel

The **Browse** panel displays all the categories and their subcategories that are available in Data Marketplace.

Prerequisites

To browse for categories, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories is enabled in Metadata Command Center.

To view the details of a category, click the category to open its details page. To reveal the subcategories of a category in the **Browse** panel, click the **Expand** button. You can also click the **Expand** button once again to collapse an expanded category tree.

As Data User, you can view only the active categories in the **Browse** panel. Inactive categories are visible to only a stakeholder that is responsible for at least one category or to a Data Marketplace Administrator.

Summary tab

On the **Summary** tab, you can view the properties of the category that is selected in the **Browse** panel.

Prerequisites

To view the properties of a category, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories is enabled in Metadata Command Center.

Category Summary section

The following table describes the fields in the **Category Summary** section:

Field	Description
Reference ID	Reference identifier of the category.
Name	Name of the category.
Description	Description of the category. You can refer to the description of a category to determine whether it contains the data collections that are relevant to you.

Field	Description
Status	Status of the category indicates whether the category is discoverable and usable in Data Marketplace. A category can have one of the following statuses: - **Active**. The category is discoverable and usable in Data Marketplace. - **Inactive**. The category isn't discoverable and usable in Data Marketplace. If the selected category has a direct or indirect parent category that is inactive, the selected category is effectively inactive even if the **Status** field indicates that is active. Data collections that belong to an effectively inactive category are not discoverable to Data Users on the **Browse** and **Search** pages. A Data User that received access to a data collection that later belonged to an effectively inactive category can still navigate from the **Data I Use** page to the details page of the inactive category if the Data User is assigned **Read** permission in Metadata Command Center on inactive categories. Additionally, even if a Data User has opened the details page of an inactive category, Data Marketplace does not display the selected inactive category in the **Browse** panel.
Parent Category	If your category is a subcategory to another category, you can view its parent category in the **Parent Category** field.
Asset Groups	The asset groups of the category. For more information about asset groups, see the *Use Metadata Command Center to enrich and manage items* topic in the *Set Up Data Marketplace* help.

For more information about how you can modify or delete a category, see the *Categories* topic in *Set Up Data Marketplace* help.

Stakeholders section

View the users or user groups that are responsible for the category. For more information, see "Stakeholders tab" on page 57.

Metrics section

View the number of published data collections and active subcategories that are part of the selected category. You can also view the number of active data collections in the subcategories.

Note: For an inactive category, Data Marketplace does not display these metrics.

Request New Data Collection section

If you want a new data collection to be created and added to the category, click **Request New Data Collection**. For more information about how you can request a new data collection, See the *Requesting new data collections* topic in the *Working with Data Collections* help.

Data Collections tab

On the **Data Collections** tab, you can view the data collections that constitute the category and its subcategories.

Prerequisites

To view the data collections of a category, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories and data collections is enabled in Metadata Command Center.

Recent Data Collections

In the **Recent Data Collections** carousel, you can view the most recently created data collections of the category.

Note: For an inactive category, Data Marketplace does not display this information.

Data Collections of the category

The following table describes the fields in the **Data Collections** grid:

Field	Description
Reference ID	Reference identifier of the data collection.
Name	Name of the data collection.
Purpose	Overview of the contents of the data collection.
Category	Name of the category.
Owner	Name of the stakeholders of the data collection.

You can also configure the **Data Collections** grid to display the collections of the subcategories of the selected category, and also select whether you want the grid to display collections that belong to inactive subcategories. For more information, see "Display section" on page 57.

To order a data collection, click the data collection name in the **Name** column to open the data collection page. On the data collection page, you can order the collection. For more information about how you can order a data collection, see the *Ordering data collections* topic in the *Working with Data Collections* help.

Note: When a Data User views the details page of an inactive category, Data Marketplace displays the **Data Collections** grid only if the Data User is assigned the **Read** permission in Metadata Command Center on inactive data collections.

Stakeholders tab

On the **Stakeholders** tab, you can view the stakeholders of the category. Stakeholders are authorized users that are responsible for a category and the data within it.

Prerequisites

To view the stakeholders of a category, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories is enabled in Metadata Command Center.

The following table describes the fields in the **Stakeholders** grid:

Field	Description
Stakeholder Role	Name of the stakeholder role that is assigned to the user or user group. For more information about a stakeholder role, see the *Use Metadata Command Center to enrich Data Marketplace objects* topic in the *Set Up Data Marketplace* help.
Stakeholder Name	Name of the user or user group that is assigned as the stakeholder of the category.
Stakeholder Assignment	This field indicates whether or not a stakeholder is inherited from a parent category. This field can have one of the following values: - **Inherited**. The stakeholder is inherited from a parent category. - **Specifically Assigned**. The stakeholder is assigned directly to the category.

For more information about how you can modify the stakeholders of a category, see the *Categories* topic in *Set Up Data Marketplace* help.

Display section

In the **Display** section, you can configure the category to display the collections of its subcategories, and also configure the **Browse** panel to display inactive categories and inactive subcategories.

View subcategories

If you want the **Data Collections** tab to display the collections of the subcategories of a selected category, toggle on the **Sub-Categories** option in the **Display** section. If this option is not toggled on, the **Data Collections** tab displays only the data collections that are associated with the category that you have selected.

View inactive categories and subcategories

If you want the **Browse** panel to display inactive categories and inactive subcategories, toggle on the **Inactive** option in the **Display** section. If this option is not toggled on, the **Browse** panel displays only the active categories and active subcategories in the panel.

View data collections of inactive subcategories.

If you want the **Data Collections** tab to display the collections of the inactive subcategories of a selected category, toggle on the **Inactive** option in the **Display** section. If this option is not toggled on, the **Data Collections** tab displays only the data collections that belong to the active subcategories of the category that you have selected.

Ensure that you have also toggled on the **Sub-Categories** option in the **Display** section.

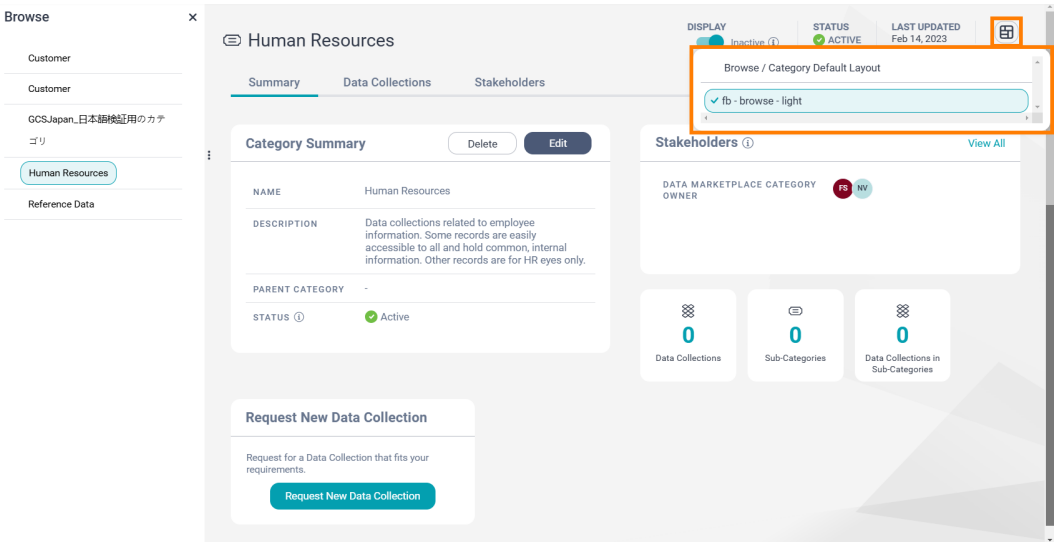

You can view the **Display** section on all the tabs of a category page.

Switch between page layouts

Your administrator might customize the **Browse** and category pages by creating different layouts for them.

If you have multiple page layout options available to you, you can use the **Switch Layout** icon to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

The following image shows the layouts available for a category page:

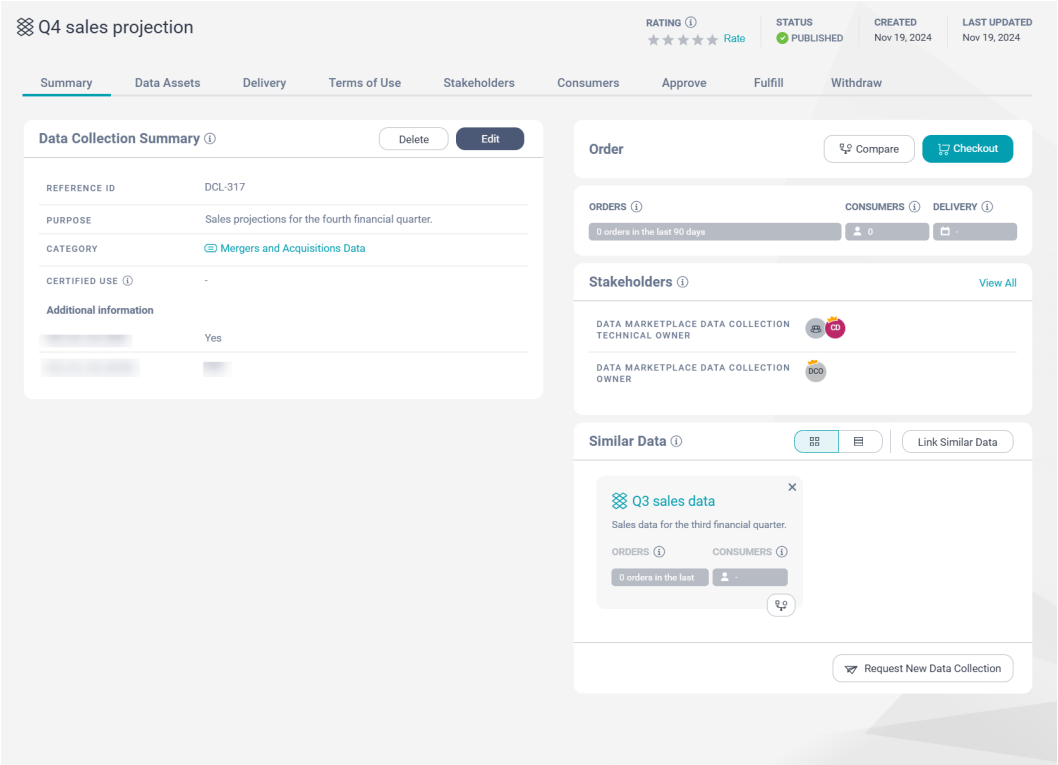

Data collections

A data collection is a grouping of one or more related data assets.

