Index **33**

Preface

Follow the instructions in *MDM Extension for Microsoft Fabric* to deploy MDM Extension for Microsoft Fabric.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing MDM Extension for Microsoft Fabric

An MDM SaaS extension is a ready-to-use package that streamlines and accelerates the implementation of MDM SaaS. MDM SaaS extensions contain pre-configured assets and integrations that extend and enhance the MDM SaaS business applications. Use an extension to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Use MDM Extension for Microsoft Fabric to publish master data from MDM SaaS to Microsoft Fabric. You can leverage the published data for various analytics and reporting use cases, such as enhanced customer insights and supply chain analytics. You can also monitor sustainable sourcing, risks, and ESG data compliance of a supplier.

Use predefined Data definition language (DDL) scripts in MDM Extension for Microsoft Fabric to create staging schema and analytical schema in Microsoft Fabric Data Warehouse. You can use predefined batch jobs to pubish master data from MDM SaaS to staging tables in Microsoft Fabric Data Warehouse. You can use predefined Data Integration assets to load data from the staging tables into the dimension and fact tables of the analytical schema in Microsoft Fabric Data Warehouse.

Use MDM Extension for Microsoft Fabric to achieve the following goals:

Enhance customer analytics and insights

Provide accurate customer segmentation and measures, such as loyalty and lifetime value, for personalized customer experience and improved customer satisfaction.

Improve supply chain agility and omnichannel commerce

Improve the visibility of a supplier network, spending, performance, risk and ratings. You can streamline the management of large and dynamic product portfolios.

Analyze ESG risk of a supply chain

Calculate supply chain emissions, identify suppliers with the highest impact, and reduce ESG risks.

Enhance strategies using location-based analytics

Use location-based insights, such as sales performance and trends by store location and inventory analysis by warehouse location, to drive strategic decisions. Leverage these insights to launch effective marketing campaigns, enhance sales opportunities, and assess revenue.

Guidelines for importing assets

Consider the following guidelines before you import the extension assets:

- Set up the prerequisite MDM SaaS business application.
- Import the extension assets before you customize the business entities. You can safely import multiple extension assets that use different business entities and in different MDM SaaS business applications. When you import the assets in an environment that already has an extension with the same business entities, the import fails.
- After you import the assets, consider them as your custom assets.
- Once you deploy an extension, upgrading to a newer version of the extension isn't supported.

Guidelines for migrating assets

Consider the following guidelines before you migrate the extension assets to another environment:

- To migrate the extension assets to higher environments, such as QA and production, export the assets from the development environment. Then, import them into the QA and production environments. For more information about migrating assets, see *Migrating projects and assets*.
- Don't import the extension assets again into a higher environment.

Prerequisites

Before you deploy the MDM Extension for Microsoft Fabric, perform the following prerequisites:

- Ensure that you have the license for the Integration Components for Business 360, MDM SaaS edition, and Microsoft Fabric Data Warehouse Connector.
- Ensure you have set up the Azure service principal to automate secure access and operations between Microsoft Fabric and Azure services for publishing reports and dashboards in Power BI. For more information about Azure service principal, see the *Microsoft Azure* documentation.
- Ensure that you have the licenses required to manage connections, external data, and service rights.

  Note: The use of the industry 360 application doesn't confer any additional license or entitlement to license consumption beyond the terms specified in the applicable licensing agreements.
- Ensure that the version of the industry 360 application package matches the current MDM SaaS version where you import the industry 360 application assets.

  If the version of the industry 360 application package doesn't match the current MDM SaaS version, contact Informatica Global Customer Support to use the current version of the industry 360 application.

  To verify the MDM SaaS version, in Business 360 Console, click **About** in the IDMC Help menu and verify the build version.

  To verify the version of the industry 360 application, navigate to the readme.txt file in the extracted industry 360 application package.

CHAPTER 2

MDM SaaS and Microsoft Fabric integration

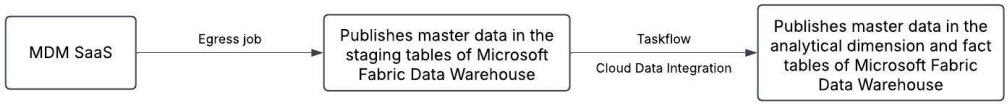

Use MDM Extension for Microsoft Fabric to integrate MDM SaaS with Microsoft Fabric.

