Preface

Read the *What's New* for a brief overview of new features, enhancements and behavior changes in Data Marketplace.

CHAPTER 1

October 2026

This chapter includes the following topics:

- Changelog October 2026, 5
- New features and enhancements, 6
- Changed behavior, 7

Changelog October 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
October 22, 2026	Added	"Data Marketplace APIs using JWT authentication" on page 6
October 1, 2026	Added	"Enhancements to the Data Quality tab" on page 6
October 1, 2026	Added	"Manually refresh for search results" on page 7
October 1, 2026	Modified	"Changes to Data Quality fields" on page 7
October 1, 2026	Modified	"Additional metadata for Consumer Access Details" on page 7
September 17, 2026	Initial publication	

New features and enhancements

The October 2026 release of Data Marketplace includes the following new features and enhancements.

Data Marketplace APIs using JWT authentication

You can use REST APIs to perform the following tasks by using JSON web token authentication:

- Create, retrieve, modify, or delete a data asset.
- Retrieve the data collections associated with a data asset.
- Create, modify, or delete a data element.
- Retrieve the data elements of a data asset.
- Create or modify a data quality rule of a data element.
- Create, retrieve, fulfill, cancel, or reject a data collection request.
- Create, retrieve, or modify a delivery format.
- Create, retrieve, or modify a delivery method.
- Create, retrieve, or modify a delivery template.
- Create, retrieve, or modify a terms of use.
- Create, retrieve, or modify technical content.
- Create, retrieve, or modify a usage context.

For more information about how you can use JWT authentication to invoke APIs, see the *Authenticate using JWT* topic in the *API Reference* help.

Enhancements to the Data Quality tab

The October release includes the following enhancements to the **Data Quality** tab of the data collection and data asset pages:

View business names

In the **Data Quality Rules** grid, you can view the business name for each data element or data quality rule in the **Business Name** column.

Sort and filter for Data Quality rules

On the **Data Quality** tab for data collection and data asset pages, you can sort the values of the following columns :

- **Rule Name**
- **Dimension**
- **Latest Score**
- **Score Data**

On the **Data Quality** tab for data collection and data asset pages,, you can use the following columns to filter the data quality rules:

- **Rule Name**
- **Primary Data Element**
- **Business Name**
- **Dimension**
- **Latest Score**

For more information about the Data Quality tab for data collections and data assets, see *Data Collections* and *Data Assets* in *Introduction and Getting Started*.

Review data collections in the Usage Guide

On the **Usage Guide** stage of a cart checkout, you can view the data collections that are related to each of the terms of use.
For more information about ordering data collections, see *Order data collections* in the *Working with Data Collections* help.

Find data assets in a data collection

On the **Data Asset** tab of a data collection page, you can use the find bar to search for data assets within the data collection. Enter the names, descriptions, or business names of the assets you want to find.

For more information about data assets, see *Data Assets tab* in the *Introduction and Getting Started* help.

Additional metadata for Consumer Access Details

On the **Consumer Access** grid of a data collection, you can add columns for **Delivery Target** and **Business Justification**. You can add these columns when you modify the grid or create a custom page layout.

For more information about designing page layouts, see *Design a page layout* in the *Set Up Data Marketplace* help.

Changed behavior

The October 2026 release of Data Marketplace includes the following changed behavior.

Changes to Data Quality fields

The **Data Quality** and **Data Quality Per Data Set** fields are renamed to **Average Data Quality** and **Average Data Quality Per Data Set**. The fields also show Data Quality scores as percentages. The scores don't change but the new format more accurately reflect what the scores represent. A data asset's data quality score is an average of the data quality scores of its data elements.

For more information about the data quality score of a data asset, see *Data Assets tab* in the *Introduction and Getting Started* help.

Manually refresh for search results

When you return to the **Search** page, Data Marketplace retains the results of your latest search instead of refreshing them. To refresh your results, click **Search**.

Previously, Data Marketplace refreshed the results of the **Search** page automatically.

For more information about searching for and viewing data collections, see "Search and view data collections" in *Working with Data Collections*.

CHAPTER 2

April 2026

The following topics provide information about new features, enhancements, and changes in the April 2026 release of Data Marketplace.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
April 16, 2026	Added	"Unique tab for each data collection request" on page 12
March 11, 2026	Initial publication	

Important notices

The April 2026 release of Data Marketplace includes the following important notices.

Compare now included in My Cart

The navigation panel on the left no longer shows the **Compare** page. Instead, compare is included within the **My Cart** page which is found in the header on the right corner.

The **My Cart** experience preserves the compare functionality so you can compare data collections that you add to your cart.