You can use relevant keywords to search for a data collection that meets your requirements. For more information about how you can search for data collections, see the *Search and access data collections* topic in the *Working With Data Collections* help.

To view the details of a data collection, click the data collection. When you open a data collection, the page contains several tabs.

The following image shows an example of a data collection page:

Summary tab

On the **Summary** tab, you can view the properties of a data collection.

Prerequisites

To view the properties of a data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories, data collections and usage contexts is enabled in Metadata Command Center.

Data Collection Summary section

The following table describes the fields in the **Data Collection Summary** section:

Field	Description
Reference ID	Reference identifier of the data collection.
Purpose	Purpose of the data collection as defined by a stakeholder of the data collection. As a Data User, you can refer to this description to determine if you need the data to make business decisions.
Category	Name of the category that contains the data collection.
Certified Use	The uses for which the data is best suited as specified by the stakeholders of the data collection.

For more information about how you can modify or delete a data collection, see the *Working with Data Collections* help.

Data collection information section

The following table describes the fields that you can view in the data collection information section:

Field	Description
Rating	A data collection's rating is the average of each Data User's assessment of the data collection. The rating helps potential consumers to gauge the usefulness of a data collection. It also helps stakeholders to understand how useful their collection is to the Data Users.
Status	Indicates whether the data collection is discoverable to Data Users. A data collection can have one of the following statuses: - **Published**. The data collection is discoverable to Data Users. - **Unpublished**. The data collection isn't discoverable to Data Users.
Created	Date when the data collection was created.
Last Updated	Latest date when the data collection was modified.

Additional information section

View additional details about a data collection that are specified by a stakeholder of the data collection. The fields that appear in the **Additional Information** section are configured by your Administrator in Metadata Command Center. The **Additional Information** section displays only the fields for which the stakeholder has specified a value. The empty fields remain hidden until the stakeholder adds a value to them.

For more information about these fields, see the *Create custom attributes for objects* topic in the *Set Up Data Marketplace* help.

Stakeholders section

View the users or user groups that are responsible for the data collection. For more information, see "Stakeholders tab" on page 69.

Metrics section

View the essential metrics of a data collection in the form of pie charts and bar charts. This information can help you to decide whether or not the data suits your business needs. Pie charts provide information about the usage context and delivery templates of data collection. Bar charts provide information about the number of consumer access and order timeline details.

The metrics section of a data collection page displays the following two pie charts:

What it's used for? This pie chart shows the usage contexts that the users have entered while placing orders for a data collection. This pie chart displays the breakdown of usage contexts for all active consumer accesses of the data collection.

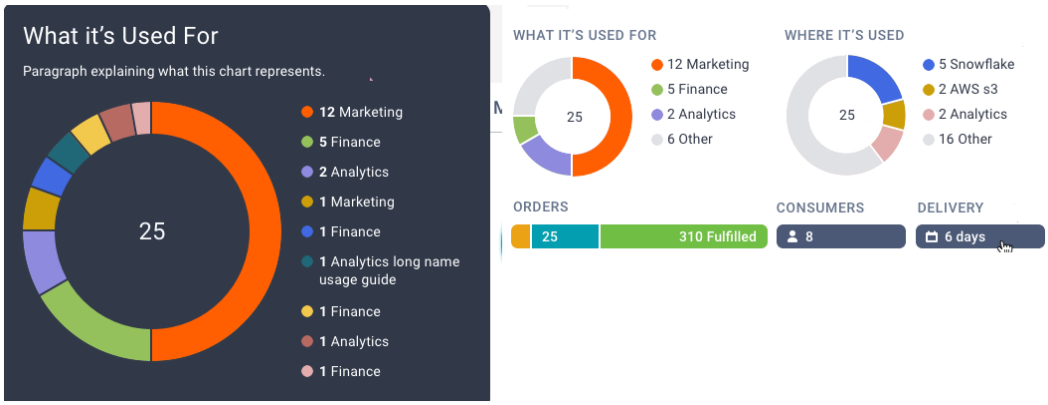

The pie chart displays the following segments:

- The top three usage contexts are represented in three different segments.
- The **Other** segment denotes the remaining usage contexts specified by users.

A legend helps you to understand what each segment represents. At the center of the pie chart, you can find the total number of usage contexts. When you hover over the pie chart, a list of all the usage contexts associated with this data collection is displayed.

Where it's used? This pie chart represents the delivery templates used for the data collection. It displays the top three delivery templates, and the **Other** segment indicates all the remaining delivery templates used for this data collection. Hover over this pie chart to see the breakdown of all the delivery templates.

The following image depicts the metrics section:

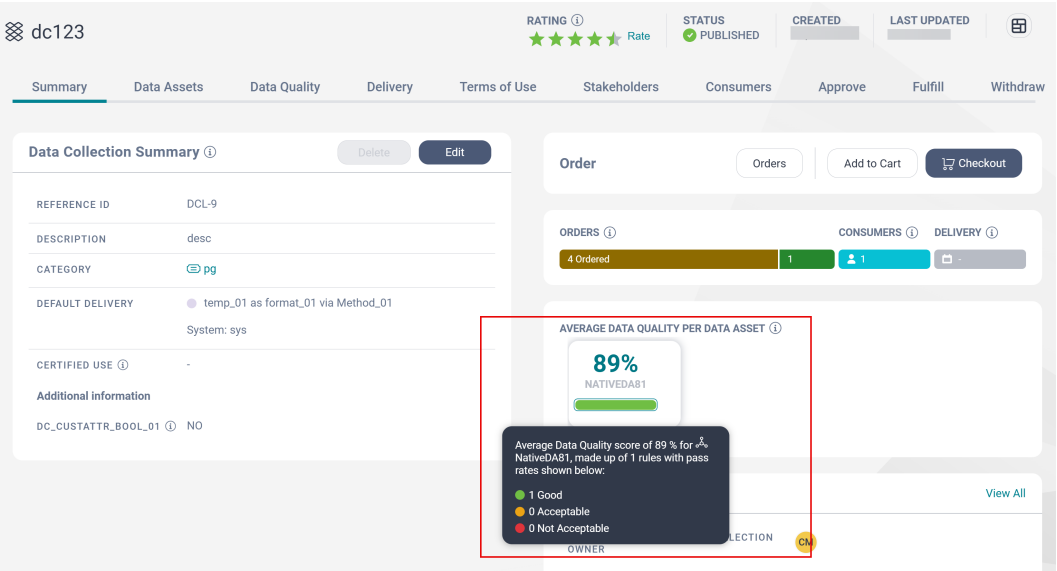

The metrics section also displays bar charts to indicate the timeline of the data collection orders, number of consumer accesses, and the average delivery time.

- The **Orders** bar chart indicates the order timeline and displays the number of orders at each stage of processing the data collection order. The timeline of an order has the request, approval, and fulfillment stages.
- The **Consumers** bar chart displays the number of active consumer accesses for the data collection.
- The **Delivery** bar chart denotes the average time taken for approval and fulfillment of the order.

Average Data Quality Per Asset section

View the data quality score for each data asset available on the **Data Assets** tab.

The following image shows the average data quality score for a data collection:

You can use these data quality metrics to determine the reliability of your data. Data Marketplace uses distinct colors to visualize the metrics. These colors allow you to distinguish helpful data from unhelpful data according to the target and threshold values defined in Data Marketplace or in Data Governance and Catalog.

Your Data Marketplace Administrator uses REST APIs to manage the scores of each asset. For Data Governance and Catalog assets, the scores are measured in a data quality system and are imported from Data Governance and Catalog.

For more information about data quality rules, see the *Viewing data quality scores* topic in the *Set Up Data Marketplace* help.

Similar Data section

View the data collections that a stakeholder has linked to the collection that you are viewing.

As a Data User, you can use this section to identify data collections that are similar to the collection that you are viewing. You can then use the **Add to Cart** button to add the data collections to the **My Cart** page, and you can use the compare feature to determine the data collection that meets your business requirements. If the **Similar Data** section contains an unpublished data collection, you cannot click it to navigate to the details page of the unpublished collection.