Use the MDM SaaS batch jobs and Cloud Data Integration assets to publish data from MDM SaaS to Microsoft Fabric.

Data flow to publish master data to Microsoft Fabric

You can use egress jobs to publish master data from MDM SaaS to the staging tables of Microsoft Fabric. Use Cloud Data Integration taskflows to publish data from the staging tables into the analytical dimension and fact tables of Microsoft Fabric.

The following image shows the flow of data from MDM SaaS to Microsoft Fabric:

When you run MDM SaaS egress jobs, the job exports MDM SaaS master data, such as customer, location, product, and supplier master data, into the staging tables of Microsoft Fabric Data Warehouse.

When you run Cloud Data Integration taskflows, Cloud Data Integration transforms and publishes data from the staging tables into the analytical dimension and fact tables of Microsoft Fabric Data Warehouse.

MDM SaaS master data

Based on your MDM SaaS domain, MDM Extension for Microsoft Fabric uses its corresponding data model.

The following table lists the MDM SaaS domains and their corresponding data model details:

MDM SaaS Domain	Data Model Reference
Customer	*Customer 360 SaaS data dictionary*
Location	*Location 360 data dictionary*
Product	*Product 360 SaaS data dictionary*
Supplier	*Supplier 360 Extension for ESG data dictionary*

Staging schema

Use predefined egress jobs to publish master data from MDM SaaS to the staging schema in Microsoft Fabric Data Warehouse.

When you run egress jobs based on the type of records that you manage in MDM SaaS, the master data is published into the tables of the staging schema in Microsoft Fabric Data Warehouse.

Analytical schema

An analytical schema is a repository for master and transactional data in Microsoft Fabric Data Warehouse. Use the analytical schema to gain insights into the data.

When you run Cloud Data Integration taskflows, Cloud Data Integration transforms and publishes master data from the staging tables into the dimension and fact tables of the analytical schema in Microsoft Fabric Data Warehouse.

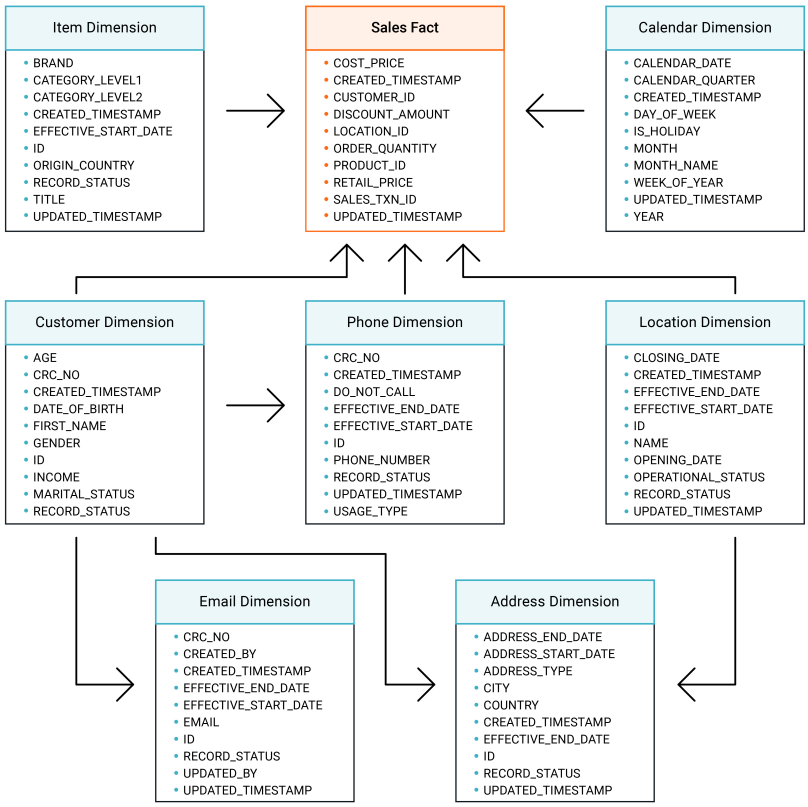

The analytical schema includes the following dimension and fact tables:

- tbl_address_dim
- tbl_calendar_dim
- tbl_customer_dim
- tbl_email_dim
- tbl_esg_score_dnb_dim
- tbl_esg_score_dnb_environmental_reason_dim
- tbl_esg_score_dnb_governance_reason_dim
- tbl_esg_score_dnb_social_reason_dim
- tbl_item_dim
- tbl_location_dim