New features and enhancements

The April 2026 release of Data Marketplace includes the following new features and enhancements.

Watch the following What's New video to learn about the new features and enhancements in the April 2026 release:

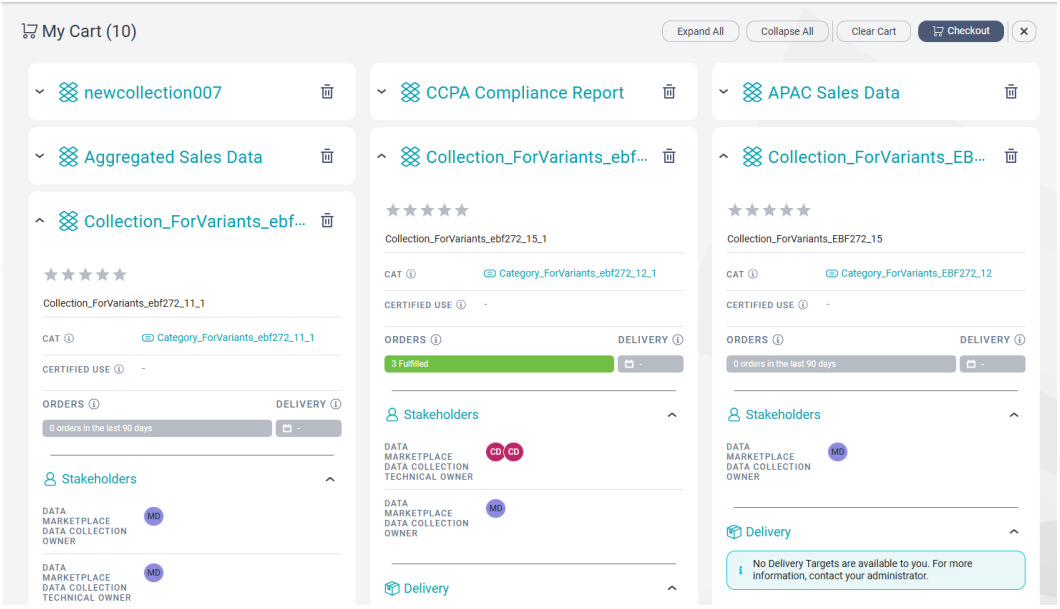

Ordering multiple data collections using My Cart

Data Marketplace introduces the **My Cart** page from where you can order multiple data collections simultaneously.
The **My Cart Checkout** process provides you the flexibility to use the same details for all the data collections that you order, or to specify different information for each data collection in your cart.

You can also use the **My Cart** page to compare data collections that interest you. You can compare and order up to 10 data collections from **My Cart**.

Note: Ordering multiple data collections provides a new capability to how you order data collections. You can still order a single data collection in Data Marketplace using the **Checkout** button.

The following image shows the **My Cart** page:

For more information about ordering data collections, see *Order data collections* in the *Working with Data Collections* help.

Enhancements for Data Governance and Catalog integration

Import all assets from Data Governance and Catalog

You can import all business and technical assets from Data Governance and Catalog into Data Marketplace. The import includes existing business assets, predefined and custom catalog sources, and assets that you add to Data Governance and Catalog.

The new asset types that you import from Data Governance and Catalog after this upgrade will not be available for use by default regardless of their compatibility values. You must manually enable them for use if you want to add additional asset types.

Search, activate, and filter asset types

In the **Data Governance and Catalog Asset Types** section, you can search for asset types that are imported from Data Governance and Catalog.