A stakeholder of the data collection is responsible for linking data collections that are similar to the one for which they are responsible. For more information about how you can link similar data collections, see the *Linking data collections* topic in the *Working With Data Collections* help.

Data Assets tab

On the **Data Assets** tab, you can view all the data assets that are part of a data collection and also view the data elements that are part of the data assets that comprise the collection.

The **Data Assets** tab contains the following grids:

- Data Assets
- Data Elements

Data Assets grid

Prerequisites

To view the data assets of a data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets and data collections is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets, data classifications and technical assets, including the Profiling attribute group for technical assets is enabled in Metadata Command Center.

In this grid, you can view all the data assets that are part of the data collection. If you want to view the data asset page of an asset, click the data asset that you want to open. If you want to show or hide a column in the **Data Asset** grid, click the **Settings** icon . To revert to the default view, click **Reset**.

The following table describes the fields in the **Data Assets** grid:

Field	Description
Reference ID	Reference identifier of the data asset.
Name	Name of the data asset. If you import a data asset from Data Governance and Catalog, the **Name** field displays the business name of the data asset. If no business name is specified for the data asset in Data Governance and Catalog, the **Name** field displays the technical name of the data asset.
Description	Description of the data asset. If you import a data asset from Data Governance and Catalog, the **Description** field displays the description of the data asset specified in Data Governance and Catalog.
Data Source	Source system from which the data is supplied to Data Marketplace.
Descriptive Source	Source application from which the description of the data asset is taken.
Type	Type of the data asset. A data asset can have one of the following types: - **Native Data Asset**. The data asset was created in Data Marketplace. - **Governed Data Asset**. The data asset was imported from Data Governance and Catalog.
Asset Link	Link to the associated asset in Data Governance and Catalog.
Source Path	Location of the data asset in the source system where the data asset is stored.

Field	Description
Source Path Description	Description of the location in the source system where the data asset is stored.
Technical Data Asset	Name of the data asset as it appears in the source system where the data asset is stored.
Status	Status of the data asset indicates whether the data asset is available to be added to data collections. A data asset can have one of the following statuses: - **Enabled**. The data asset is available to be added to data collections. - **Disabled**. The data asset isn't available to be added to data collections.
Created	Date when the data asset was created.
Data Quality	Data quality score of the data asset as calculated in a data quality system.
Average Score	Average of the data quality score for the data asset.
Last updated	Latest date when the data asset was modified.
Rating	Rating of the associated asset in Data Governance and Catalog.

Data Elements grid

Prerequisites

To view the data elements of a data asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets, data collections and data elements is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets, data classifications and technical assets, including the Profiling attribute group for technical assets is enabled in Metadata Command Center.

In the **Data Elements** grid, you can view the data elements that a data asset contains. To find a specific data element, enter the name of data element in the search bar and click **Search**. When you search for a data element, ensure that the following conditions are fulfilled:

- The search term that you enter must not exceed 1000 characters.
- If you want to use a reserved word to search for a data element, enter the reserved word in quotes. For more information about reserved words, see "Reserved words" on page 66.
- If your search query contains a special character, ensure that you enter your search query in quotes.

The following table describes the fields in the **Data Elements** grid:

Field	Description
Reference ID	Reference identifier of the data element.
Name	Name of the data element. If you import a data element from Data Governance and Catalog, the **Name** displays the technical name of the data element.
Description	Description of the data element. If you import a data element from Data Governance and Catalog, Data Marketplace displays the business description of the data element. If no business description is specified for the data element in Data Governance and Catalog, the **Description** field displays the technical description of the data element.
Business Name	Business name of a data element as defined in Data Governance and Catalog. You can also hover your pointer over the business name of an element to view its business description. An element's business name and business description are defined in Data Governance and Catalog. In Data Governance and Catalog, technical assets might have user-friendly business names assigned to them. Users can assign the business names manually, or the system can automatically assign the names. For more information, see the *Enrich technical assets with governance context* topic in the *Asset Management* help for Data Governance and Catalog.
Type	Type of the data element.
Technical Name	Name of the data element as it appears in the source system where the data element is stored.
Technical Type	Type of the data element as defined in the source system where the data element is stored.
URI	URL path of the source system where the data asset is stored.
Status	Status of the data element indicates whether the data element is available in the data collections that are associated with the data asset that contains the element. A data element can have one of the following statuses: - **Enabled**. The data element is available in the data collections that are associated with the data asset that contains the element. - **Disabled**. The data element isn't available in the data collections that are associated with the data asset that contains the element.
Data Asset	Name of the data asset to which the data element is associated.
Data Quality	Data quality score of the data element as calculated in a data quality system.

The **Data Elements** grid displays additional profiling information obtained from Data Governance and Catalog. You can view the following profiling information for a data element that is imported from Data Governance and Catalog:

- Nulls / Distinct / Non-Distinct
- Glossary
- Classification
- Source Data Type

- Inferred Data Type

For more information about how to add a data asset and add data element to a data asset, see the *Set Up Data Marketplace* help.

Reserved words

Reserved words are words that are reserved for specific functions in Data Marketplace.

The reserved words include the following words:

- `ALL`
- `ARE`
- `TYPE`
- `AND`
- `ANY`
- `AS`
- `CONTAINING`
- `DAY`
- `DAYS`
- `EQUALS`
- `GREATER`
- `HOUR`
- `HOURS`
- `HAS`
- `IN`
- `INBOUND`
- `IS`
- `LAST`
- `LESS`
- `BETWEEN`
- `MATCHING`
- `NOT`
- `NULL`
- `OR`
- `OUTBOUND`
- `RELATED`
- `TRAVERSE`
- `REPEAT`
- `UNTIL`
- `HOPS`
- `UNBOUNDED`

- RELATIONSHIPS
- ROLE
- THAN
- THROUGH
- TO
- WHERE
- WHICH
- WITH
- WITHIN
- WITHOUT
- HAVING
- STAKEHOLDER

Note: If you want to use a reserved word to search for a data asset or a data element, enter the reserved word in quotes.

Data Quality tab

On the **Data Quality** tab, you can view the data quality information for the data assets that constitute the data collection.

Prerequisites

To view this tab, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets and data collections is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets, data classifications and technical assets, including the Profiling attribute group for technical assets is enabled in Metadata Command Center.

You can use these data quality metrics to determine the reliability of your data. Data Marketplace uses distinct colors to visualize the metrics. These colors allow you to identify helpful data using the target and threshold values defined in Data Marketplace or in Data Governance and Catalog.

Your Data Marketplace Administrator uses REST APIs to manage the scores of each asset. For Data Governance and Catalog assets, the scores are measured in a data quality system and are imported from Data Governance and Catalog into Data Marketplace.

For more information about data quality rules, see the *Set Up Data Marketplace* help.

Delivery tab

On the **Delivery** tab, you can select a delivery target for the data collection.

Prerequisites

To view the delivery options of a data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data collections, delivery formats, delivery methods, delivery targets and delivery templates is enabled in Metadata Command Center.

The following table describes the fields in the **Delivery Targets** grid:

Field	Description
Default	Indicates whether or not the delivery target is the default delivery option of the data collection.
Reference ID	Reference identifier of the delivery target.
Target	Name of the delivery target.
Status	Status of the delivery target indicates whether the delivery target is available for use to the Data Users that order the data collection. A delivery target can have one of the following statuses: - **Active**. The delivery target is available for use to the Data Users that order the data collection. - **Inactive**. The delivery target isn't available for use to the Data Users that order the data collection.
Type	The type of delivery. - If the delivery type is **Automatic**, the order approval and fulfillment is automated. - If the delivery type is **Manual**, one or more stakeholders of the data collection must approve and fulfill the order manually.
Format	Format in which the data is delivered.
Method	Method used to deliver the data.
System	Systems for which you want to specify the data.
Description	Description of the delivery target.
Delivery Owner	Name of the users that manage the delivery template on which the delivery target is created.

For more information about configuring a delivery target for a data collection, see the *Specifying delivery targets for data collection* topic in the *Working With Data Collections* help.

Terms of use tab

On the **Terms of Use** tab, you can view the terms of use that are guidelines for appropriate use of a data collection.

Prerequisites

To view the terms of use associated with the data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data collections and terms of use is enabled in Metadata Command Center.

The following table describes the sections on the **Terms of Use** tab:

Section	Description
General Terms of Use	View the terms of use that apply to all the data collections in Data Marketplace.
Terms of Use Types	Type of the terms of use that apply to the data collection. Your administrator defines the terms of use types in Metadata Command Center. For more information about terms of use, see the *Terms of use* topic in the *Set Up Data Marketplace* help.
Terms of Use	View the terms of use that you must agree to use the data collection.

For more information about adding terms of use to a data collection, see the *Adding terms of use to a data collection* topic in the *Working With Data Collections* help.

Stakeholders tab

On the **Stakeholders** tab, you can view the stakeholders of the data collection. Stakeholders are authorized users that are responsible for a data collection and the data within it.

Prerequisites

To view the stakeholders of a data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data collections is enabled in Metadata Command Center.

The following table describes the fields in the **Stakeholders** grid:

Field	Description
Stakeholder Role	Name of the stakeholder role that is assigned to the user or user group. For more information about a stakeholder role, see the *Use Metadata Command Center to enrich Data Marketplace objects* topic in the *Set Up Data Marketplace* help.
Stakeholder Name	Name of the user or user group that is assigned as the stakeholder of the data collection.
Stakeholder Assignment	This field indicates whether or not a stakeholder is inherited from the category of the data collection. This field can have one of the following values: - **Inherited**. The stakeholder is inherited from the category. - **Specifically Assigned**. The stakeholder is assigned directly to the data collection.