- tbl_phone_dim
- tbl_supplier_dim
- tbl_sales_txn_fact
- tbl_supplier_order_txn_fact

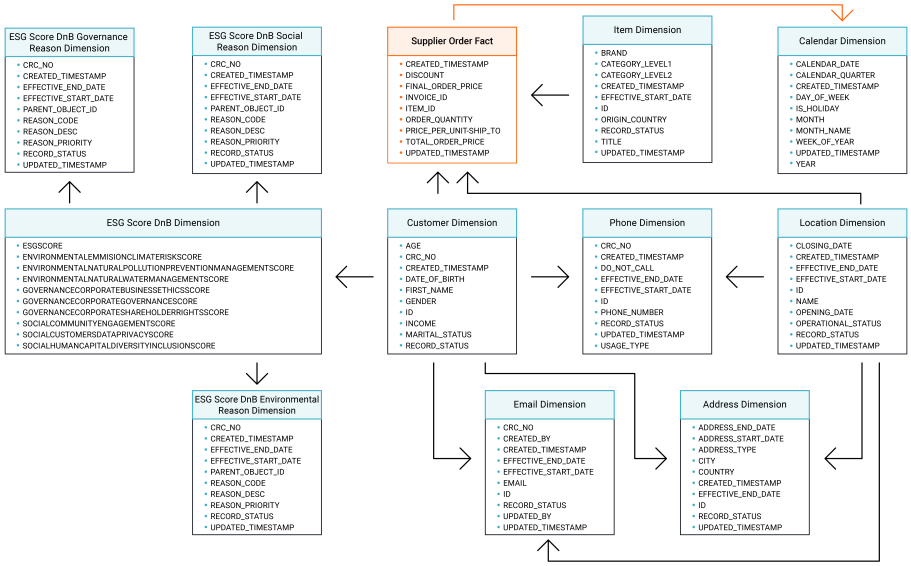

Based on your use case, you can create or edit the dimension and fact tables.

The following image shows the dimension tables of the Microsoft Fabric analytical schema and their relationships with the Sales fact table:

Note: Some tables contain more fields than shown in the diagram. For details, refer to the analytical schema in Microsoft Fabric Data Warehouse.

The following image shows the dimension tables of the Microsoft Fabric analytical schema and their relationships with the Supplier Order fact table:

Note: Some tables contain more fields than shown in the diagram. For details, refer to the analytical schema in Microsoft Fabric Data Warehouse.

CHAPTER 3

Predefined MDM Extension for Microsoft Fabric assets

The extension package includes the following predefined assets:

- Data definition language (DDL) scripts to create the staging schema, analytical schema, and views in Microsoft Fabric.
- MDM SaaS batch jobs
- Cloud Data Integration assets
- Secure Agent group parameter files

Note: When you import the MDM Extension for Microsoft Fabric assets, the existing MDM SaaS assets and your customizations are overwritten. Ensure that you import the assets of the extension before you customize the MDM SaaS data model.

Data Definition Language (DDL) scripts

Use DDL scripts to create the staging schema, analytical schema, and views in Microsoft Fabric.

MDM Extension for Microsoft Fabric includes scripts to create a staging and analytical schema in Microsoft Fabric Data Warehouse.

MDM Extension for Microsoft Fabric also includes scripts to create views. Views are logical tables defined using SQL queries. When you run an SQL query in Microsoft Fabric, you can use the views to visualize data in Microsoft Fabric.

Cloud Data Integration assets

MDM Extension for Microsoft Fabric includes predefined egress jobs and Cloud Data Integration assets. You can use predefined egress jobs to publish master data from MDM SaaS to the staging tables in Microsoft Fabric. You can then use predefined Cloud Data Integration taskflows to publish data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric.

Assets for customer data

Use predefined egress jobs to export master data from Customer 360 SaaS to the staging tables in Microsoft Fabric. Use the predefined Cloud Data Integration taskflow to publish data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric.

The following table lists the predefined egress jobs and their dependent assets to export master data from Customer 360 SaaS to Microsoft Fabric.