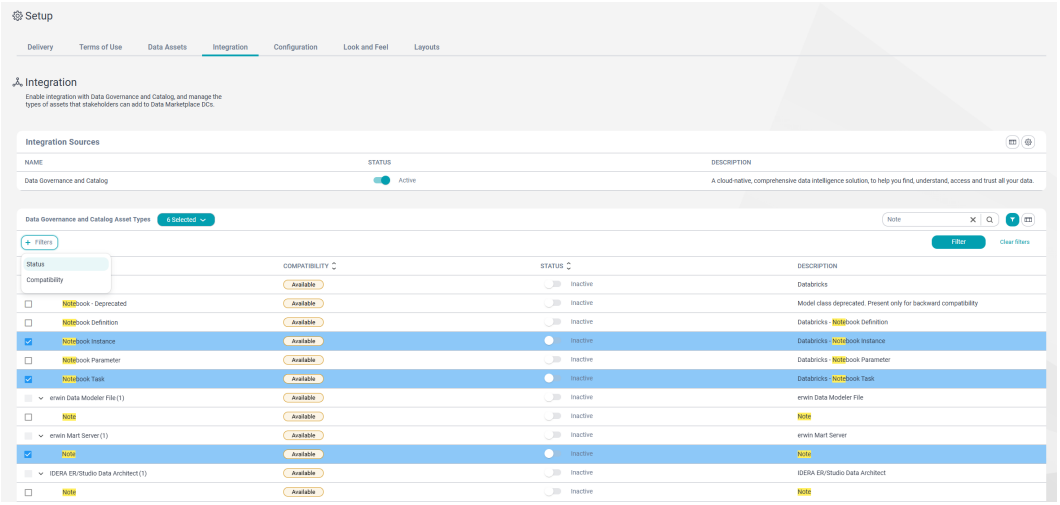

For assets that are not activated, you can select multiple inactive asset types and activate them simultaneously.

You can also apply filters based on status and compatibility to refine your search results.

Hierarchy for asset types

When you search for an asset type, the **Data Governance and Catalog Asset Types** section shows assets in an hierarchical view. If you select assets, you select only the searched asset and not the parent assets.

The following image shows the **Integration** tab:

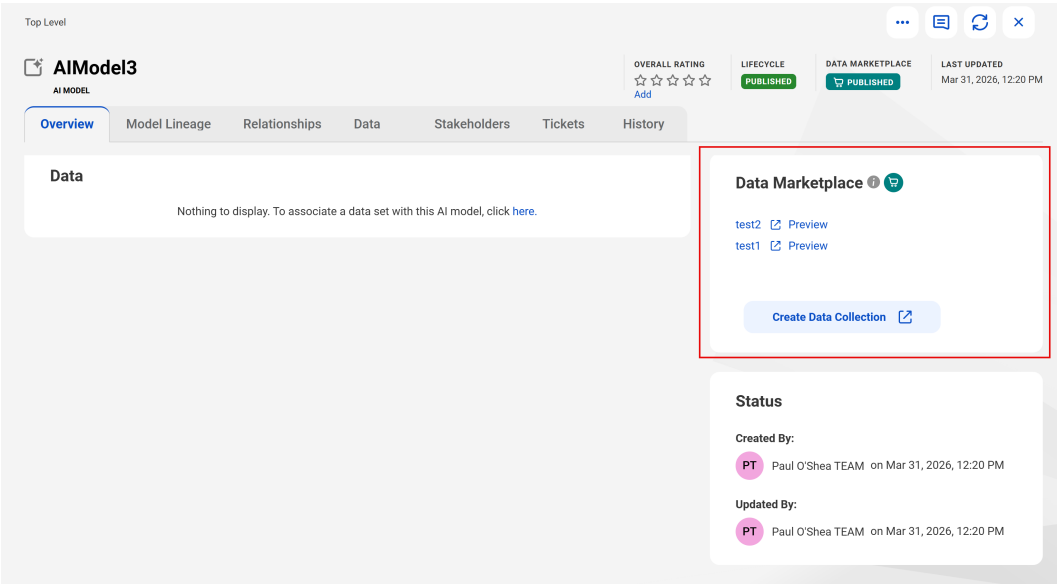

For more information about integrating Data Governance and Catalog, see *Enrich data collections with Data Governance and Catalog* in the *Set Up Data Marketplace* help.

Create data collections from Data Governance and Catalog

From an asset page in Data Governance and Catalog, you can create a data collection in Data Marketplace. You can create data collections for asset types that are enabled for use from the **Integration** tab on the **Setup** page in Data Marketplace.

The following image shows a Data Governance and Catalog asset page:

For more information about creating a data collection, see *Creating data collections* in the *Working with Data Collections* help.

Changed behavior

The April 2026 release of Data Marketplace includes the following changed behavior.

Enhancements to custom layouts

When you modify an item with a custom layout applied, Data Marketplace displays only the attributes that are also visible outside edit mode.

The following items have a consistent experience between view and edit modes:

- Category
- Consumer access
- Data asset
- Data collection

Previously, in edit mode, Data Marketplace displayed all configured attributes for an item, including the attributes that were excluded from the custom layout.

Auto-population of asset type descriptions

When you import assets from Data Governance and Catalog, asset type descriptions are auto-populated from the source. The asset type descriptions provide context that is consistent with the source.

Previously, asset type descriptions were inconsistent with the integration source.

Unique tab for each data collection request

When you request a new data collection, Data Marketplace opens a new tab for each request.

Previously, opening a new data collection request while one was already open in a tab would cause Data Marketplace to update the existing tab.