For more information about how you can modify the stakeholders of a data collection, see the *Modifying stakeholders of a data collection* topic in *Working With Data Collections* help.

Consumers tab

On the **Consumers** tab, you can view the records that indicate a Data User's access to a data collection.

Prerequisites

To view the consumer access for the data collection, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for consumer accesses and data collections is enabled in Metadata Command Center.

The following table describes the fields in the **Consumer Access Details** grid:

Field	Description
Access ID	Reference identifier of a consumer access.
Consumer	Name of the Data User that has access to the data collection.
Delivery Target	Name of the delivery target used to deliver the data collection.
Business Justification	A brief description about how the Data User plans to use the data.
Fulfilled	Date when the order was fulfilled.

Field	Description
Usage Context	The context within which the data is used as specified by the Data User at the time of order.
Status	Status of the consumer access. A consumer access can have one of the following statuses: - **Available**. The Data User has access to the data collection. - **Pending Withdraw**. A request is submitted to withdraw the Data User's access to the data collection. - **Withdrawn**. The Data User's access to the data collection is withdrawn.

For more information, see the *Consumer accesses* topic in the *Working with Data Collections* help.

Approve tab

On the **Approve** tab, you can view the orders placed by Data Users to gain access to the data collection.

Prerequisites

To view this tab, verify one of the following prerequisites:

- Your user profile is assigned the Data Marketplace Administrator user role.
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Data Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Approve or Reject Orders** privileges are enabled in Administrator.
  - **Read** permission for data collections, orders and usage contexts is enabled in Metadata Command Center.

The following table describes the fields in the **Orders** grid:

Field	Description
Order	Reference identifier of the order.
Consumer	Name of the Data User that ordered the data collection.
Ordered	Date when the data collection was ordered.
Usage Context	The context within which the data is to be used if the order is fulfilled as specified by the Data User.

Field	Description
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order.
Assigned To	The delegate of the order. This field can have one of the following values: - **Me**. The order is assigned to you. - **My Group**. The order is assigned to your group. - **All**. The order is assigned to a user or group whose information is accessible to you.

To approve or reject an order, click the Action Menu icon and select **Approve** or **Reject**. For more information about order approval, see the *Responding to orders* topic in the *Working with Data Collections* help.

Fulfill tab

On the **Fulfill** tab, you can view approved orders that await fulfillment.

Prerequisites

To view this tab, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with one of the following stakeholder roles on the data collection:
  - Technical Owner
  - Category Owner
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Fulfill Or Reject Orders** privileges are enabled in Administrator.
  - **Read** permission for data collections, orders and usage contexts is enabled in Metadata Command Center.

The following table describes the fields in the **Orders** grid:

Field	Description
Order	Reference identifier of the order.
Consumer	Name of the Data User that ordered the data collection.
Ordered	Date when the data collection was ordered.
Usage Context	The context within which the data is to be used if the order is fulfilled as specified by the Data User.

Field	Description
Business Justification	The reason for the requirement of access to the data provided by the Data User at the time of order.
Assigned To	The delegate of the order. This field can have one of the following values: - **Me**. The order is assigned to you. - **My Group**. The order is assigned to your group. - **All**. The order is assigned to a user or group whose information is accessible to you.

For more information about order fulfillment, see the *Fulfilling orders* topic in the *Working with Data Collections* help.

Withdraw tab

On the **Withdraw** tab, you can view the requests to remove the Data Users' access to data collections.

Prerequisites

To view this tab, verify one of the following prerequisites:

- Your user profile is assigned one of the following user roles:
  - Technical Administrator
  - Data Marketplace Administrator
- You are either an inherited or specifically assigned stakeholder with the Technical Owner stakeholder role on the data collection.
- You are either an inherited or specifically assigned stakeholder on the data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** and **Withdraw Consumer Accesses** privileges are enabled in Administrator.
  - **Read** permission for consumer accesses, data collections and usage contexts is enabled in Metadata Command Center.

The following table describes the fields in the **Withdraw Requests** grid:

Field	Description
Access	Reference identifier of a consumer access.
Requested By	Name of the user that requested the access withdrawal.
Consumer	Name of the Data User that has access to the data.
Requested	Date when the access withdrawal request was submitted.
Usage Context	The context within which the data is used as specified by the Data User at the time of order.

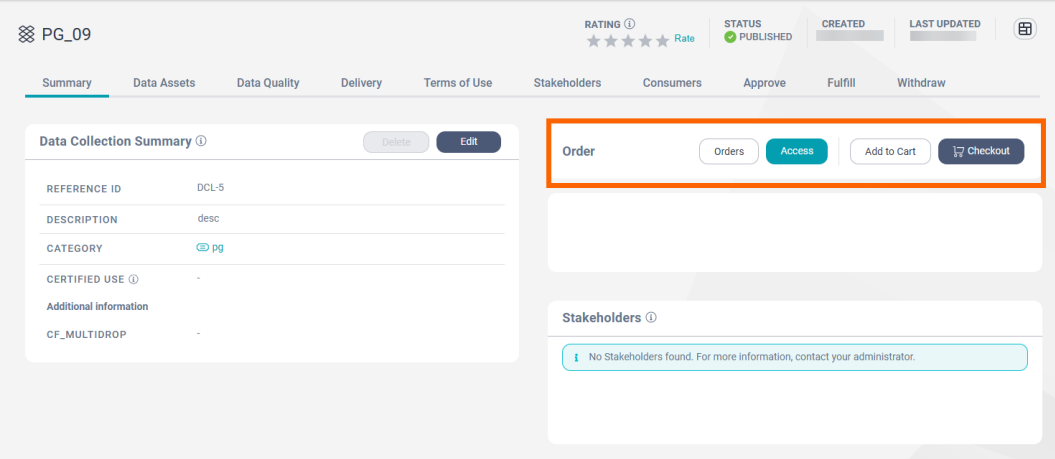

Field	Description
Business Justification	Reason for the access withdrawal.
Assigned To	The delegate of the withdrawal request. This field can have one of the following values: - **Me**. The withdrawal request is assigned to you. - **My Group**. The withdrawal request is assigned to your group. - **All**. The withdrawal request is assigned to a user or group whose information is accessible to you.

For more information about consumer access withdrawal, see the *Withdrawing consumer accesses* topic in the *Working with Data Collections* help.

Order section

In the **Order** section, you can check out the data collection that you are viewing or send it to the **My Cart** page to compare it with other data collections that interest you.

The following image shows the **Order** section on a data collection page:

Checkout

On the **Order** section, you can use the **Checkout** button to submit a request to gain access to a data collection that meets your requirements. For more information about how you can order a data collection, see the *Ordering data collections* topic in the *Working with Data Collections* help.

Add to Cart

On the **Order** section, you can use the **Add to Cart** button to add the data collection to the **My Cart** page. The **My Cart** page lets you compare data collections that you have added to your cart. After you have determined the collections that best suit your needs, you can check out multiple data collections simultaneously.

For more information about how you can compare data collections, see the *Comparing data collections* topic in the *Working with Data Collections* help.

Orders and Access

If you have an active order or access for a data collection, the **Order** section displays the **Orders** and **Access** buttons next to the **Checkout** button. The additional buttons open your active orders and latest

active access for the data collection. If you have only an order or only an access, the **Order** section displays only the corresponding button.

You can view the **Order** section on the following tabs of a data collection page:

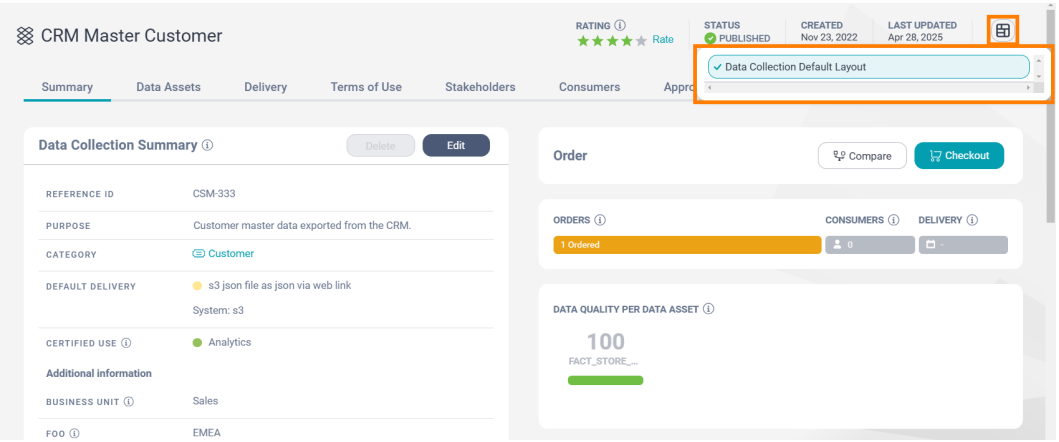

- Summary
- Data Assets
- Delivery
- Terms of Use

Switch between page layouts

Your administrator might customize the data collection page by creating a different layout for the page.