Job Name	Taskflow	Mapping Task	Mapping	Description
- infa360Fabric_customer_egress_org_Fabric_outbound_org_stage - infa360Fabric_customer_egress_org_Fabric_outbound_org_xref_stage	- infa360Fabric_customer_tf_org_Fabric_outbound_org_stage - infa360Fabric_customer_tf_org_xref_Fabric_outbound_org_xref_stage	- infa360Fabric_customer_mt_org_indicator_Fabric_outbound_org_indicator - infa360Fabric_customer_mt_org_taxdetails_Fabric_outbound_org_taxdetails - infa360Fabric_customer_mt_org_stockexchange_Fabric_outbound_org_stockexchange - infa360Fabric_customer_mt_org_segment_Fabric_outbound_org_segment - infa360Fabric_customer_mt_org_root_Fabric_outbound_org_customer - infa360Fabric_customer_mt_org_status_Fabric_outbound_org_status - infa360Fabric_customer_mt_org_phone_Fabric_outbound_org_phone - infa360Fabric_customer_mt_org_financial_Fabric_outbound_org_financial - infa360Fabric_customer_mt_org_keyexecutive_Fabric_outbound_org_keyexecutive - infa360Fabric_customer_mt_org_socialhandle_Fabric_outbound_org_socialhandle - infa360Fabric_customer_mt_org_document_Fabric_outbound_org_document - infa360Fabric_customer_mt_org_address_Fabric_outbound_org_address	- infa360Fabric_customer_m_org_address_Fabric_outbound_org_address - infa360Fabric_customer_m_org_root_Fabric_outbound_org_customer - infa360Fabric_customer_m_org_email_Fabric_outbound_org_email - infa360Fabric_customer_m_org_insurance_Fabric_outbound_org_insurance - infa360Fabric_customer_m_org_taxdetails_Fabric_outbound_org_taxdetails - infa360Fabric_customer_m_org_financial_Fabric_outbound_org_financial - infa360Fabric_customer_m_org_stockexchange_Fabric_outbound_org_stockexchange - infa360Fabric_customer_m_org_socialhandle_Fabric_outbound_org_socialhandle - infa360Fabric_customer_m_org_status_Fabric_outbound_org_status - infa360Fabric_customer_m_org_document_Fabric_outbound_org_document - infa360Fabric_customer_m_org_keyexecutive_Fabric_outbound_org_keyexecutive - infa360Fabric_customer_m_org_identifier_Fabric_outbound_org_identifier - infa360Fabric_customer_m_org_indicator_Fabric_outbound_org_indicator - infa360Fabric_customer_m_org_phone_Fabric_outbound_org_phone	Exports organization data from Customer 360 SaaS to the staging tables in Microsoft Fabric.

Job Name	Taskflow	Mapping Task	Mapping	Description
		- infa360Fabric_customer_mt_org_email_Fabric_outbound_org_email - infa360Fabric_customer_mt_org_insurance_Fabric_outbound_org_insurance - infa360Fabric_customer_mt_org_identifier_Fabric_outbound_org_identifier - infa360Fabric_customer_mt_org_alternateName_Fabric_outbound_org_alternateName - infa360Fabric_customer_mt_org_xref_Fabric_outbound_org_xref	- infa360Fabric_customer_m_org_alternateName_Fabric_outbound_org_alternateName - infa360Fabric_customer_m_org_segment_Fabric_outbound_org_segment - infa360Fabric_customer_m_org_xref_Fabric_outbound_org_xref

Job Name	Taskflow	Mapping Task	Mapping	Description
		socialmedia_Fabric_outbound_contact_socialmedia - infa360Fabric_supplier_mt_contact_status_Fabric_outbound_contact_status - infa360aFabric_supplier_mt_contact_xref_Fabric_outbound_contact_xref	- infa360Fabric_supplier_m_contact_status_Fabric_outbound_contact_status - infa360Fabric_supplier_m_contact_xref_Fabric_outbound_contact_xref	

The following table lists the predefined taskflows, mapping tasks, and mappings to publish supplier data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric:

Taskflow	Mapping Task	Mapping	Description
- infa360_tf_fabric_supplier_stage_fabric_retail_analytics - infa360_tf_fabric_txn_stage_fabric_retail_analytics	- infa360_mt_azure_dim_azure_tbl_sales_txn_fact - infa360_mt_azure_dim_azure_tbl_supplier_order_txn_fact - infa360_mt_azure_stage_azure_tbl_esg_score_dnb_dim - infa360_mt_fabric_stage_fabric_tbl_esg_score_dnb_environmental_reason_dim - infa360_mt_fabric_stage_fabric_tbl_esg_score_dnb_governance_reason_dim - infa360_mt_fabric_stage_fabric_tbl_esg_score_dnb_social_reason_dim - infa360_mt_fabric_supplier_stage_fabric_tbl_address_dim - infa360_mt_fabric_supplier_stage_fabric_tbl_email_dim - infa360_mt_fabric_supplier_stage_fabric_tbl_phone_dim - infa360_mt_fabric_stage_fabric_tbl_supplier_dim	- infa360_m_fabric_supplier_stage_fabric_tbl_address_dim - infa360_m_fabric_supplier_stage_fabric_tbl_email_dim - infa360_m_fabric_supplier_stage_fabric_tbl_phone_dim - infa360_m_azure_dim_azure_tbl_sales_txn_fact - infa360_m_azure_dim_azure_tbl_supplier_order_txn_fact - infa360_m_azure_stage_azure_tbl_esg_score_dnb_dim - infa360_m_fabric_stage_fabric_tbl_esg_score_dnb_environmental_reason_dim - infa360_m_fabric_stage_fabric_tbl_esg_score_dnb_governance_reason_dim - infa360_m_fabric_stage_fabric_tbl_esg_score_dnb_social_reason_dim - infa360_m_fabric_stage_fabric_tbl_supplier_dim	Publishes supplier data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric.

Assets for location data

Use predefined egress jobs to export master data from Multidomain MDM SaaS to the staging tables in Microsoft Fabric. Use the predefined Cloud Data Integration taskflow to publish data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric.

The following table lists the predefined egress jobs and their dependent assets to export master data from Multidomain MDM SaaS to Microsoft Fabric.

Job Name	Taskflow	Mapping Task	Mapping	Description
- infa360Fabric_location_egress_Fabric_outbound_location_stage - infa360Fabric_location_egress_xref_outbound_location_xref	- infa360Fabric_location_tf_multidomain_location_Fabric_outbound_location_stage - infa360Fabric_location_tf_multidomain_location_xref_outbound_location_xref	- infa360Fabric_location_mt_location_status_Fabric_outbound_location_status - infa360Fabric_location_mt_location_indicator_Fabric_outbound__location_indicator - infa360Fabric_location_mt_location_email_Fabric_outbound_location_email - infa360Fabric_location_mt_location_root_Fabric_outbound_location_root - infa360Fabric_location_mt_location_operatingHours_Fabric_outbound_location_operatingHours - infa360Fabric_location_mt_location_phone_Fabric_outbound_location_phone - infa360Fabric_location_mt_location_identifier_Fabric_outbound_location_identifier - infa360Fabric_location_mt_location_altName_Fabric_outbound_location_altName - infa360Fabric_location_mt_location_positions_Fabric_outbound_location_positions - infa360Fabric_location_mt_location_address_Fabric_outbound_location_address - infa360Fabric_location_mt_location_operatingHoursException_Fabric_outbound_location_	- infa360Fabric_location_m_location_email_Fabric_outbound_location_email - infa360Fabric_location_m_location_address_Fabric_outbound_location_address - infa360Fabric_location_m_location_altName_Fabric_outbound_location_altName - infa360Fabric_location_m_location_indicator_Fabric_outbound__location_indicator - infa360Fabric_location_m_location_operatingHours_Fabric_outbound_location_operatingHours - infa360Fabric_location_m_location_status_Fabric_outbound_location_status - infa360Fabric_location_m_location_geoloc_Fabric_outbound_location_geoloc - infa360Fabric_location_m_location_identifier_Fabric_outbound_location_identifier - infa360Fabric_location_m_location_positions_Fabric_outbound_location_positions - infa360Fabric_location_m_location_root_Fabric_outbound_location_root - infa360Fabric_location_m_location_coordinates_Fabric_outbound_location_coordinates - infa360Fabric_location_m_location_operatingHoursException_outbound_location_operatingHoursException - infa360Fabric_location_m_location_phone_Fabric_outbound_location_phone	Exports location data from Multidomain MDM SaaS to the staging tables in Microsoft Fabric.