If you have multiple page layout options available to you, you can use the **Switch Layout** icon to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

The following image shows the layouts available for a data collection page:

Data assets

A representation of data in an organization. Data assets might contain relevant data elements and are contained in one or more data collections.

Data assets are the building blocks with which stakeholders create their data collections. Besides using Data Governance and Catalog assets, stakeholders can also use data assets native to Data Marketplace to enrich their data collections.

Summary tab

On the **Summary** tab, you can view the properties of a data asset.

Native data asset

Prerequisites

To view the properties of a native data asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets is enabled in Metadata Command Center.

Data Asset Summary panel

The following table describes the fields in the **Data Asset Summary** panel:

Field	Description
Reference ID	Reference identifier of the data asset.
Name	Name of the data asset.
Description	Description of the data asset as defined.
Data Source	Source system from which the data is supplied to Data Marketplace.
Descriptive Source	Source application from which the description of the data asset is taken.
Source Path	Location of the data asset in the source system where the data asset is stored.
Source Path Description	Description of the location in the source system where the data asset is stored.
Technical Data Asset	Name of the data asset as it appears in the source system where the data asset is stored.
Type	Type of the data asset. In this field, you can also view the following tags that are appended by Data Marketplace to the data asset: - **Native Data Asset**. The data asset was created in Data Marketplace. - **Governed Data Asset**. The data asset was imported from Data Governance and Catalog into Data Marketplace.

Field	Description
Asset Link	Link to the associated asset in Data Governance and Catalog.
Status	Status of the data asset indicates whether the data asset is available to be added to data collections. A data asset can have one of the following statuses: - **Enabled**. The data asset is available to be added to data collections. - **Disabled**. The data asset isn't available to be added to data collections.

Add to Data Collection section

In the **Add to Data Collection** section, add the data asset to an existing data collection or use the data asset details to create a new data collection for the data asset. For more information, see the *Data Assets* topic in the *Set Up Data Marketplace* help.

Associated Data Collections section

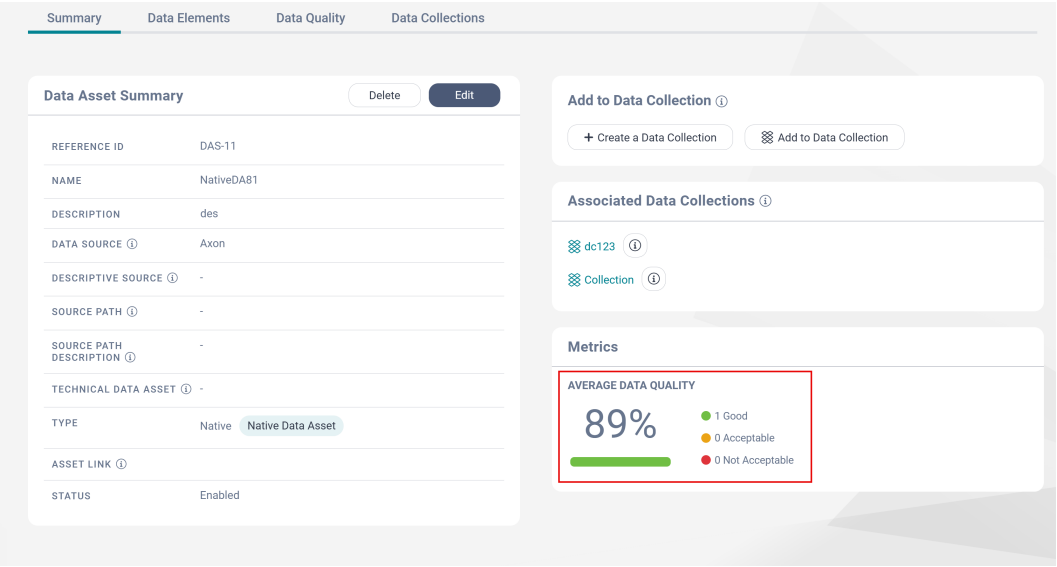

In the **Associated Data Collections** section, you can view all the data collections that contain the data asset. For more information, see "Data Collections tab" on page 82.

Metrics section

In the **Metrics** section, you can view the data quality metrics for the data asset. For more information, see "Data Quality tab" on page 81.

Typically, a Data Marketplace Administrator is responsible for creating and managing Data Marketplace data assets. For more information about creating or modifying a data asset, see the *Data Assets* topic in the *Set Up Data Marketplace* help.

The following image shows the average data quality score for a data asset:

Governed data asset

Prerequisites

To view the properties of a Data Governance and Catalog asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets and technical assets is enabled in Metadata Command Center.

If you have assets in Data Governance and Catalog that are well governed and which can be used for business decision making, you can quickly load them into Data Marketplace.

If you want to modify an asset that was imported from Data Governance and Catalog, open the asset in Data Governance and Catalog. For more information about how you can modify a Data Governance and Catalog asset, see the Data Governance and Catalog help.

Data Asset Summary panel

The following table describes the fields in the **Data Asset Summary** panel:

Field	Description
Reference ID	Reference identifier of the data asset.
Name	Name of the data asset as defined in Data Governance and Catalog.
Description	Description of the data asset as defined in Data Governance and Catalog.
Data Source	Source system from which the data is supplied to Data Governance and Catalog.
Descriptive Source	Source application from which the description of the data asset is taken.
Source Path	Location of the data asset in the source system where the data asset is stored.
Source Path Description	Description of the location in the source system where the data asset is stored.
Technical Data Asset	Name of the data asset as it appears in the source system where the data asset is stored.

Field	Description
Type	Type of the data asset. In this field, you can also view the following tags that are appended by Data Marketplace to the data asset: - **Native Data Asset**. The data asset was created in Data Marketplace. - **Governed Data Asset**. The data asset was imported from Data Governance and Catalog into Data Marketplace.
Asset Link	Link to the associated asset in Data Governance and Catalog.
Status	Status of the data asset indicates whether the data asset is available to be added to data collections. A data asset can have one of the following statuses: - **Enabled**. The data asset is available to be added to data collections. - **Disabled**. The data asset isn't available to be added to data collections.

In the **Additional Information** section of the **Data Asset Summary** panel, you can view additional details about an asset that are specified in Data Governance and Catalog. The fields that appear in the **Additional Information** section are configured for the asset in Metadata Command Center.

When an asset is imported from Data Governance and Catalog into Data Marketplace, the system also retrieves its rating. A rating in Data Governance and Catalog represents a user's assessment of an asset. Data Governance and Catalog users rate assets between one to five stars. The value that you see is the average of the ratings provided by all the Data Governance and Catalog users. You can refer to the rating of a Data Governance and Catalog asset to gauge its reliability.

For more information about Data Governance and Catalog assets, see the *Working With Assets* help in Data Governance and Catalog.

Add to Data Collection section

In the **Add to Data Collection** section, add the data asset to an existing data collection or use the data asset details to create a new data collection for the data asset. For more information, see the *Data Assets* topic in the *Set Up Data Marketplace* help.

Associated Data Collections section

In the **Associated Data Collections** section, you can view all the data collections that contain the data asset. For more information, see "Data Collections tab" on page 82.

Metrics section

In the **Metrics** section, you can view the data quality metrics for the data asset. For more information, see "Data Quality tab" on page 81.

Data Elements tab

On the **Data Elements** tab, you can view all the data elements that are part of a data asset.

Prerequisites

To view the data elements of a data asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets and data elements is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets, data classifications and technical assets, including the Profiling attribute group for technical assets is enabled in Metadata Command Center.

On the **Data Elements** grid, you can view the data elements that a data asset contains. When an asset is imported from Data Governance and Catalog, Data Marketplace imports the data elements that constitute the asset. This also includes the manual data elements created in Data Governance and Catalog. For more information about Data Governance and Catalog assets, see the *Asset Details* help in Data Governance and Catalog.

To find a specific data element, enter the name of data element in the search bar and click **Search**. When you search for a data element, ensure that the following conditions are fulfilled:

- The search term that you enter must not exceed 1000 characters.
- If you want to use a reserved word to search for a data element, enter the reserved word in quotes. For more information about reserved words, see "Reserved words" on page 66.
- If your search query contains a special character, ensure that you enter your search query in quotes.

The following table describes the fields in the **Data Elements** grid:

Field	Description
Reference ID	Reference identifier of the data element.
Name	Name of the data element. For a data element that was imported from Data Governance and Catalog, the **Name** field displays the technical name of the data element specified in Data Governance and Catalog.
Description	Description of the data element. For a data element that was imported from Data Governance and Catalog, the **Description** field displays the business description of the data element. If no business description is specified for the data element in Data Governance and Catalog, the **Description** field displays the technical description of the data element.
Business Name	The business name of a data element as defined in Data Governance and Catalog. You can hover your pointer over the business name of an element to view its business description. An element's business name and business description are defined in Data Governance and Catalog. In Data Governance and Catalog, technical assets might have user-friendly business names assigned to them. Users can assign the business names manually, or the system can automatically assign the names. For more information, see the *Enrich technical assets with governance context* topic in the *Asset Management* help for Data Governance and Catalog.

Field	Description
Type	Type of the data element.
URI	URL path of the source system where the data element is stored.
Technical Name	Name of the data element as it appears in the source system where the data element is stored.
Technical Type	Type of the data element as defined in the source system where the data element is stored.
Status	Status of the data element indicates whether the data element is available in the data collections that are associated with the data asset that contains the element. A data element can have one of the following statuses: - **Enabled**. The data element is available in the data collections that are associated with the data asset that contains the element. - **Disabled**. The data element isn't available in the data collections that are associated with the data asset that contains the element.
Data Quality	Data quality score of the data element as calculated in a data quality system.