Job Name	Taskflow	Mapping Task	Mapping	Description
		operatingHoursException - infa360Fabric_location_mt_location_coordinates_Fabric_outbound_location_coordinates - infa360Fabric_location_mt_location_geoloc_Fabric_outbound_location_geoloc - infa360Fabric_location_mt_location_xref_Fabric_outbound_location_xref	- infa360Fabric_location_m_location_xref_Fabric_outbound_location_xref	

The following table lists the predefined taskflow, mapping tasks, and mappings to publish location data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric:

Taskflow	Mapping Task	Mapping	Description
infa360_tf_fabric_location_stage_fabric_retail_analytics	- infa360_mt_fabric_location_stage_fabric_tbl_address_dim - infa360_mt_fabric_location_stage_fabric_tbl_email_dim - infa360_mt_fabric_location_stage_fabric_tbl_phone_dim - infa360_mt_fabric_stage_fabric_tbl_location_dim	- infa360_m_fabric_location_stage_fabric_tbl_address_dim - infa360_m_fabric_location_stage_fabric_tbl_email_dim - infa360_m_fabric_location_stage_fabric_tbl_phone_dim - infa360_m_fabric_stage_fabric_tbl_location_dim	Publishes location data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric.

CHAPTER 4

Deploying MDM Extension for Microsoft Fabric

Before you deploy MDM Extension for Microsoft Fabric, ensure that you have the license for the Integration Components for Business 360 and the MDM SaaS edition.

To deploy MDM Extension for Microsoft Fabric, perform the following tasks:

1. Download and extract the extension package.
2. Create a workspace and warehouse in Microsoft Fabric.
3. Run the DDL scripts to create schemas in Microsoft Fabric.
4. Run the DDL scripts to create staging and analytical tables in Microsoft Fabric.
5. Import Cloud Data Integration assets.
6. Import the MDM SaaS batch jobs.
7. Set the Secure Agent parameters.
8. Run egress jobs and taskflows.

Extracting the MDM Extension for Microsoft Fabric package

Download the MDM Extension for Microsoft Fabric package to a directory on your computer.

To get the link to the download the MDM Extension for Microsoft Fabric package, contact Informatica Global Customer Support.

After you download the MDM Extension for Microsoft Fabric package, extract the package on your computer.

The extracted package contains the following files and folders:

File or Folder Name	Description
`1_Fabric_Staging`	Folder that contains the `Fabric_Staging.zip` file. The `Fabric_Staging.zip` file contains scripts to create schemas and staging tables in Microsoft Fabric.
`2_Fabric_Analytics`	Folder that contains the `Fabric_Analytics.zip` file. The `Fabric_Analytics.zip` file contains scripts to create the analytical dimension, fact tables, and views in Microsoft Fabric.

File or Folder Name	Description
3_DI_Assets_Staging	Folder that contains the following files: - Customer_Staging.zip. Contains Cloud Data Integration assets to write customer data to the Microsoft Fabric staging tables. - Location_Staging.zip. Contains Cloud Data Integration assets to write location data to the Microsoft Fabric staging tables. - Product_Staging.zip. Contains Cloud Data Integration assets to write product data to the Microsoft Fabric staging tables. - Supplier_Staging.zip. Contains Cloud Data Integration assets to write supplier data to the Microsoft Fabric staging tables.
4_DI_Assets_Analytics	Folder that contains the DI_Assets_Analytics.zip file. The DI_Assets_Analytics.zip file contains Cloud Data Integration assets to write data from the staging tables into analytical dimension and fact tables in Microsoft Fabric.
5_MDM_Jobs_Assets_Staging	Folder that contains the following files: - Customer_Jobs_Assets_Staging.zip. Contains jobs to publish customer data to the Microsoft Fabric staging tables. - Location_Jobs_Assets_Staging.zip. Contains jobs to publish location master data to the Microsoft Fabric staging tables. - Product_Jobs_Assets_Staging.zip. Contains jobs to publish product master data to the Microsoft Fabric staging tables. - Supplier_Jobs_Assets_Staging.zip. Contains jobs to publish supplier master data to the Microsoft Fabric staging tables.
Secure Agent Files	Contains parameter values for the Cloud Data Integration mappings.

Creating a workspace and warehouse in Microsoft Fabric

After you download and extract the extension package, create a workspace in Microsoft Fabric, and then create a warehouse in the workspace.
For more information about creating a workspace and warehouse, see the *Microsoft Fabric* documentation.

Creating schemas in Microsoft Fabric

After you you create a warehouse in Microsoft Fabric, run the DDL scripts in Microsoft Fabric to create staging and analytical schemas.

1. Open the SQL query editor in Microsoft Fabric.
2. Navigate to the following file:

   `<Extracted extension package>/1_Fabric_Staging/Fabric_Staging.zip/1_db.sql`
3. Copy the DDL scripts from the file to SQL query editor, and click **Run**.

   The staging schema and analytical schema are created in Microsoft Fabric.

Creating staging and analytical tables in Microsoft Fabric

After you create the schemas in Microsoft Fabric, run the DDL scripts in Microsoft Fabric to create the staging tables and analytical dimension and fact tables.
To create the staging tables in Microsoft Fabric, copy scripts from the following location to the SQL query editor, and click **Run**:

```
<Extracted extension package>1_Fabric_Staging/Fabric_Staging.zip/<Domain>_Stage.sql
```

To create the analytical dimension and fact tables in Microsoft Fabric, copy scripts from the following location to the SQL query editor, and click **Run**:

```
<Extracted extension package>2_Fabric_Analytics/Fabric_Analytics.zip
```

Importing the Cloud Data Integration assets

Import the Cloud Data Integration assets, such as predefined taskflows, mapping tasks, and mappings for the staging and analytical schema in Microsoft Fabric.

Note: When you import the extension assets, the existing MDM SaaS assets and your customizations are overwritten. Ensure that you import the extension assets before you customize the MDM SaaS data model.

1. In Data Integration, click **Explore** > **Import**.
2. Navigate to the following file:

   ```
   <Extracted extension package>/3_DI_Assets_Staging/<Domain>_Staging.zip
   ```
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected, and then click **Test**.

   In the **Select Assets** section, you can see the potential outcome of import for each asset.
5. Click **Import**.
6. On the **My Import/Export Logs** page, verify whether the import job is successful.
7. Navigate to the following file and repeat steps 3 through 6:

   ```
   <Extracted extension package>/4_DI_Assets_Analytics/DI_Assets_Analytics.zip
   ```

Importing the batch job assets

Import the predefined batch job assets to publish MDM SaaS master data into the staging schema in Microsoft Fabric.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   ```
   <Extracted extension package>/5_MDM_Jobs_Assets_Staging/<Domain>_Jobs_Assets_Staging.zip
   ```
3. Click **Open**.

The **Import Assets** page lists the assets in the file.

4. Ensure that all the assets are selected, and click **Import**.
5. On the **My Import/Export Logs** page, verify whether the import job is successful.

Setting up the Secure Agent parameters

After you import the MDM SaaS batch jobs, set the Secure Agent parameters.

1. In Administrator, click **Runtime Environments**.
2. Expand the **Actions** menu for the Secure Agent, and select **Edit Secure Agent**.
3. In the **System Configuration Details** section, select the **Data Integration Server** service.
4. Select the **DTM** type.
5. Configure the following details:

Name	Value
JVMOption3	-DRefreshToken=<refresh token> **Note:** You can use the Azure service principal to generate the credentials needed to obtain a refresh token.
JVMOption4	-DSQLConnectionID=<SQL connection ID> **Note:** You can find the SQL connection ID in Microsoft Fabric.

6. To save the system configuration of the Secure Agent, click **OK**.

   The Secure Agent restarts automatically within 10 minutes. To apply the properties immediately, you can restart manually. To avoid failure of any running task, ensure that no tasks run .

Importing the parameter file

Import the list of user-defined parameters and their associated values for Cloud Data Integration mappings.

To import the parameter file, save the parameter file in the Secure Agent installation directory.

Copy the parameter file from the source directory to the target Secure Agent installation directory.

Source: `<Extracted extension package>\Secure Agent Files\Parameter Files\Informatica.param`

Target: `<Secure Agent Installation Directory>\apps\Data_Integration_Server\data\userparameters`

Optionally, if you want to use a configured path for the target location, see Parameter file location.

Running the jobs and taskflows

After you integrate MDM SaaS with Microsoft Fabric, you can run egress jobs.

On the **My Jobs** page, verify whether the egress job is successful.

After you run egress jobs, run the following Cloud Data Integration taskflows in Cloud Data Integration to publish data from the staging tables into the analytical dimension and fact tables in Microsoft Fabric:

- infa360_tf_fabric_customer_stage_fabric_retail_analytics
- infa360_tf_fabric_item_stage_fabric_retail_analytics
- infa360_tf_fabric_location_stage_fabric_retail_analytics
- infa360_tf_fabric_supplier_stage_fabric_retail_analytics
- infa360_tf_fabric_txn_stage_fabric_retail_analytics