For more information about how to add a data asset and add data element to a data asset, see the *Data Assets* topic in the *Set Up Data Marketplace* help.

Data Quality tab

In the **Data Quality** tab of a data asset page, you can view the data quality score for each data element that constitutes the data asset.

Prerequisites

To view the data quality details of a data asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets is enabled in Metadata Command Center.
  - **Read** permission for Data Governance and Catalog business assets, data classifications and technical assets, including the Profiling attribute group for technical assets. is enabled in Metadata Command Center

You can use these data quality metrics to determine the reliability of your data. Data Marketplace uses distinct colors to visualize the metrics. These colors allow you to identify helpful data using the target and threshold values defined in Data Marketplace or in Data Governance and Catalog.

Your Data Marketplace Administrator uses REST APIs to manage the scores of each asset. For Data Governance and Catalog assets, the scores are measured in a data quality system and are imported from Data Governance and Catalog into Data Marketplace.

For more information about data quality rules, see the *Set Up Data Marketplace* help.

Data Collections tab

On the **Data Collections** tab, you can view all the data collections that contain the data asset.

Prerequisites

To view the data collections associated with a data asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for data assets and data collections is enabled in Metadata Command Center.

The following table describes the fields that you can view in the **Associated Data Collections** grid:

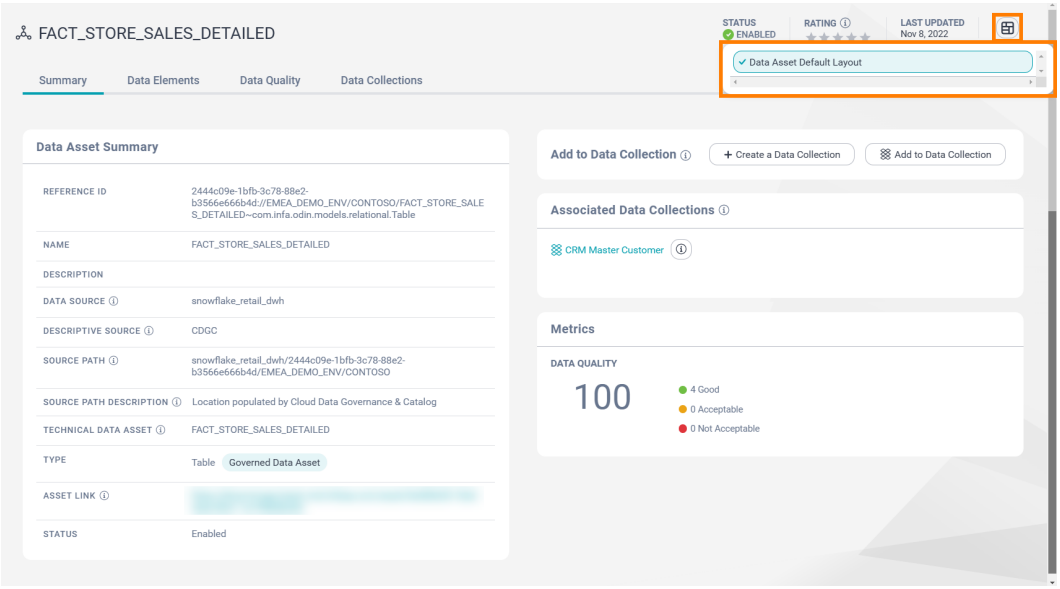

Property	Description
Reference ID	Reference identifier of the data collection that contains the data asset.
Name	Name of the data collection.
Description	Description of the data collection
Status	Status of the data collection indicates whether the data collection is discoverable by Data Users when they search for it. A data collection can have one of the following statuses: - **Published**. The data collection is discoverable to Data Users. - **Unpublished**. The data collection isn't discoverable to Data Users.

Switch between page layouts

Your administrator might customize the data asset page by creating a different layout for the page.

If you have multiple page layout options available to you, you can use the **Switch Layout** icon to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

The following image shows the layouts available for a data asset page:

My Data page

The Data Marketplace **My Data** page provides an overview of a user's activity within Data Marketplace.

On your own **My Data** page, you can view the data collections to which you have received access and the details of the consumer accesses. For more information, see "Data I Use tab" on page 83.

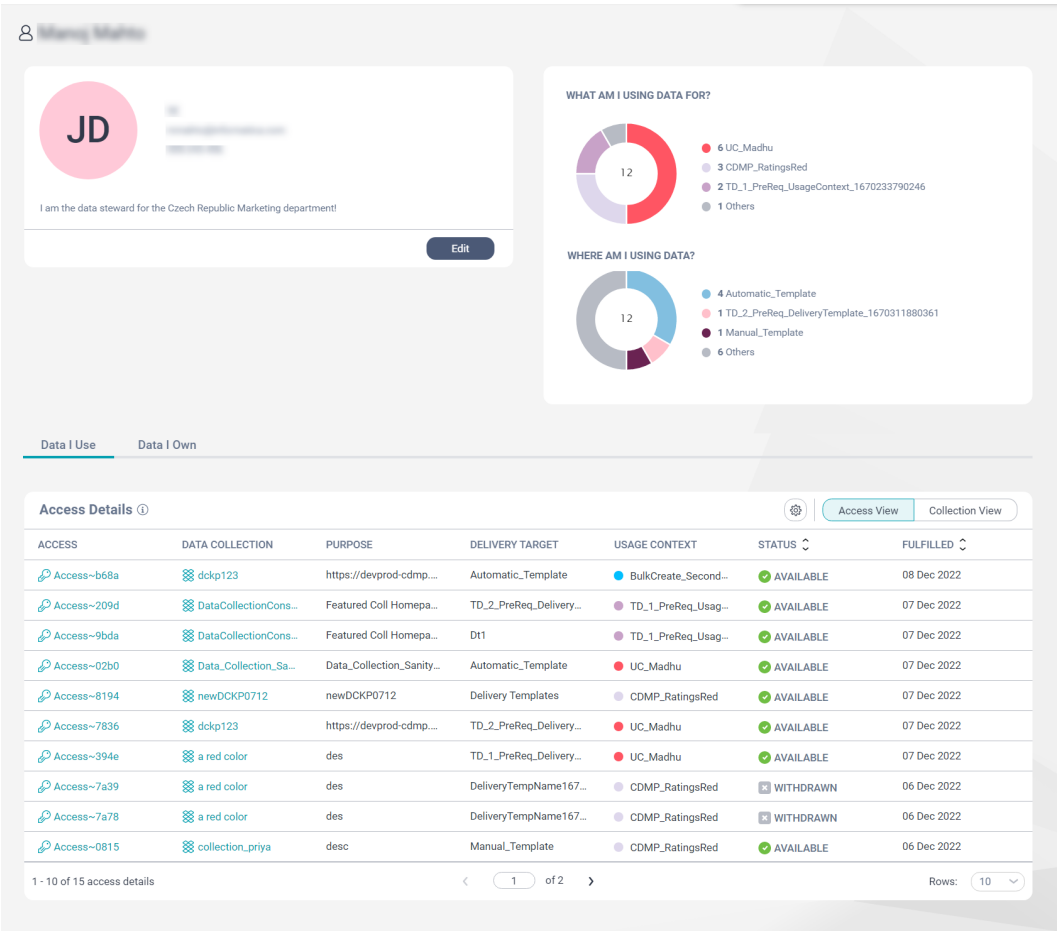

On this page, you can also view the data collections for which you are assigned as a stakeholder, and view the details of the consumer accesses for your data collections. For more information, see "Data I Own tab" on page 86.

You can customize how your **My Data** page appears to other Data Marketplace users. You can modify the avatar color, your avatar initials, and you can also add a short message. When you visit another user's **My Data** page, you can view their basic contact information and get an overview of what relationship the user has to the data within Data Marketplace.

Data I Use tab

On your **My Data** page, you can view the data collections to which you have received access and the details of the consumer accesses.

The following image shows a Data User's **My Data** page:

Access View

Prerequisites

To view the consumer accesses on this tab, verify one of the following prerequisites:

- You are granted access to a data collection and your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see “Predefined roles” on page 10.
- You are granted access to a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for consumer accesses, data collections, delivery targets, delivery templates and usage contexts is enabled in Metadata Command Center.

On the **Access View** tab, you can view the details of your accesses to data collections.

The following table describes the fields that you can view in the **Access Details** grid:

Field	Description
Access ID	Reference identifier of the consumer access.
Data Collection	Name of the data collection to which you have received access.
Purpose	Purpose of the data collection as defined by a stakeholder of the data collection.
Delivery Target	Name of the delivery target used to deliver the data collection.
Delivery Template	Name of the delivery template that was used to create the delivery target.
Usage Context	The context within which the data is used as specified by you at the time of order.
Status	Status of the consumer access. A consumer access can have one of the following statuses: - **Available**. You have access to the data collection. - **Pending Withdraw**. A request is submitted to withdraw your access to the data collection. - **Withdrawn**. Your access to the data collection is withdrawn.
Fulfilled	Date when you received access to the data collection.

To view the details of a consumer access, click the access ID in the **Access** column. For more information about consumer accesses, see the *Consumer accesses* topic in the *Working With Data Collections* help.

Data Collection View

Prerequisites

To view the data collections on this tab, verify one of the following prerequisites:

- You are granted access to a data collection and your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- You are granted access to a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories and data collections is enabled in Metadata Command Center.

On the **Data Collection View** tab, you can view the data collections to which you have received access.

The following table describes the fields that you can view in the **Data Collections** grid:

Field	Description
Reference ID	Reference identifier of the data collection.
Name	Name of the data collection.

Field	Description
Purpose	Purpose of the data collection as defined by a stakeholder of the data collection.
Category	Name of the category that contains the data collection.
Stakeholders	The users or user groups that are responsible for the data collection

Metrics

You can view the following metrics on the **My Data** page:

What am I using data for?

The **What am I using data for?** chart summarizes how you are using data. This chart uses the usage context that you specify when you order the data. In the **What am I using data for?** chart, you can view the count of your active consumer accesses and your top three usages. You can also hover over the chart to reveal a tooltip that contains more details.

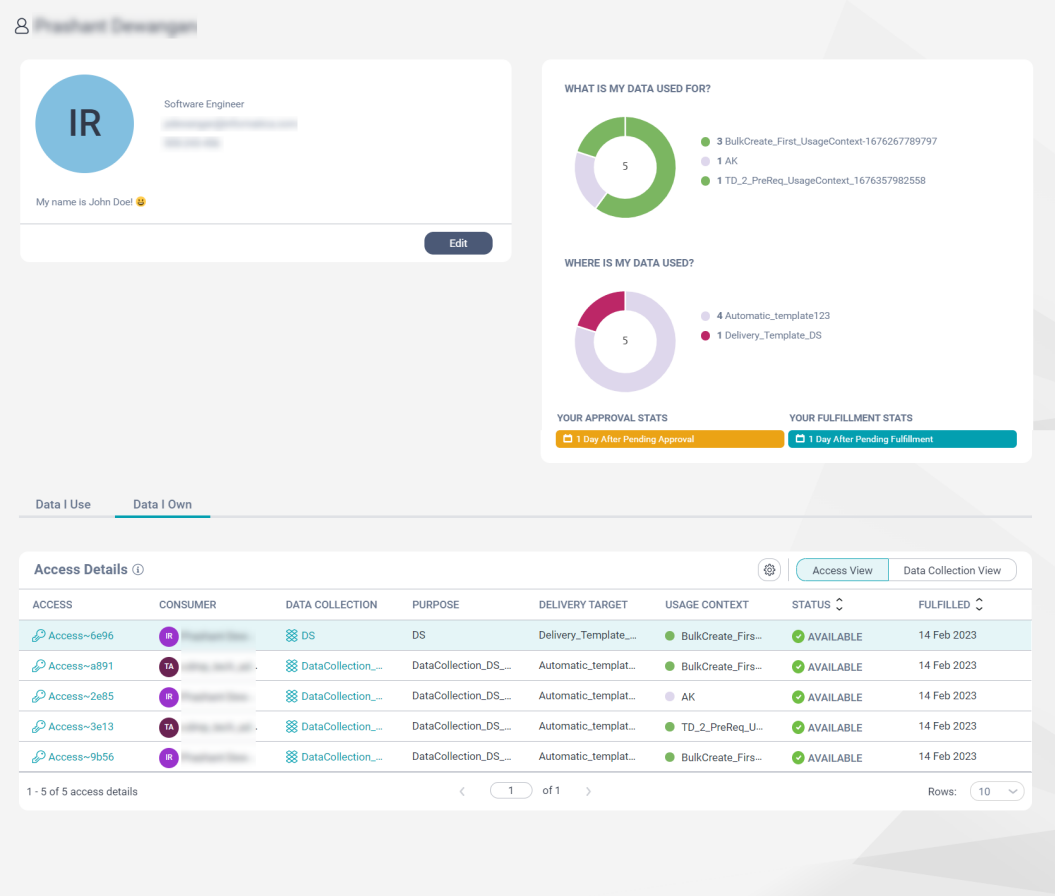

Where am I using data?

The **Where am I using data?** chart summarizes all of the locations where the data that you ordered was delivered for use. In this chart, you can view the count of your active consumer accesses and the top delivery templates that were used to deliver the data to you. You can also hover over the chart to reveal a tooltip that contains more details.

Data I Own tab

On your **My Data** page, you can view the data collections for which you or your group is assigned as a stakeholder.

The following image shows the **My Data** page for a stakeholder of a data collection:

Access View

Prerequisites

To view the consumer accesses on this tab, verify one of the following prerequisites:

- You are assigned as a stakeholder with one of the following stakeholder roles on a data collection that is associated with the consumer access:
  - Data Owner
  - Technical Owner
- You are assigned as a stakeholder on a data collection that is associated with the consumer access and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Approve or Reject Orders** or **Fulfill Or Reject Orders** privilege is enabled in Administrator.
  - **Read** permission for categories, data collections, delivery targets and usage contexts is enabled in Metadata Command Center.

On the **Access View** tab, you can view the details of the consumer accesses for your data collections.

The following table describes the fields that you can view in the **Access Details** grid:

Field	Description
Access ID	Reference identifier of the consumer access.
Data Collection	Name of the data collection.
Purpose	Purpose of the data collection as defined by a stakeholder of the data collection.
Delivery Target	Name of the delivery target used to deliver the data collection.
Delivery Template	Name of the delivery template that was used to create the delivery target.
Usage Context	The context within which the data is used as specified by the Data User at the time of order.
Status	Status of the consumer access. A consumer access can have one of the following statuses: - **Available**. The Data User has access to the data collection. - **Pending Withdraw**. A request is submitted to withdraw the Data User's access to the data collection. - **Withdrawn**. The Data User's access to the data collection is withdrawn.
Fulfilled	Date when the Data User received access to the data collection.

To filter the consumer accesses that are displayed in the **Access Details** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the consumer accesses that were fulfilled by you, click **Filter** and select the **Assigned to** filter. In the **Assigned to** filter, select the `Me` assignee and click **Filter** again to apply it. After you apply the filter, the **Access Details** grid displays only the consumer accesses that were fulfilled by you.

Data Collection View

Prerequisites

To view the data collections on this tab, verify one of the following prerequisites:

- You are assigned as a stakeholder with one of the following stakeholder roles on a data collection:
  - Data Owner
  - Technical Owner
- You are assigned as a stakeholder on a data collection and your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Approve or Reject Orders** or **Fulfill Or Reject Orders** privilege is enabled in Administrator.
  - **Read** permission for categories and data collections is enabled in Metadata Command Center.

On the **Data Collection View** tab, you can view the details of the data collections for which you or your group is responsible.

The following table describes the fields that you can view in the **Data Collections** grid:

Field	Description
Reference ID	Reference identifier of the data collection.
Name	Name of the data collection.
Purpose	Purpose of the data collection.
Category	Name of the category that contains the data collection.

To filter the data collections that are displayed in the **Data Collections** grid, click **Filter** and select the filter that you want to use. After you configure the filter, click **Filter** again to curate the grid based on how you configured the filter. For example, if you want to view only the data collections that are assigned to you, click **Filter** and select the **Assigned to** filter. In the **Assigned to** filter, select the `Me` assignee and click **Filter** again to apply it. After you apply the filter, the **Data Collections** grid displays only the data collections that are assigned to you.

Metrics

You can view the following metrics on the **My Data** page:

What is my data used for?

The **What is my data used for?** chart summarizes how the Data Users that received access to the data are using it. This chart uses the usage context that the Data Users specify when they order the data. You can also hover over the chart to reveal a tooltip that contains more details. You can view this information if you are assigned as a stakeholder of a data collection.

Where is my data used?

The **Where is my data used?** chart summarizes all of the locations where the data that you own was delivered for use. In this chart, you can view the count of the active consumer accesses and the top delivery templates that were used to deliver the data to the Data Users that ordered the data collections that you manage. You can also hover over the chart to reveal a tooltip that contains more details. You can view this information if you are assigned as a stakeholder of a data collection.

Your approval stats

You can use the **Your Approval Stats** metric to view the average of the number of days taken by you to approve orders.

Your fulfillment stats

You can use the **Your Fulfillment Stats** metric to view the average of the number of days taken by you to fulfill orders.

Switch between page layouts

Your administrator might customize the **My Data** page by creating a different layout for the page.

If you have multiple page layout options available to you, you can use the **Switch Layout** icon to switch between the layouts to view a different presentation of information on each layout. You can click the **Set As Default** icon next to a particular layout to set it as your personal default.

Collaboration in Data Marketplace

You can collaborate with other users in Data Marketplace. This allows you to enhance the quality of data that is available in your organization's Data Marketplace, and allows you to extract more business value from your organization's data.

Collaboration on objects

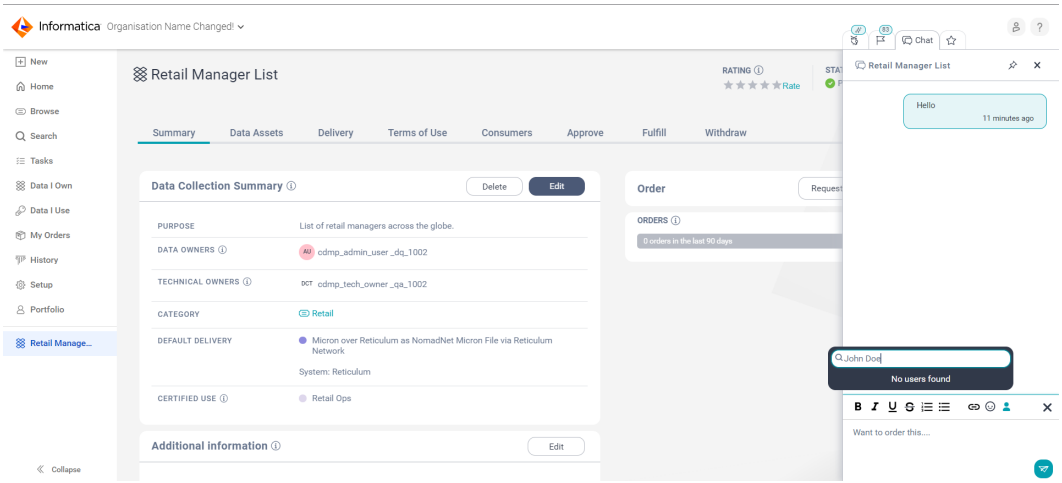

You can add your comments to Data Marketplace objects. Other users in your organization can see the comments and provide their own inputs. Commenters can tag other users in the comments and involve them in the discussion. This allows the Data Marketplace users in your organization to collaborate on objects and make collective decisions on how to use the data to make business decisions.

You can add your comments to the following object types:

- Category
- Data collection
- Data asset

  Note: You can add comments to only data assets that are native to Data Marketplace. To add comments to Data Governance and Catalog assets, open the asset in Data Governance and Catalog. For more information about how you can add comments to an asset in Data Governance and Catalog, see the Data Governance and Catalog help.

The following image depicts the **Chat** panel on a data collection page:

Prerequisites

To collaborate with users on category, data collection or data asset, verify one of the following prerequisites:

- Your user profile is assigned at least one of the predefined roles for Data Marketplace. For more information about the predefined roles for Data Marketplace, see "Predefined roles" on page 10.
- Your user profile is assigned a role for which the following privileges and permissions are enabled:
  - **Access Data Marketplace** privilege is enabled in Administrator.
  - **Read** permission for categories, data collections or data assets is enabled in Metadata Command Center.

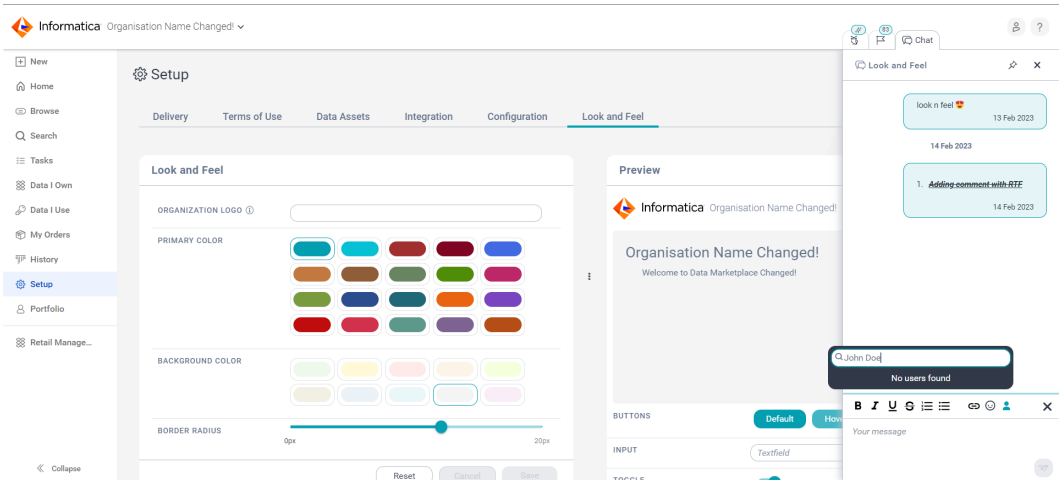

To access the collaboration section of an object, click the **Chat** icon. In the **Chat** panel, you can enter your comments and can also tag a stakeholder in a comment. To tag a user in your comment, enter the @ symbol and search for the user with their name or email address. When you tag a user, they receive a notification so that they can join the discussion. If you want to edit your comments, hover your pointer over the comment that you want to edit and click the **Edit** icon. To access the advanced text formatting options or to add emoticons, click the **Format Text** icon.

Note: Ensure that the user you tagged is also assigned the necessary permissions and privileges. Without the privileges and permissions, they won't be able to access your comment despite receiving the notification for it.

Collaboration on the Setup page

On the **Setup** page, you can add your comments in the **Chat** panel. You can use this feature to simplify the process of customizing Data Marketplace to fit the needs of your organization.

The following image shows the **Chat** panel where users can provide comments on the **Setup** page:

Prerequisites

To collaborate with users on the **Setup** page , verify one of the following prerequisites:

- Your user profile is assigned one of the following roles:
  - Delivery Owner
  - Technical Administrator
  - Data Marketplace Administrator
- Your user profile is assigned a role for which the **Access Data Marketplace** and **View Set up page** privileges are enabled in Administrator.

Each tab on the **Setup** page has a unique **Chat** panel. To access the collaboration section of an object, click the **Chat** icon. In the **Chat** panel, you can enter your comments. If you want to edit your comments, hover your pointer over the comment that you want to edit and click the **Edit** icon. To access the advanced text formatting options or to add emoticons, click the **Format Text** icon.

You can use the panel of the respective tab to collaborate with the stakeholders who are responsible for configuring the settings on the tab. To tag a stakeholder in your comment, enter the @ symbol and search for the respective stakeholder from the list of users. You can use the name or email address to search for a user. When you tag a user, they receive a notification so that they can join the discussion. This feature allows you to collaborate with other stakeholders on topics such as Marketplace appearance customization, terms of use definition, cost center configuration, and so on.

Note: Ensure that the user you tagged is also assigned the necessary privileges required to view the **Setup** page. Without the privileges and permissions, they won't be able to access your comment despite receiving the notification for it.

Notifications

You receive notifications in IDMC for certain events, including job status updates, license expiration, and workflow progress. You can manage how you receive notifications.

The Notifications icon on the toolbar displays the number of unread notifications. You can click the icon to view the latest unread notifications in the notifications tray. In some services, you can filter the tray to display only notifications from the current service.

You can also view and manage notifications on the **Notifications** page. To access the **Notifications** page, select **View All Unread** from the Actions menu in the notifications tray. On the **Notifications** page, you can filter notifications by service, category, subcategory, status, and date received.

Editing your user profile

Your user profile contains the details of your IDMC user account.

You can update the following information in your profile:

- First and last name
- Job title
- Email address
- Phone number
- Time zone (used in the job execution time stamps on the **All Jobs**, **Running Jobs**, **My Jobs**, **Import/Export Logs**, and **My Import/Export Logs** pages)
- Password
- Security question and answer

Note: If you use SAML to log in to IDMC and your organization administrator has enabled SAML group and role mapping on the **SAML Setup** page in Administrator, you can update the time zone attribute. Your enterprise directory updates the other attributes directly each time you log in to IDMC.

1. Click the **User** icon in the top right corner of the IDMC window and then select **Profile**.
2. On the **Profile** page, add or edit personal information such as your name, job title, phone number, and time zone.
3. To update your email address, click **Update Email**.

   After you enter your password to initiate the change, IDMC sends a verification email to your new email address. The email contains a link that's valid for 24 hours. When you click the link in the email, IDMC verifies the new address, and it appears in your profile. If the link expires, you can resend the verification email.

If multi-factor authentication is enabled in your organizaion, IDMC sends a verification code to your original email address. You must enter the code in the dialog box on your **Profile** page to receive the verification link in your new email address.

4. Optionally, change your password or security question.
5. Click **Save**.

Editing your user settings

In your user settings, you can configure personal preferences, including how you receive email notifications and your source control repository credentials.

To access user settings, click the **User** icon on the toolbar and then select **Settings**. The user settings page includes the following sections:

Notifications

Choose whether and how you receive email notifications.

For more information, see *User Administration* in the Administrator help.

Source Control Access

Configure repository credentials that allow you to work with source-controlled objects.

For more information, see *Organization Administration* in the Administrator help.

Note: Depending on which service you are in, the user settings page might appear different and show different names for the sections.

CHAPTER 4

Informatica resources

In addition to the online help, you can find information about Intelligent Data Management Cloud™ (IDMC) using the following resources.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

IDMC Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

Access the IDMC Community at:

https://network.informatica.com/community/informatica-network/products/cloud-integration

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security, compliance, and privacy practices.

You can access the trust center at https://trust.informatica.com/.

IDMC Pulse Dashboard

The IDMC Pulse Dashboard provides system status and upgrade information for all PODs and services across IDMC.

Follow the services you use and subscribe to alerts to receive notifications about upgrades, maintenance, production incidents, and upcoming releases. The IDMC Pulse Dashboard displays the production status of all the IDMC products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single service or all IDMC services. Subscribing to all services is the best way to be certain you never miss an update.

For more information, see the Service Status and Communications guide.

Informatica Product Availability Matrices

Product Availability Matrices (PAMs) indicate the versions of the operating systems, databases, and types of data sources and targets that a product release supports. You can browse the Informatica PAMs at https://network.informatica.com/community/informatica-network/product-availability-matrices.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
